License expired though its not time / Number of servers exceeds maximum limit / How to flush license

25 admin November 19, 2026 License 17115

How do you resolve an expired license issue?

Overview: This article explains how to address issues related to an expired Ezeelogin license, including verifying IP addresses and server limits, and reloading the license to ensure proper functionality.

1. Error: License Expired!

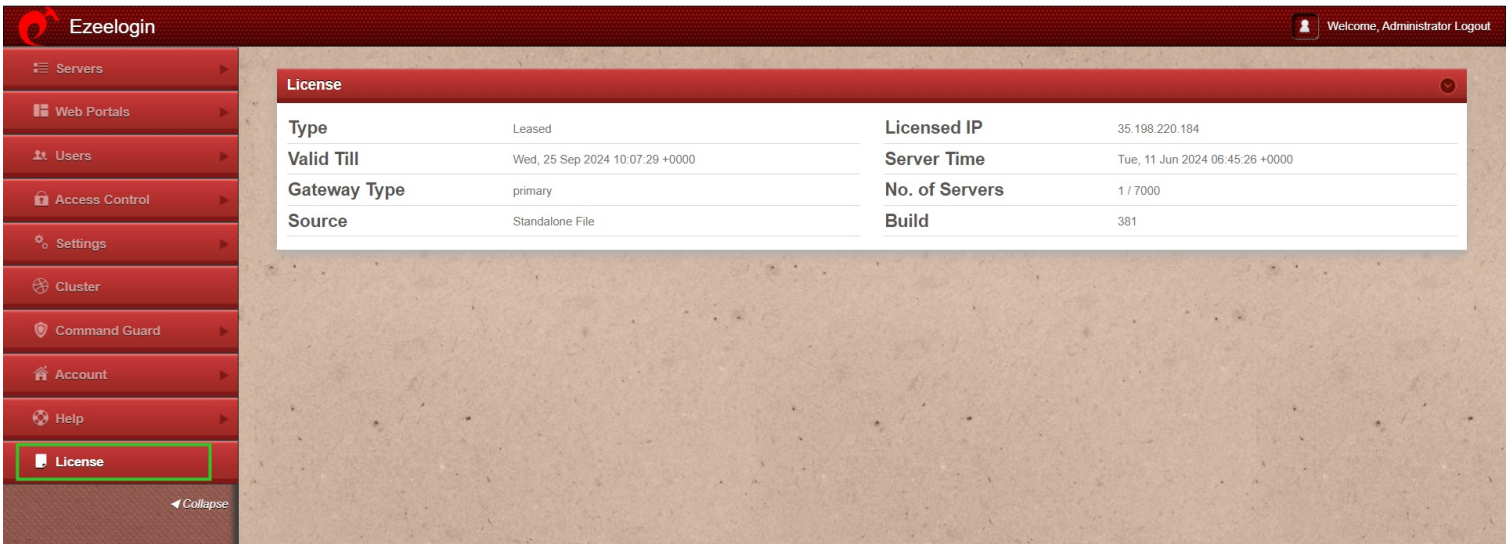
Step 1(A): Run the below command to find the public IP of the gateway server.

```
root@gateway:~# wget -qO- https://ezeelogin.com/myip
```

Step 1(B): Refer to the articles below to change the licensed IP from the billing portals.

> **Update the licensed IP from the new billing portal.**
>
> **Update the licensed IP from the old billing portal.**

Step 1(C): Relogin to Ezeelogin software GUI and click on the license tab to update the license. Refer to the screenshot below.



2. Error: The number of servers exceeds the maximum limit.

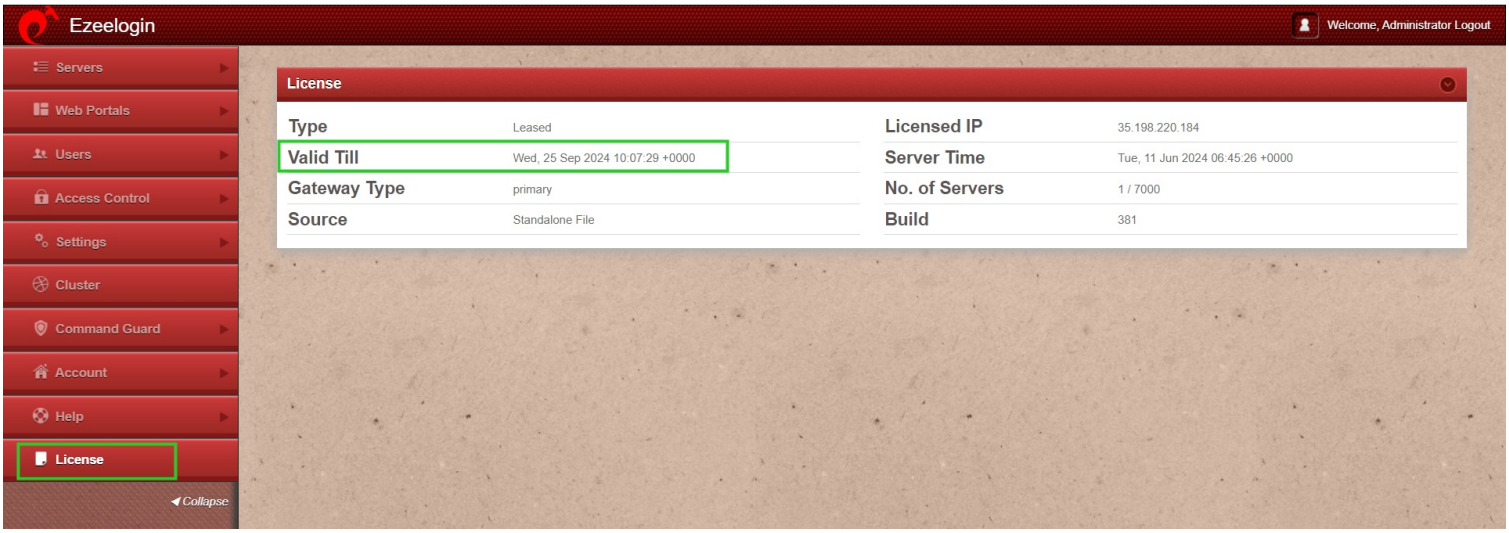
Step 2(A): Login to your billing portal and under the license tab > check whether the licensed number of servers is correct.

Step 2(B): Also, clear the browser cache and try to re-login to Ezeelogin web GUI and re-add the server.

---

3. How to flush/refresh the license for Ezeelogin Version 6 & 7

Step 3(A): Click on the license tab from the Ezeelogin software GUI to reload the license from the license server. This will help you automatically fetch the updated license from your billing portal that you have updated.



Step 3(B): Please run the following command on the gateway server to **clear the license cache from the database**.

Once the cache is cleared, log in to the GUI again and **click the License tab to fetch the updated license details**.

```
root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_settings set value='' where name='ezlel' "
```

Step 3(C): If the issue persists ensure the following things that are mentioned below:

Step 3C(i): Ensure the HTTPS traffic to **license.ezeelogin.com** is not blocked in your firewall. To check, run the below commands.

```
root@gateway:~# telnet license.ezeelogin.com 443

root@gateway:~# telnet license2.ezeelogin.com 443
```

OR

```
root@gateway:~# wget https://license.ezeelogin.com

root@gateway:~# wget https://license2.ezeelogin.com
```

Step 3C(ii): Additionally, ensure that **allow_url_fopen** is **enabled** in your PHP configuration.

```
root@gateway:~# php -i|grep fopen

allow_url_fopen => On => On
```

Contact **support** with any error messages you may have.
