Is Ezeelogin a hosted solution?

Overview: Ezeelogin offers a self-hosted SSH Jump server solution, providing control over installation on your server for enhanced security and customization.

Ezeelogin is not a hosted solution. Unlike hosted solutions, Ezeelogin needs to be installed on your designated server, which acts as the SSH gateway. This setup gives you complete control over your environment and ensures that all security measures meet your organization’s standards and requirements.

Benefits of Self-Hosting Ezeelogin

1. Enhanced Security: By hosting Ezeelogin on your own server, you maintain control over access, data security, and configurations, minimizing risks associated with external dependencies.

2. Customization: Tailor Ezeelogin settings to fit your specific security protocols and compliance needs, ensuring seamless integration with existing IT infrastructure.

3. Scalability: Scale Ezeelogin according to your organization's growth and operational demands without constraints typically associated with hosted solutions.
