Jump server ip to be licensed?

108 admin November 23, 2024 Getting Started 11575

How retrieve the IP address of the jumpserver?

Overview: This article describes how to obtain the IP address of your SSH jump server using a simple wget command, which is essential for purchasing or activating licenses and configuring services accurately.

Step 1: Run the following command on the SSH gateway server where you wish to install Ezeelogin and get the license for the IP displayed in the output.:

```
root@gateway:~# wget -qO- https://ezeelogin.com/myip

                OR

root@gateway:~# curl ifconfig.me
```

Make a note of the IP address shown in the command output. This IP address is the one for which you will need to activate a **license**, depending on your requirements.
