Will Ezeelogin work behind a firewall or NAT or behind a Proxy?

Yes, Ezeelogin would work behind a firewall , NAT or a proxy. It would need to establish a connection to **license.ezeelogin.com** on port 443 to fetch the license.

Run the command on the ssh gateway server and it would show the ip for which the license has to be issued if your ssh gateway is behind a NAT.

If you are behind a proxy, you can specify the proxy host details as parameter to the install script

Example:

In the web panel, you can specify the proxy host details under the following tab.

Settings -> **General** -> **Miscellaneous (Tab)**

Enter Proxy host, username, port, password

ezeelogin   Welcome, **manu** Logout

General Settings   Authentication   Two Factor Authentication   Security   Defaults   **Miscellaneous**
