How to Configure Google 2FA (Two-Factor Authentication) in Ezeelogin?

Overview: This article explains how to enable, share, and reuse Google 2FA in Ezeelogin, addressing API deprecation issues, and synchronizing server time. It also covers methods to disable Google 2FA through both the GUI and backend commands.

1. How to enable Google 2FA (Two-factor Authentication) in Ezeelogin?

The QR code generation feature is currently affected by the deprecation of the Google Image Charts API, which ceased operation on March 14, 2024. To address this, kindly <u>update</u> to Ezeelogin version 7.37.5.

Step 1(A): Navigate to **Settings -> General -> Two Factor Authentication -> Enable Google Authenticator**.

| Ezeelogin | | Welcome, Administrator Logout |
|----------------------------------|--|--|
| E Servers | General Settings | Authentication Two Factor Authentication Security Defaults Miscellaneous |
| 📕 Web Portals | Enable Google Authenticator 🔍 | Enable Yubikey 🛛 |
| 11 Users | | |
| Access Control | Enable Duo 😧 | Enable Access Keyword 🗑 |
| °₀ Settings 🛛 🔻 | × | × |
| General | Enable Radius V | Force Two Factor Authentication |
| Branding Control Panels | Yubico Client ID @ Get Yubico API Key | Yubico Secret Key 🗑 |
| Data Centers | | |
| ► API | YubiKey Sync Level 😡 | DUO Integration key 🥹 |
| ► SAML | 0 | |
| RADIUS Server Fields | DUO Secret key | DUO API hostname |
| A Cluster | Allow Reuse Of Google Authenticator Code 😡 | Use Email ID for Duo login |
| Command Guard | | × |
| Command Guard | Skip Two Factor Authentication For SAML | Cancel Save |
| Account | | |
| | Skip LDAP User Verification | |

Step 1(B): After enabling Google Authenticator refresh the Ezeelogin Software GUI and navigate to **Account -> Google Authenticator.**

Click on the 'Set 'button and scan the QR code with the Google Authenticator App.

Download Google Authenticator Application from Appstore/play store for ios/android and install it on your phone.

Step 1(D): Re-login to web GUI using Google 2fa

Step 1(E): The backend 2fa method will also be now using Google Authenticator.

Ensure that the time on the Jump server is accurate. Use the command #ntpdate pool.ntp.org to sync

the server time. Also, do ensure that the mobile phone times are also in sync with your mobile operator's time.

2. How to share the same Google authenticator code with different users?

Step 2(A): Login to GUI, and enable Google authenticator 2FA from settings. Navigate to the Accounts tab -> Google authenticator -> Set -> Copy the secret and share it with other users. Now all the users with the same secret can log in to both GUI and shell with the same Google code.

| ► SCP Log | |
| 🛇 Help 🕨 🕨 | |

3. How to reuse Google Authenticator Code?

Step 3(A): By default, the google authenticator code is invalidated after one-time use.

Step 3(B): To reuse the Google authenticator code, login to Ezeelogin GUI, navigate to Settings ->

General -> Two Factor Authentication -> Enable Allow Reuse Of Google Authenticator Code.

This ensures that the same Google Authenticator codes can be used for authenticating in both the Ezeelogin GUI and Ezeelogin backend (ezsh) till the code expires.

Google Authenticator does not require any internet connection.

Emergency CLI Method:

Run the below commands to disable and clear Google authenticator. Replace username to disable Google authenticator for that user.

root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_settings set value='N' where(name='enable_google_authenticator')"

root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_users set egs=NULL where username='ezadmin'"

No Two-factor Authentication enabled

This error happens when we enforce Two-Factor authentication without enabling any of the Two-Factor authentications. Run the following command to disable Force Two Factor Authentication.

root@gateway:~#php /usr/local/ezlogin/ez_queryrunner.php
"update prefix_settings SET value = 0 WHERE name
_ 'two_factor_auth'"

root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_usergroups
SET force_tfa = 'N'"
