Stream SSH sessions in real-time

Overview: This article provide step by step instructions to stream the SSH sessions of gateway users in real time by enabling streaming with time interval settings.

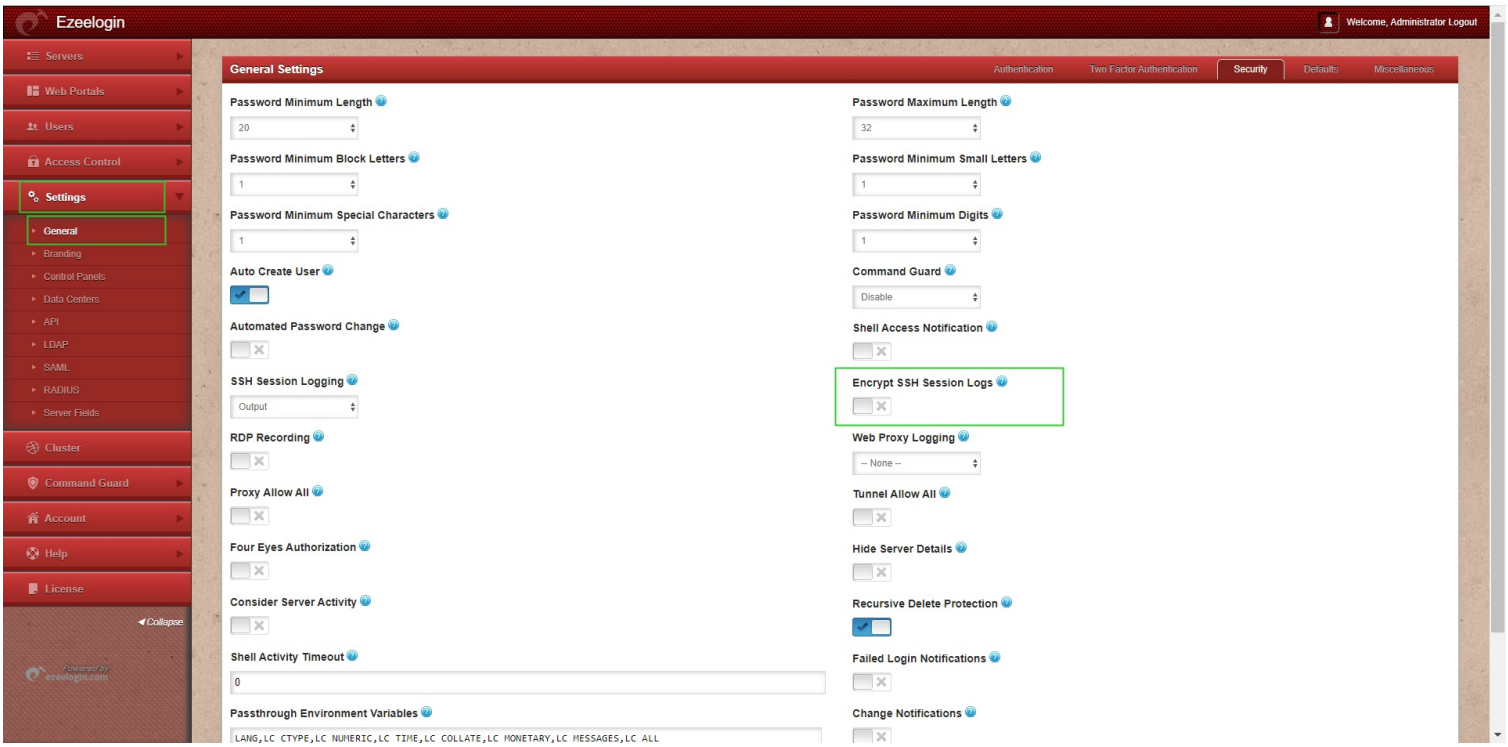

Step 1: Login to Ezeelogin GUI, navigate to **Users** -> **SSH log** and click on the **View** button. If the tab is not visible then ensure that the user has the privileges to view the SSH Log in Access Control.

Step 2: Click on the '**Enable streaming button**' and set the **interval** for streaming.

Step 3: Ensure that '**Encrypt SSH Session Logs**' is disabled in **Settings** -> **General** -> **Security** for live streaming to work.

SSH Live streaming is possible only for ongoing ssh sessions.
SSH Live streaming is possible only if '**SSH Log Encryption**' is **disabled**.

FAQ

1. Why are SSH log files (**Users → SSH Logs** in the Ezeelogin GUI) still present after deletion from the web interface?

Deleting log entries from the Ezeelogin web interface only removes the metadata from the database. The actual log files stored on the filesystem under /var/log/ezlogin/ are not deleted.

To restore the metadata for these logs back into the web interface, use the following command:

```
root@gateway:/usr/local/ezlogin/eztool.php -reimport_logs
```

This command re-imports the log metadata from the log files that still exist on disk.

2. Is there any impact if the logs in /var/log/ezlogin/ are deleted?

No, the logs in /var/log/ezlogin/ can be safely deleted without affecting system functionality. However, once deleted, these logs cannot be recovered.
