Internal command ezinfo or ezlist does not work even though i am in the admins group.

161 admin October 5, 2024 Common Errors & Troubleshooting, Features & Functionalities 11270

Internal commands like ezinfo or ezlist work only for the admin user created at the time of installation and have to be explicitly granted to other users belonging to the *Admins* group or Users belonging to other User groups.

Grant the user View Server Details in ACL for the internal command to work.
