Configure four eyes authorization

165 admin October 15, 2025 Security Features, Two Factor Authentication (2FA) 10922

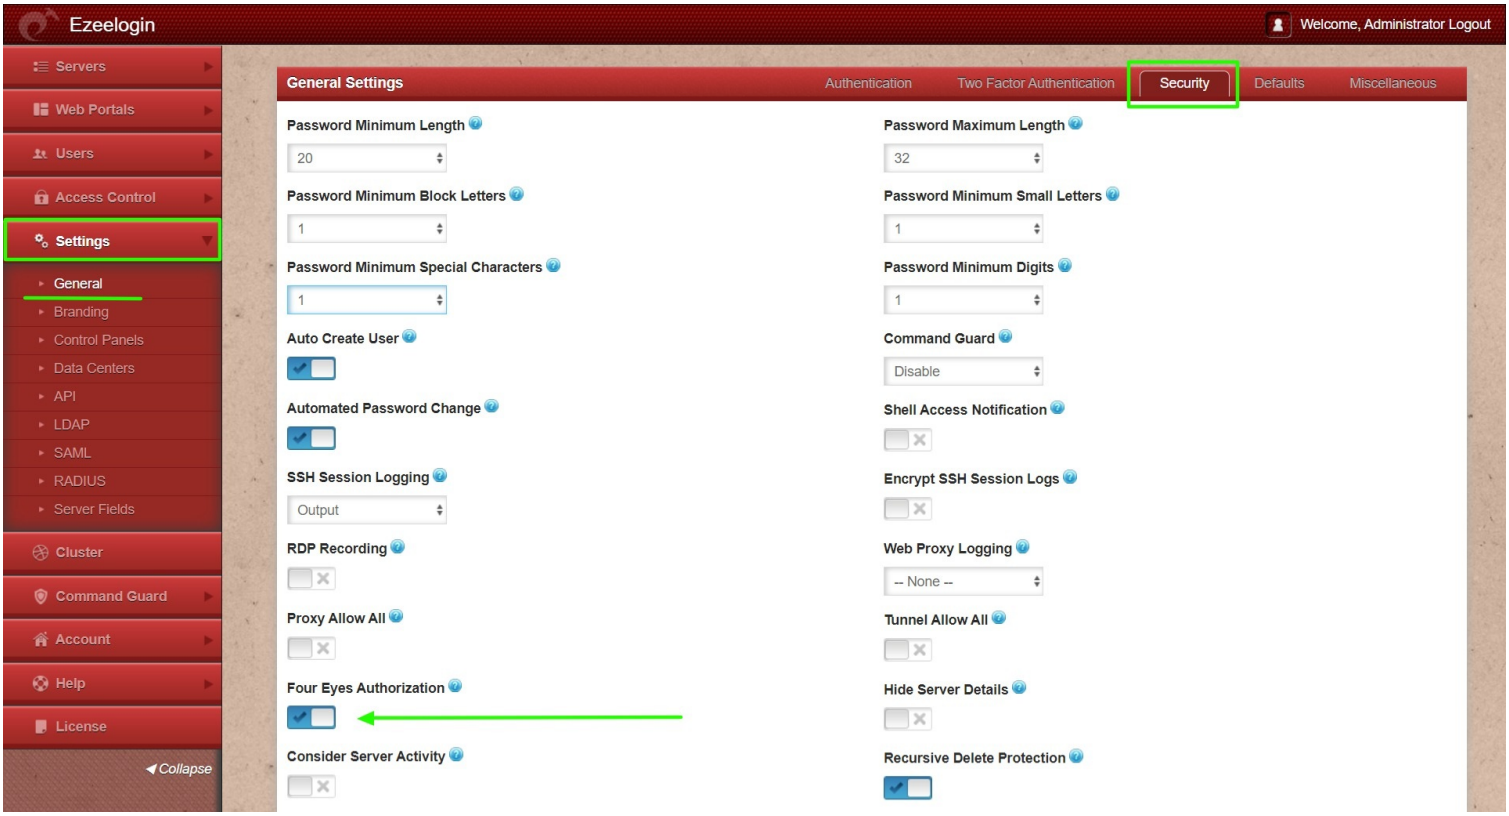

How to configure Four eyes authorization in Ezeelogin?

Overview: This article helps Ezeelogin admin users in configuring four-eye authorization so that the gateway user would have to be authorized by another user with four eyes authorization privilege in access control to view the SSH logs of any user.

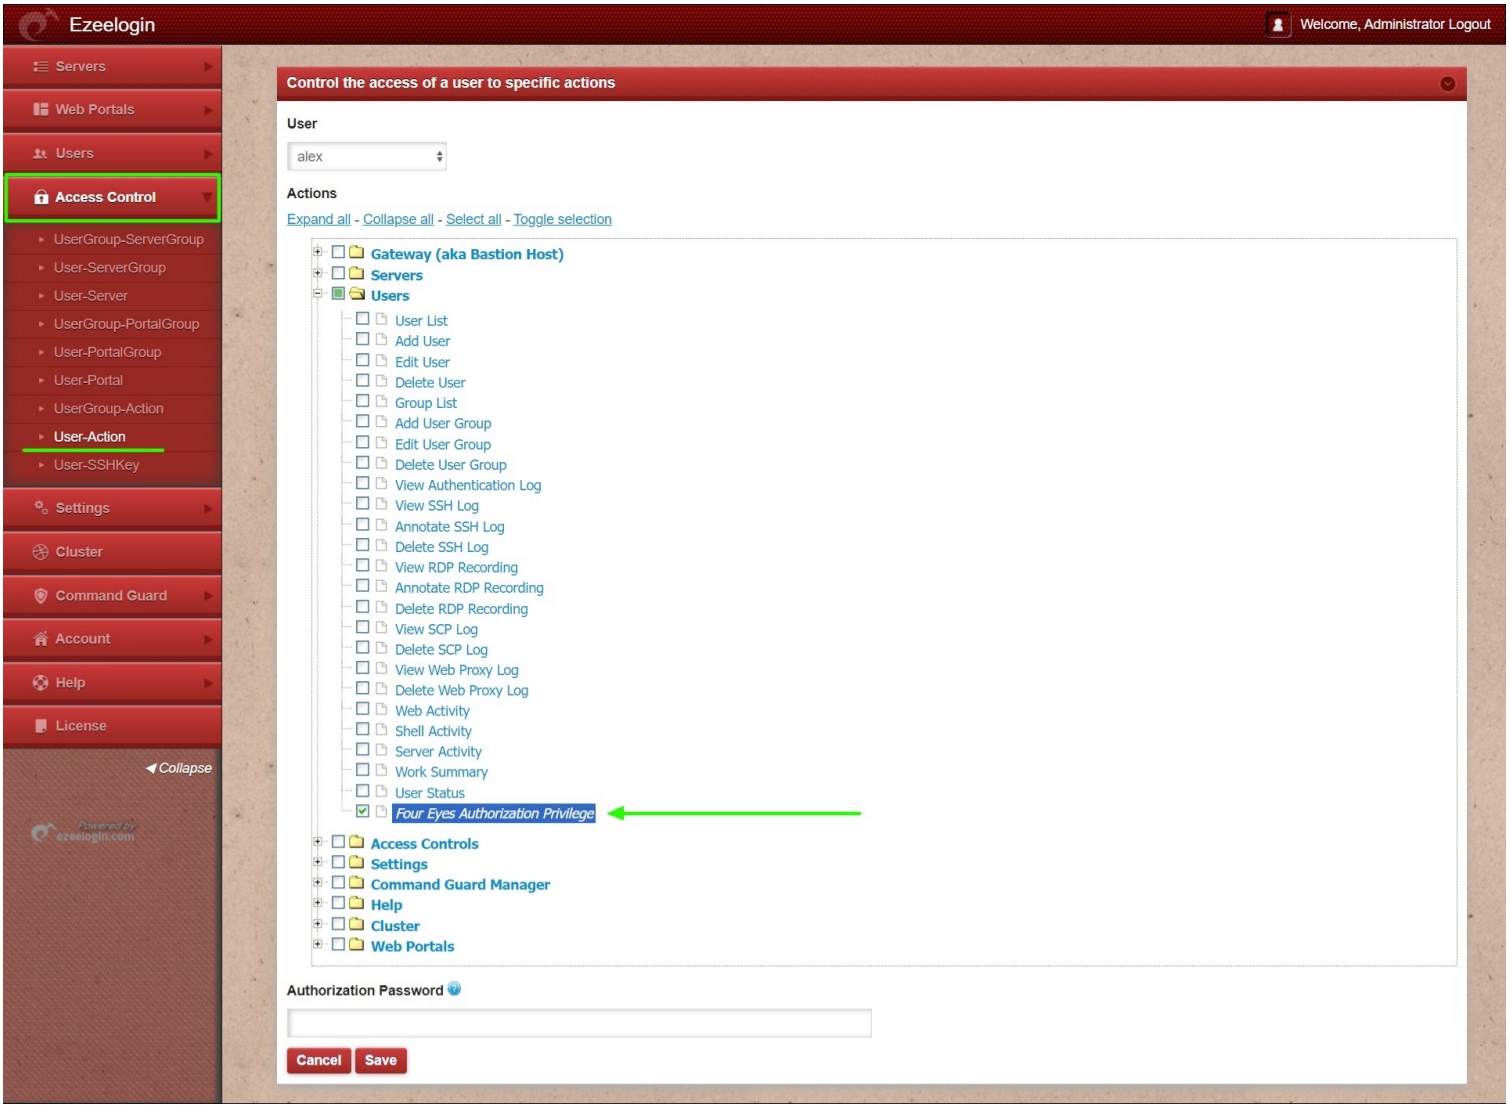

Note:

Four-eye authorization in Ezeelogin is used to view the SSH recordings of any user with only two-factor authentication.

Step 1: Login to **Ezeelogin GUI** -> **Settings** -> **General** -> **Security** -> **Four eyes authorization**

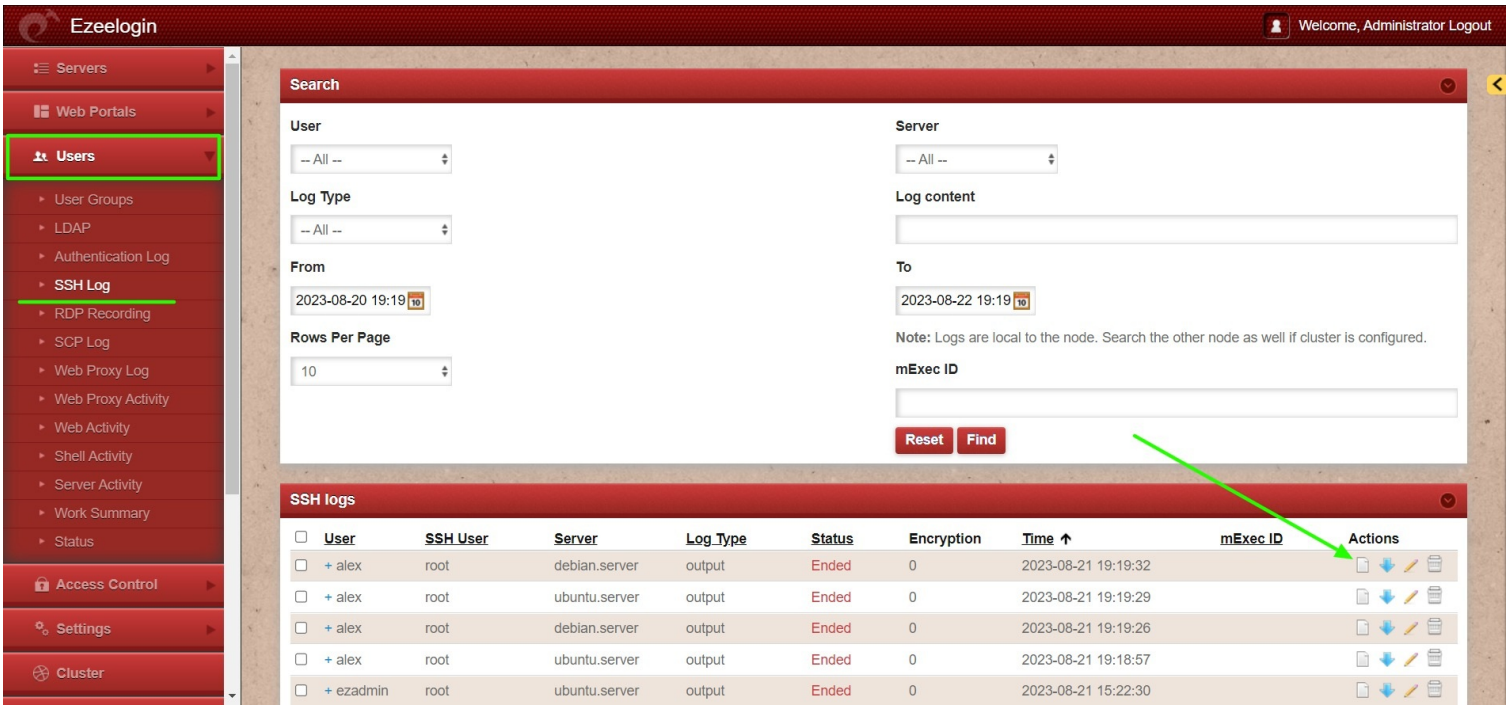

Step 2: Make sure Four Eyes Authorization Privilege is enabled for the user who would be granting access to view ssh logs. Go to **Access Control**-> **User-Action** and grant the user **Four Eye Authorization Privilege**.

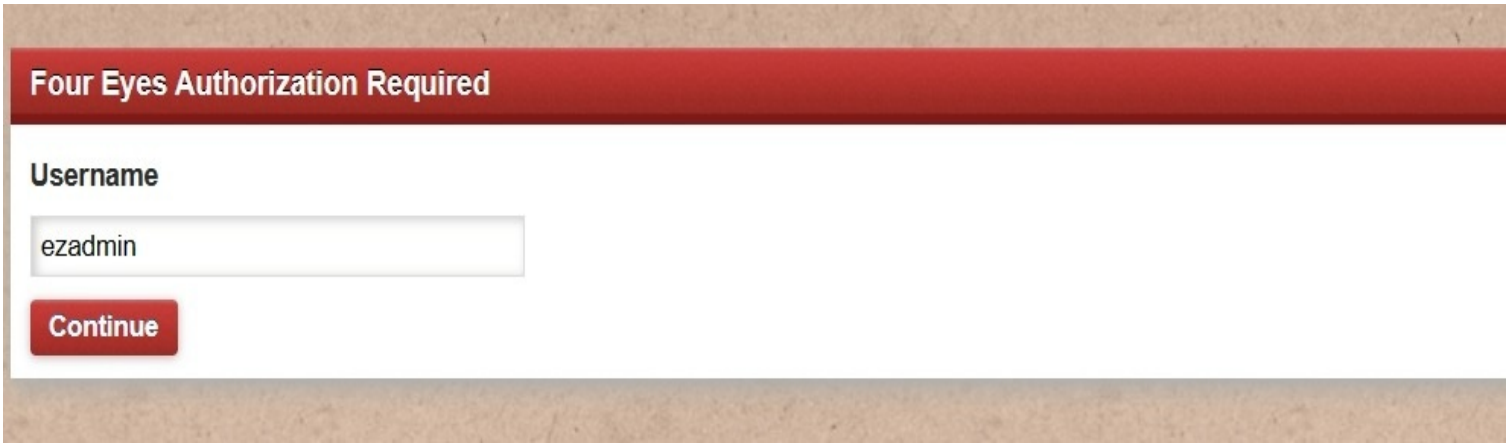

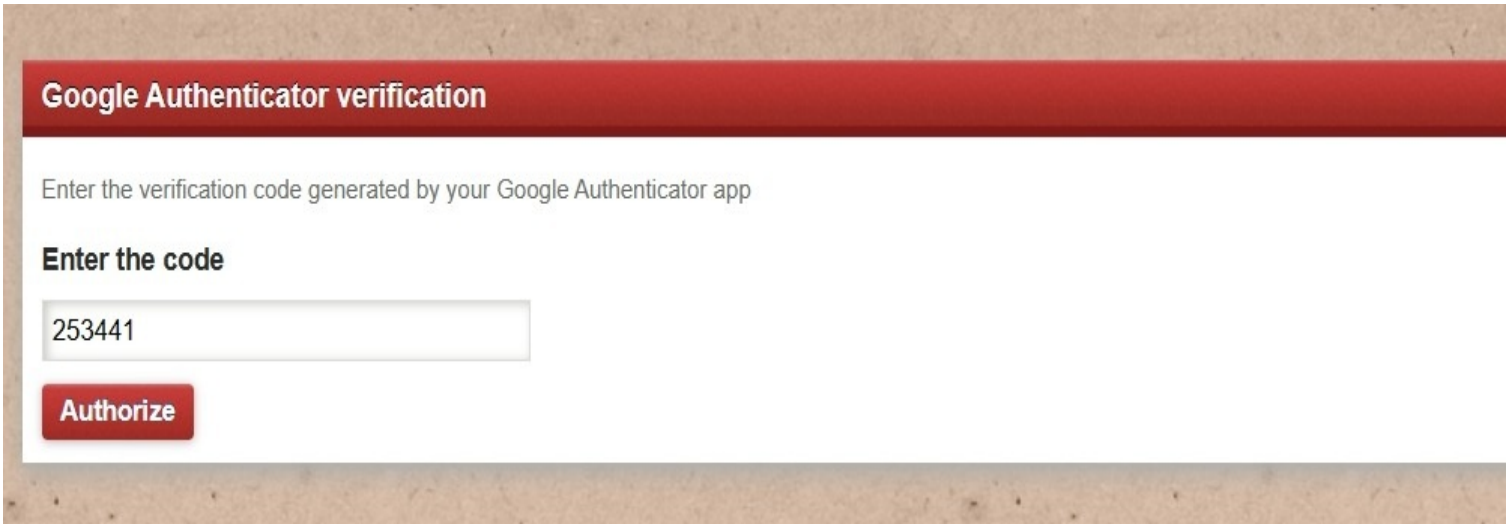

Step 3: Ensure that one of the **two-factor authentication** methods **Authenticator applications**, **Yubikey**, or **DUO Security** is configured for the four eyes authorizing user. Refer below example to setup any authenticator applications.

Step 4: After configuring four eyes authorization, for viewing ssh logs, navigate to **Users** -> **SSH Logs** -> **select user and server** -> **View SSH Log**

Step 5: To view the SSH logs, the **name** and **two-factor code** of the user with **four-eye authorization privileges** must be entered.

Step 6: The user will now be able to view the SSH log with four eyes authorization.
