

SSH Key rotation to remote servers

167 admin February 3, 2024 [Migration & Maintenance](#), [Security Features](#) 9270

How to rotate the Ezeelogin key pair from Gateway to remote servers?

Note:

- The generated private key would be encrypted and cannot be retrieved.
- The maximum supported private key size would be 4192 bits.

How to rotate the key pair from the Ezeelogin server to the Remote servers?

Synopsis: To regenerate the key manually, First, we will run the command to regenerate the key, followed by which we will open the parallel shell simultaneously and run the highlighted key in a parallel shell that we'll receive while regenerating a key (we'll be copying the newly generated key on remote servers). And later press Enter and Check the Global key from GUI to confirm the changes.

Step 1. To generate the new **4192-bit key pair** in the **Ezeelogin jump host installation**, run the following command on the gateway server.

```
root@gateway ~]# /usr/local/ezlogin/eztool.php -regenerate_ssh_key
```

Step 2. Run the highlighted command using the [parallel shell](#) to copy the new public key to all servers.

The idea would be to copy the newly generated public key to **/root/.ssh/authorized_keys** on the remote servers.

```
#####  
  
# Ezeelogin Tool #  
  
#####  
  
Checking environment... done  
  
Checking license... done  
  
Enter Ezeelogin administrator password: admin1234  
  
Regenerate SSH key pair...  
  
- New SSH key pair generated. Execute the following command on all remote servers using parallel shell  
feature to add the new public key in authorized keys:  
  
echo 'ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQDEaoCRxkhNdOrZk6olp+eh1Rm  
Vjr1HDHZmDyFkkNZnfZS/KXQAFPMtL3lJ9F7H4H498FQdU7wyFJLd+m00SjaYoo

jACae8GaSF48JZ23cCElV2VF7AkMudFgHCb1h5/29y/ATTzZk  
  
IFilow== ezlogin' >> ~/.ssh/authorized_keys
```

NOTE:

You should execute the above command on all remote servers using the [parallel shell feature](#) to add the new public key in authorized keys and Wait for the parallel shell execution to complete before pressing any key to return to the command line.

After it is done, press enter key to continue...

Step 3. Wait for the **parallel shell execution to complete** before pressing any key to return to the command line.

This will ensure that the **new public_key** is copied across all servers.

```
[group:All servers]# echo 'ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQDEaoCRxkhNd0rZk6oIp+eh1RmVjrLHDHZmDyFkkNZfZS/KXQAFPMtL3LJ9F7H4H498FQdU7myFJLd+m00SjaYoolNx
