Default outbound ssh port for target servers added in

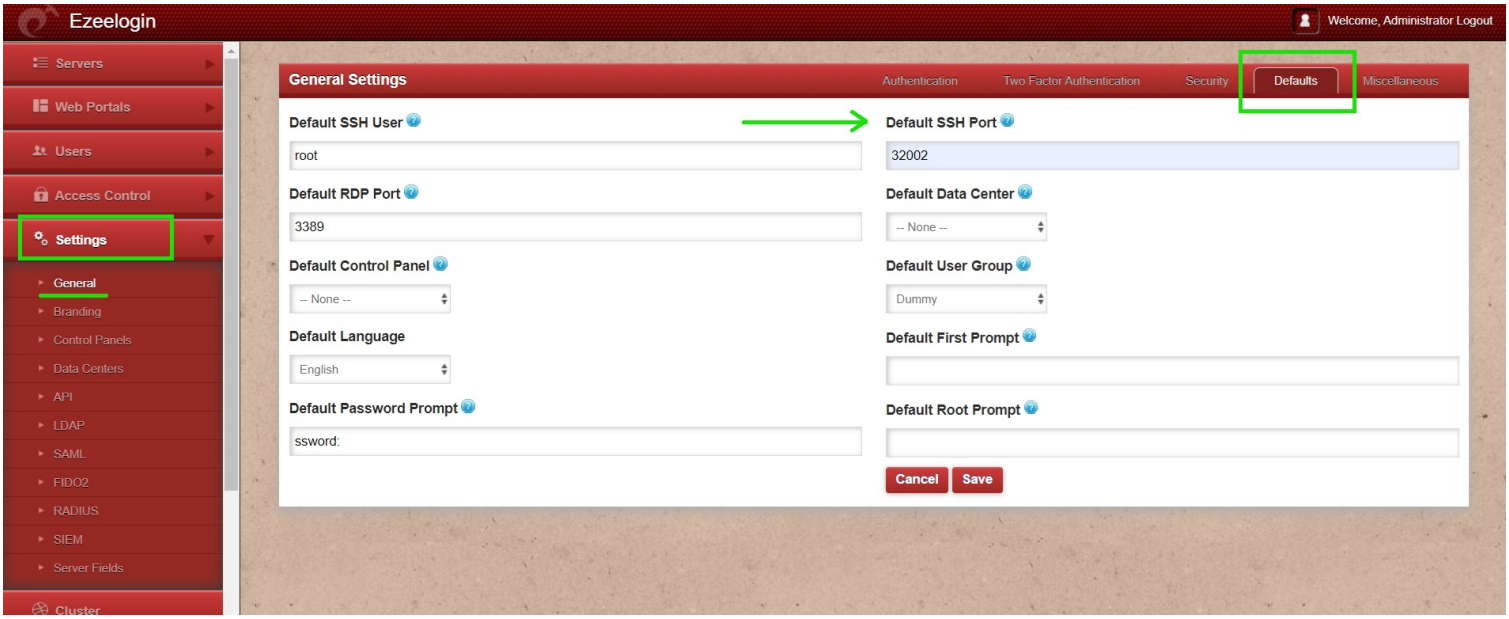

174 admin October 6, 2024 Tweaks & Configuration 7750

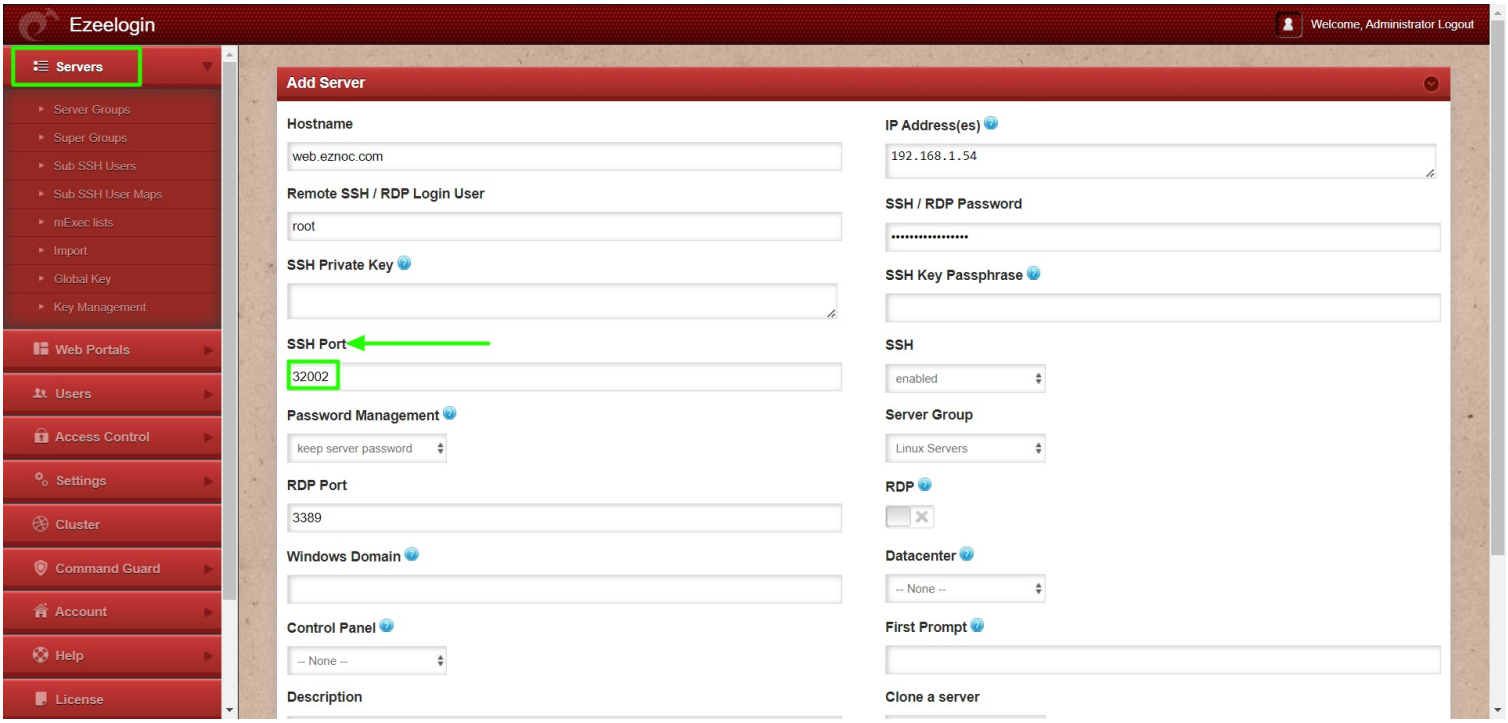

How to set default SSH port for target servers?

Overview: This article helps admin privilged users to set up default SSH port for added target servers so that the SSH port is auto-filled in server add forms. This is helpful when you set a non-standard SSH port commonly for all your servers.

Step 1: To setup default SSH port navigate to **Settings** -> **General** -> **Defaults** -> **Defaults SSH Port.**

For example, if you are using a custom SSH port **32002** for your fleet of servers, then change the **Default SSH Port** variable to 32002 so that this SSH port is auto-filled in server add forms.
