# How to enforce 2 Factor Authentication on user login?

238 admin October 12, 2024 <u>Features & Functionalities</u>, <u>Security Features</u>, <u>Two Factor</u> <u>Authentication (2FA)</u> 11503

## Enforce 2fa on user login

**Overview:** This article provides an overview of <u>Two-Factor Authentication (2FA)</u> implementation options: enforcing 2FA globally for SSH and web interfaces, and selectively for user groups, along with configuration instructions and method setup details.

You have two options for implementing Two-Factor Authentication (2FA) for user logins:

1. Enable 2FA for all users globally.

2. Implement Two-Factor Authentication (2FA) for designated user groups as per their specific requirements and access levels.

#### 1. Enable 2FA for all users globally.

Enable the **force 2fa** to enforce <u>Two-Factor Authentication (2FA)</u> for both Ezeelogin backend (ezsh) and the web interface, requiring all users to use 2FA globally for added security.

Step 1(A): Under Settings -> General -> Two-factor authentication -> enable force 2fa.

Ezeelogin			Welcome, Administrator Lo

► LDAP ► SAML	1	0	
► RADIUS		DUO Secret key	DUO API hostname
► SIEM			
<ul> <li>Server Fields</li> </ul>		Allow Reuse Of Google Authenticator Code 🐵	Use Email ID for Duo login
🛞 Cluster		×	
💿 Command Guard 🔹 🕨	×	Skip Two Factor Authentication For SAML 🞯	Cancel Save

## 2. Implement Two-Factor Authentication (2FA) for designated user groups

It is possible to activate mandatory Two-Factor Authentication (2FA) selectively for specific user groups based on particular requirements.

Step 2(A): Under Users -> User Groups -> Select the user group -> enable force 2fa -> save

Ezeelogin			Velcome, Administrator Logout

Relogin, into the Ezeelogin GUI, and the user will be prompted to set up the 2-factor method if he hasn't set up any. Set up any 2fa method of your choice from here.

Two Factor Authentication Method

To configure additional <u>Two-Factor Authentication (2FA)</u> methods, log in to the WebGUI and navigate to the **accounts tab** to set up **multiple 2FA** options..

Ezeelogin		👔 Welcome, johr

	N. A.	Cancel Save
		and the second

We have set up Google 2fa and Access Keyword successfully and will be prompted for it. In the example below, we are using <u>Google 2fa</u> to log in, and hence the same would be prompted in the backend shell as well.

Google Authenticator verification
Enter the verification code generated by your Google Authenticator app 267253
Verify

The Ezeelogin backend would look as follows.

- The 2-factor mechanism used for the last login into the WebGUI would be the 2fa method in use in the backend. To change, the 2fa method in use in the backend, log into the WebGUI using the new 2fa method so that it becomes the default 2fa method for the backend.
- The two-factor Authentication tab is available only from version **7.11.0**. If you are running an old version, then 2fa methods configured under **Settings** -> **General** -> **Security** tab will be available.
