Connecting to a remote server managed by ezeelogin using PUTTY

Overview: This article describes how to connect to a remote server managed by Ezeelogin using PuTTY.

Step 1: Open PuTTY and enter the **Ezeelogin/Jumpserver IP or Hostname** along with the **Port number**. Click "**Open**" to initiate the connection.

Step 2. Provide your Ezeelogin **username and password** when prompted.

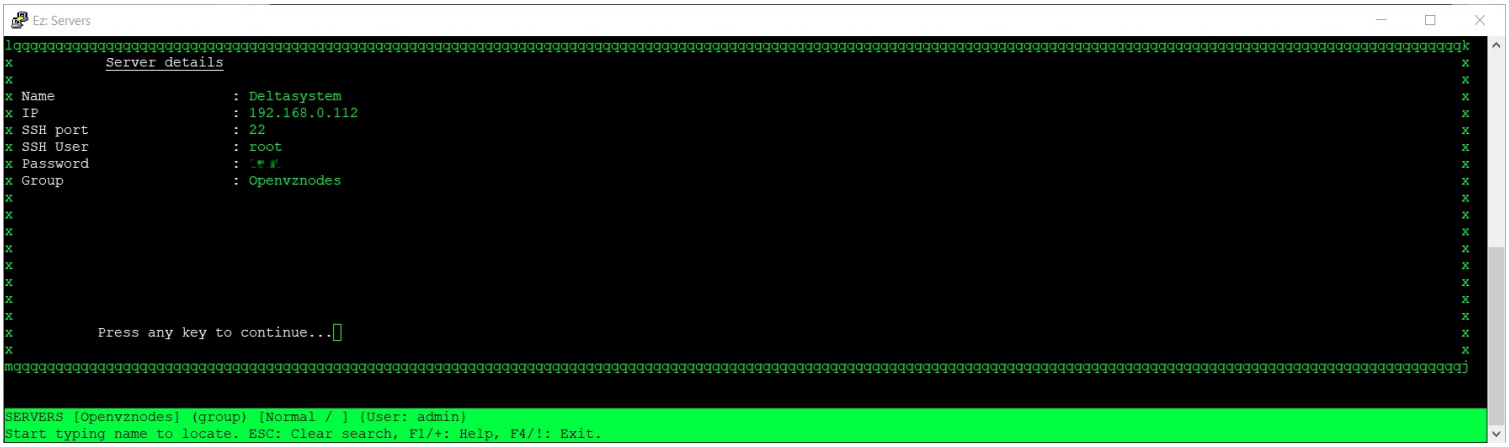

Step 3. If enabled, **enter the Security code or complete Two Factor Authentication** to access the Ezeelogin shell (ezsh).

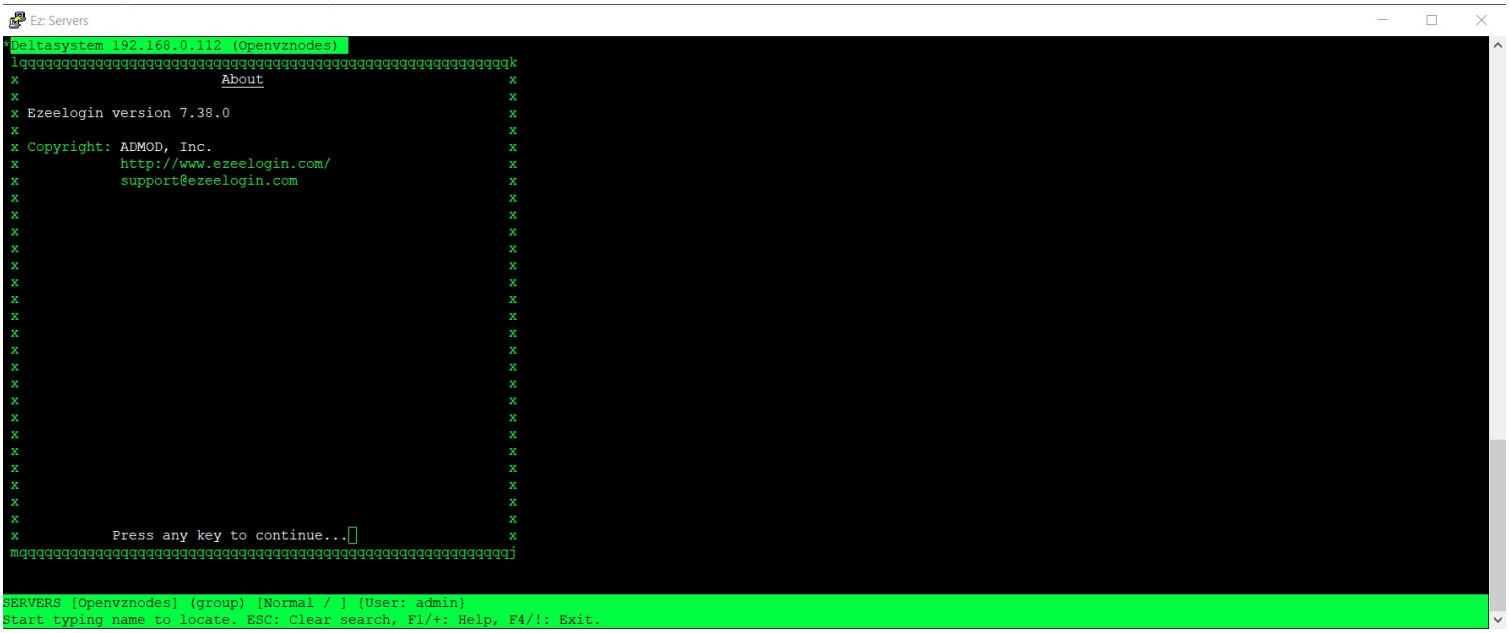

Step 4. Upon successful authentication, you will enter the Ezeelogin shell (ezsh). The initial screen displays a **list of server groups**. Navigate through the list using **arrow keys** and **press Enter to select a server**.

Step 5. Use the **Tab key** to view detailed information about the selected server (refer to the screenshot for guidance).

Step 6. You can also **press ' | '**from the **server group lists/server lists** to know the details of Ezeelogin.

Step 7. Select and press enter to log into any server and you will be logged into a remote server via Ezeelogin.
