Manually installing ezeelogin with binary package

Overview: This article describes how to manually download and install Ezeelogin using a binary package, providing steps to resolve the issue of not being able to download the package directly.

Step 1. Manually download the binary package file from here as follows:

```
root@gateway:~# wget https://downloads.ezeelogin.com/bins/ezlogin_7.x.x_bins_Linux.tar.bz2
```

Step 2. After downloading the above package, you can install Ezeelogin using the following command.

```
root@gateway:~# sh ezlogin_7.x.x_phpxx.bin -- -usebin /root/ezlogin_7.x.x_bins_Linux.tar.bz2
```

Make sure to give the complete or actual path of the binary package file.

(In the above command /root/ezlogin_7.**x.x**_bins_Linux.tar.bz2 is the complete path file of the binary package)
