Fixing "class 'DOMDocument' not found" error in ezeelogin

Overview: This article explains how to resolve the "DOM extension" error by installing the required PHP DOM extension. On Debian/Ubuntu, use apt-get install php-dom/php-xml. On CentOS/Fedora/Red Hat, use yum install php-xml. If there are conflicts between PHP versions, try php53-xml. After installation, restart the web server: service apache2 restart on Ubuntu and service httpd restart on CentOS.

Step1. If you are get the error, you need to install the [DOM](#) extension. You can do so on Debian / Ubuntu using:

```
root@ubuntu:~# apt-get install php-dom/php-xml
```

And on Centos / Fedora / Red Hat.

```
root@localhost:~# yum install php-xml
```

php-xml package exists between PHP 5 and PHP 5.3 packages, you could try to see if the
On CentOS/Fedora/Red Hat

```
yum list installed | grep php53-xml
```

On Debian/Ubuntu

```
dpkg -l | grep php53-xml
```

Restart the web server after installing Dom extensions,
In Ubuntu

```
root@ubuntu:~# service apache2 restart
```

In Centos

```
root@localhost:~ service httpd restart
```
