

How to change the default backup directory of Ezeelogin installation ?

296 Riya Francis August 28, 2024 [Technical](#) 3902

Change the default backup directory

To change the default backup directory while running the Ezeelogin backup script **backup_ezlogin.php**, use the "**-out**" parameter with the backup script followed by the specified directory. Include the trailing **slash (/)** at the end of the directory path

```
:~# php /usr/local/sbin/backup_ezlogin.php -out /backup_directory/
```
