Set SSH gateway user password lifetime

297 admin July 22, 2025 Features & Functionalities 9052

Option for setting SSH gateway user password expiration

Overview: This article explains the SSH Gateway User Password Lifetime feature, which allows you to set an **expiry date** for **user passwords**. A **value of 0** indicates that passwords **never expire**, while a **value like 30** enforces a **reset every 30 days**. Configuration is done through "**settings -> general -> set user password lifetime**.

The SSH Gateway User Password Lifetime feature lets you **set an expiry date** for the **user password**. The user has to set a **new password** to login again **after its expiry**. This is useful for organizations to force their employees to **rotate the password** of their account periodically as required by various security compliances followed.

Step 1: To force the gateway user to reset the password after **30 days**, navigate to **Settings -> General -> Authentication -> User Password Lifetime** and enter the value **30.**

Note: A value of **0** indicates that passwords **never expire**, while a value like **30** enforces gateway user to reset password **every 30 day**s.
