How to prevent putty window from closing during ssh

305 admin August 28, 2024 Common Errors & Troubleshooting, General 46858

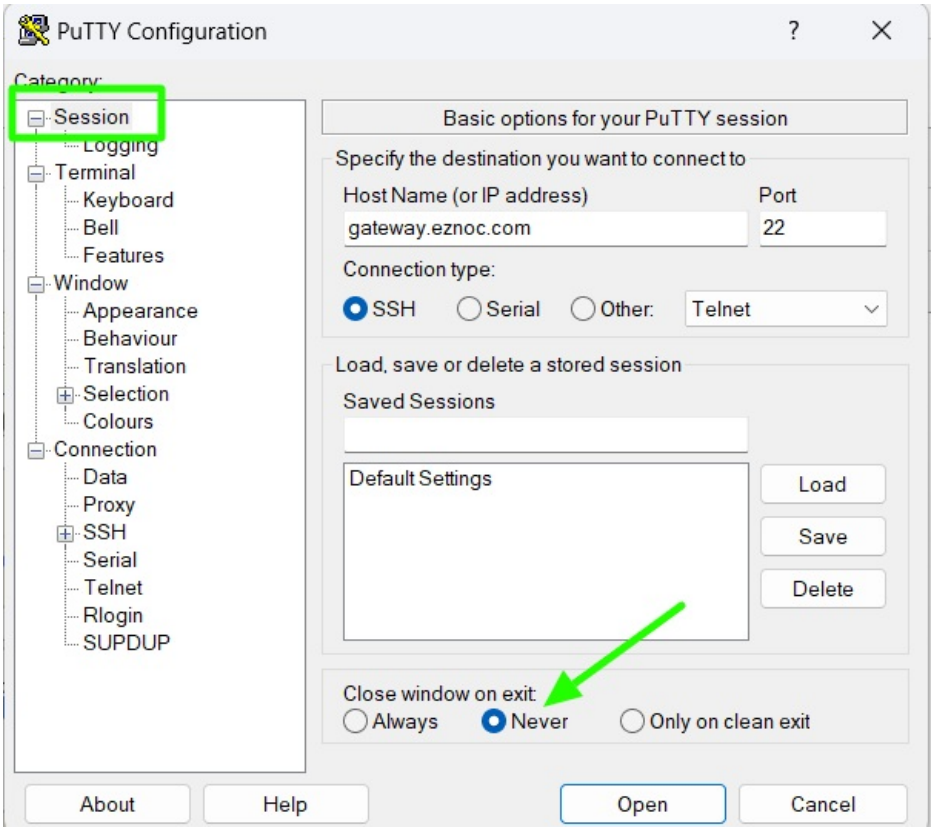

Prevent PuTTY window from closing during an SSH session and display the error message?

Overview: This article explains how to prevent PuTTY windows from closing during an SSH session if there is any error on the server side.

By default, PuTTY window will close during an SSH session if an error occurs on the server side, without displaying the error message explaining why the session failed.

Step 1: To prevent PuTTY window from closing during an SSH session and to view the error message on the server side, set '**Close Window on exit**' to '**Never**' under the **session** tab. This is useful in troubleshooting SSH failure while accessing a remote server.
