LICENSE ERROR: Could not resolve host: license.ezeelogin.com (after migrating a standalone license)

Overview: This article addresses the Could not resolve host: license.ezeelogin.com error encountered in the Ezeelogin GUI after migrating a standalone license. Ensure the lic.dat file is present in the /usr/local/etc/ezlogin/ folder. Check the file with ls -al /usr/local/etc/ezlogin/*.dat and copy it from the old server using scp.

If you are getting the above error on the license tab of Ezeelogin GUI after migrating the standalone license, make sure that there is **lic.dat** file in the **/usr/local/etc/ezlogin/** folder.

To check if the file is there:

```
root@new-gateway:# ls -al  /usr/local/etc/ezlogin/*.dat
```

Follow the step to copy the license file from the old server to new

```
root@old-gateway:# scp /usr/local/etc/ezlogin/lic.dat root@new-gateway-ip:/usr/local/etc/ezlogin/lic.dat
```
