

function keys in htop command not working in putty

380 admin June 7, 2021 [Common Errors & Troubleshooting](#) 4646

The Function keys (F1,--F9) in Linux command htop is not responding. To resolve this, make sure to set the " *Terminal Emulation* " function to " *Auto* " under " *Account* -> *Preferences* -> *Terminal Emulation* "

Once the, Terminal Emulation is set correctly, the fn keys in command htop will start to respond correctly in ezsh shell while using Putty.

[illegible]

Also, if you still continue to have issues with the Fn keys, do refer the [article](#) to modify the setting in Putty under **Terminal > Keyboard** . Change the " **Function keys and keypad**" setting to "**Xterm R6**" .

To change terminal emulation for all users from the database. Refer this [article](#).
