

# Error: User with the email does not exist, but with the username exists

405 Nesvin KN July 31, 2024 [Common Errors & Troubleshooting](#) 3188

## How to fix error (SAML): User with the email does not exist, but with the username exists

**Overview:** This article describes how to fix the "User with the email does not exist" [SAML](#) error by ensuring the email address matches between Ezeelogin and AWS SSO.

1. Refer below example of creating a new user in AWS SSO. Add user details in [AWS](#) or verify the user details.

The screenshot shows the AWS IAM console 'Add user' page. The 'User details' tab is selected. The form contains the following fields:

- Username\***: steve (Note: This username will be required to sign in to the user portal. This cannot be changed later.)
- Password**: ☒ Send an email to the user with password setup instructions. [Learn more](#) ☐ Generate a one-time password that you can share with the user. [Learn more](#)
- Email address\***: steve@ezeelogin.com
- Confirm email address\***: steve@ezeelogin.com
- First name\***: Steve
- Last name\***: Irvin
- Display name\***: Steve Irvin

Below the main form are three optional sections: Contact methods (optional), Job-related information (optional), and Address (optional). At the bottom right, there are 'Cancel' and 'Next: Groups' buttons. Red arrows highlight the 'Username\*', 'Email address\*', and 'Next: Groups' button.

**Note:** Provide the same Email address in both Ezeelogin and AWS SSO.

2. Refer to the below example of user edit in Ezeelogin.

**Ezeelogin**

Servers

Web Portals
