How does " Web Activity" in Ezeelogin works?

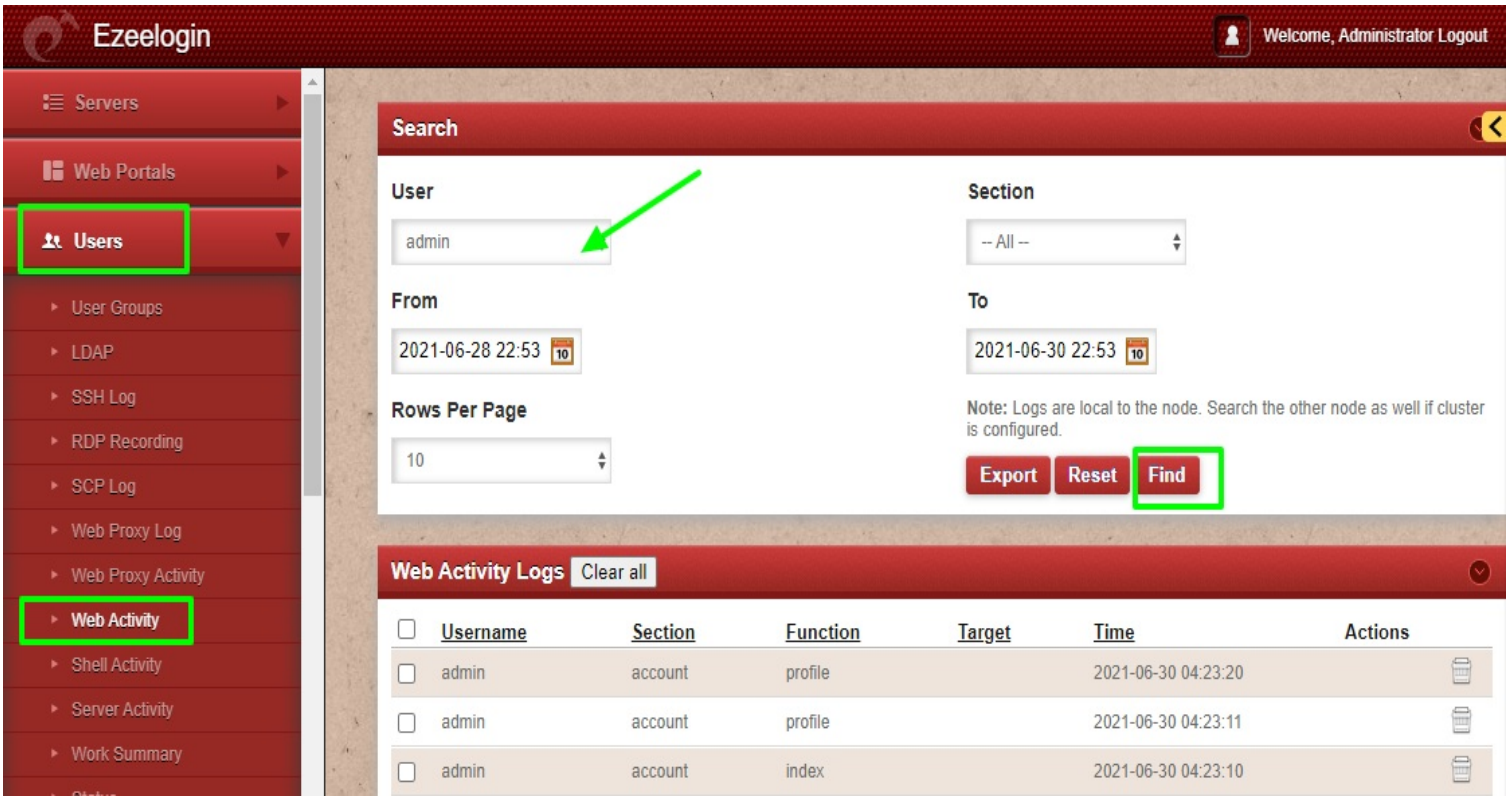

410 admin May 27, 2026 General 5359

How to find "Web Activity" logs or how to export Web Activity logs in Ezeelogin?

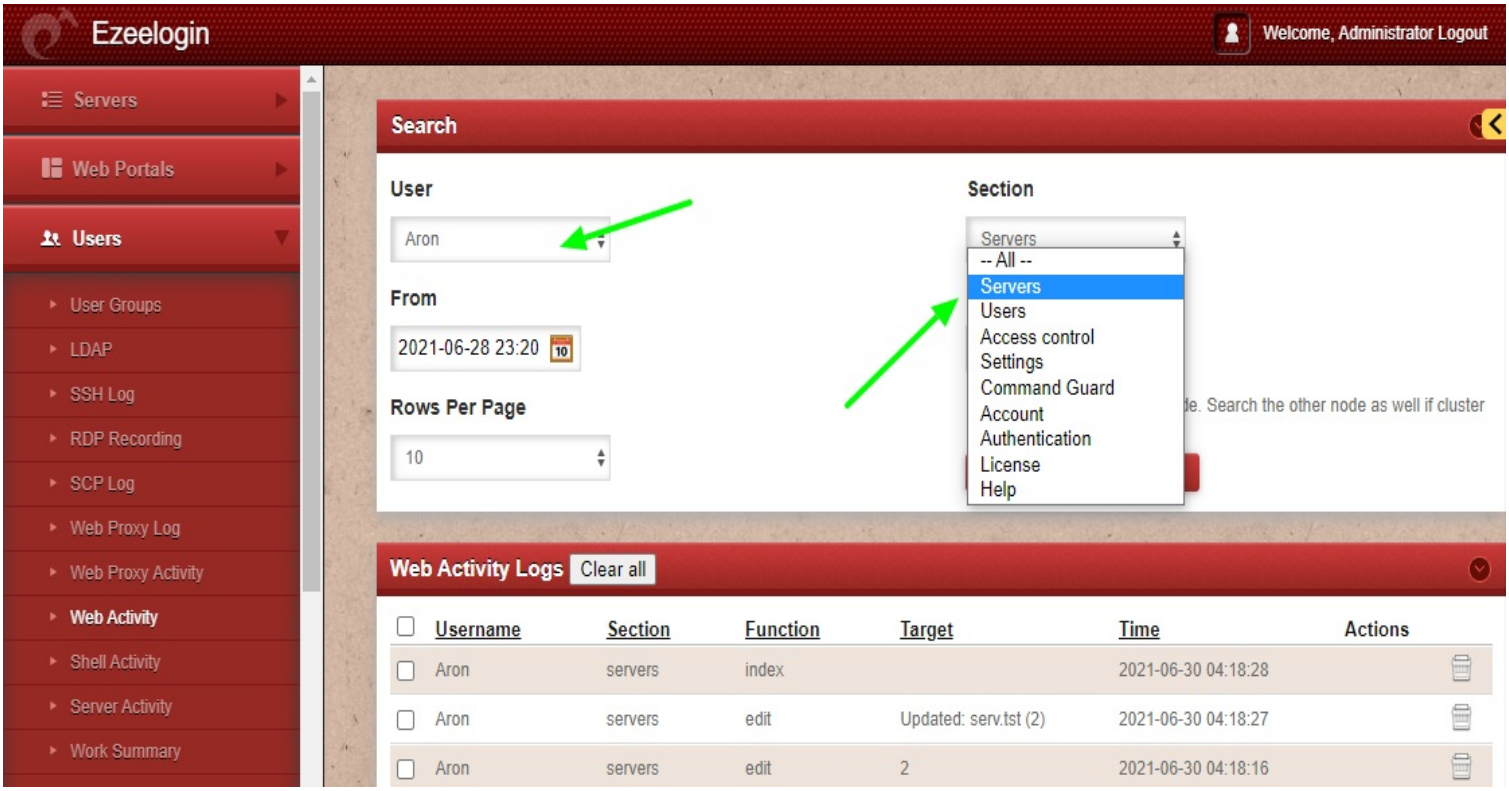

Overview: The "Web Activity" log provides a detailed record of user interactions with the web panel, including accessed sections and functions, along with date and time stamps; it allows searches based on user, section, and date range, where users are Ezeelogin accounts, sections are GUI areas accessed, and dates define the log search period.

Note: Only the Super admin user or the privileged user can access the web activity logs.

1. Click on the **Users** >> **Web Activity** tab to access the web activity logs. The following image shows an example of the web activity logs for the admin user.

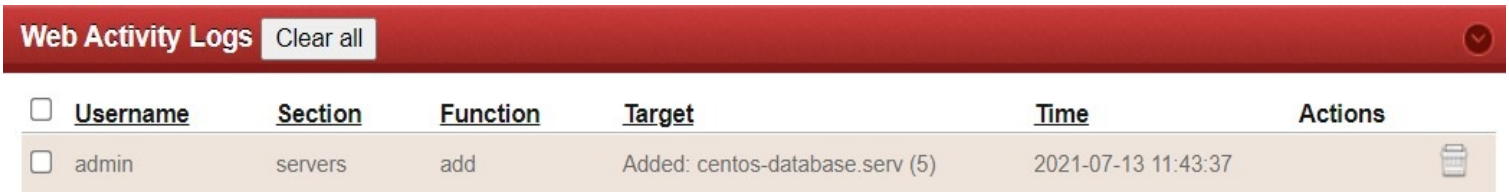

The drop-down menu for the **section** covers the following areas; **Servers**, **Users, Access control, Settings, Command Guard, Account, Authentication, License**, and **Help**. The following image shows the web activity logs of a regular user with the "Server" section.

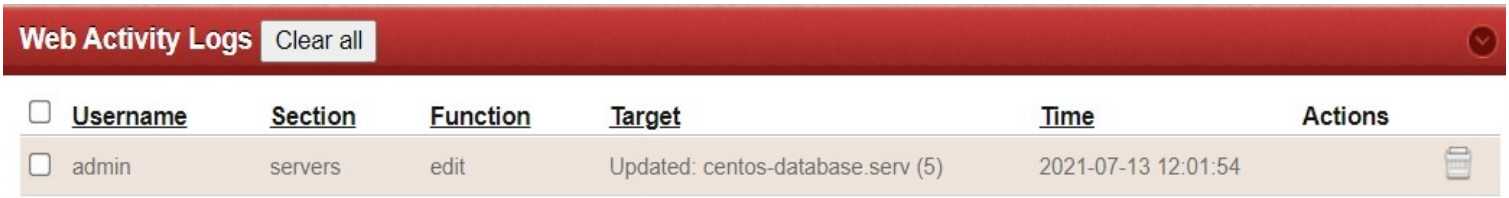

Under the **server section,** you can find the following web activity logs.

Add Server

Edit server

Delete server

Change server group

Enable or disable SSH connectivity

Web Activity Logs Clear all

Username	Section	Function	Target	Time	Actions
admin	servers	change	ssh_disable	2021-07-13 12:18:57	
admin	servers	change	ssh_enable	2021-07-13 12:18:14	

Change SSH port

Web Activity Logs Clear all

Username	Section	Function	Target	Time	Actions
admin	servers	change	port_change	2021-07-13 12:21:17	

Change SSH fingerprint

Web Activity Logs Clear all

Username	Section	Function	Target	Time	Actions
admin	servers	change	fingerprint	2021-07-13 12:17:22	

Reset password on servers

Web Activity Logs Clear all

Username	Section	Function	Target	Time	Actions
admin	servers	mass_reset	password	2021-07-13 12:24:14	
admin	servers	reset	password	2021-07-13 12:24:14	

Setup keys on servers

Web Activity Logs Clear all

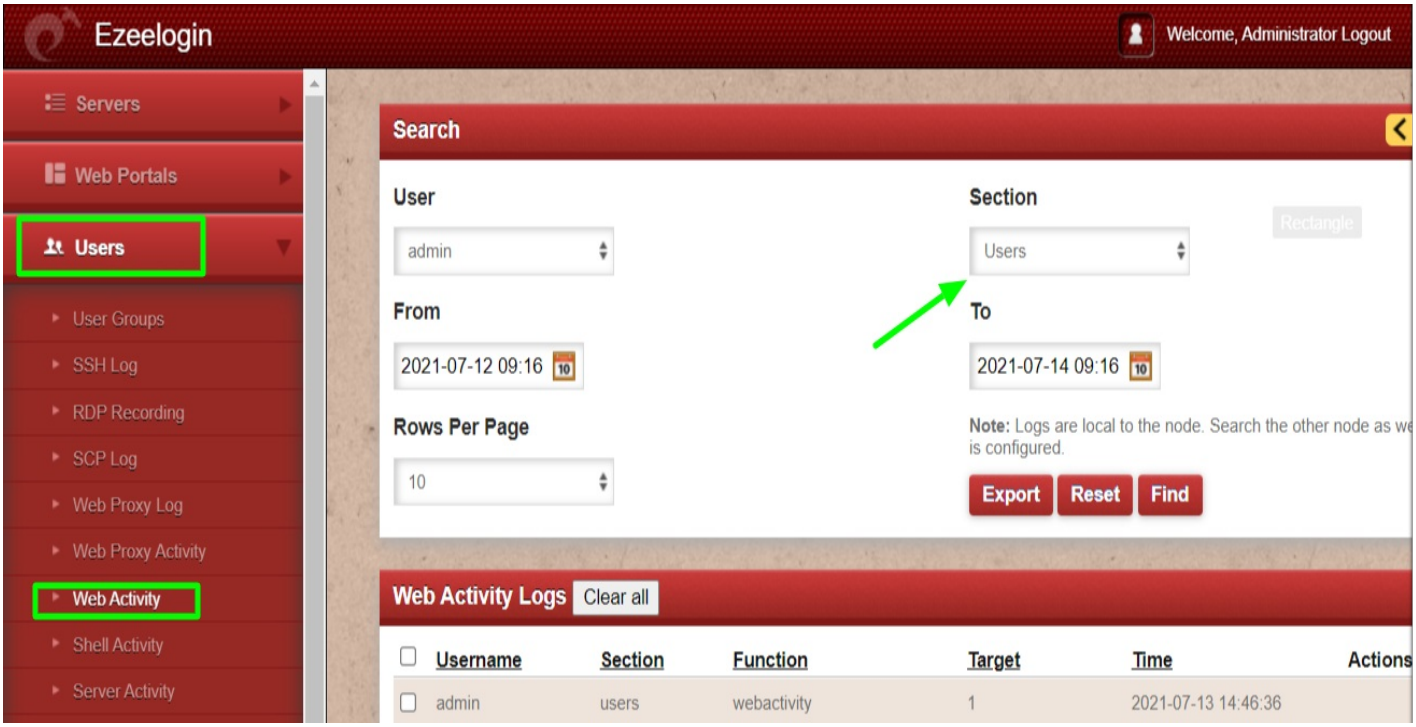

Username	Section	Function	Target	Time	Actions
admin	servers	mass_reset	key	2021-07-13 12:25:51	
admin	servers	reset	key	2021-07-13 12:25:51	

Server group creation

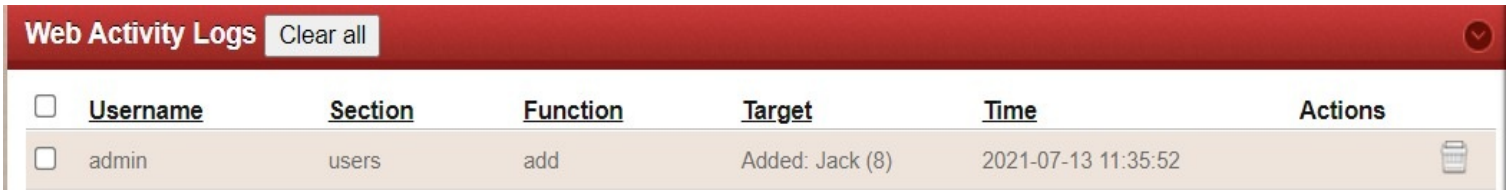

Web Activity Logs Clear all

Username	Section	Function	Target	Time	Actions
admin	servers	servergroup_add		2021-07-13 12:15:46	

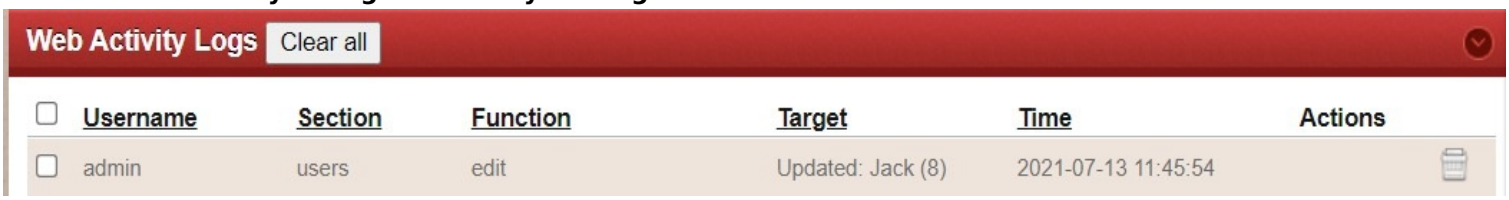

Under the **User section**, you can find the following web activity logs.

User add

Edit the user or any changes made by editing the user.

Delete user

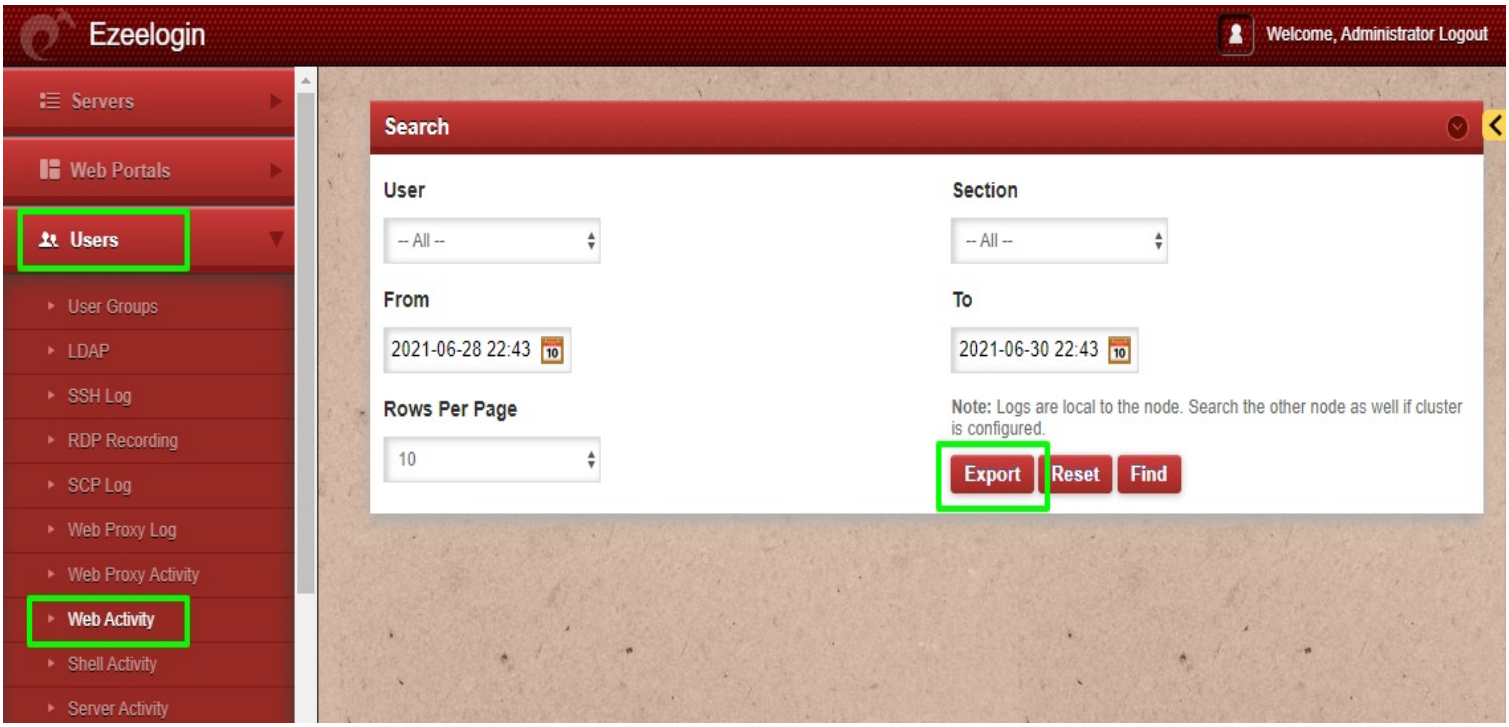

Reset access control(8 refers to the user_id of the user)

Generate and reset the password of the user.

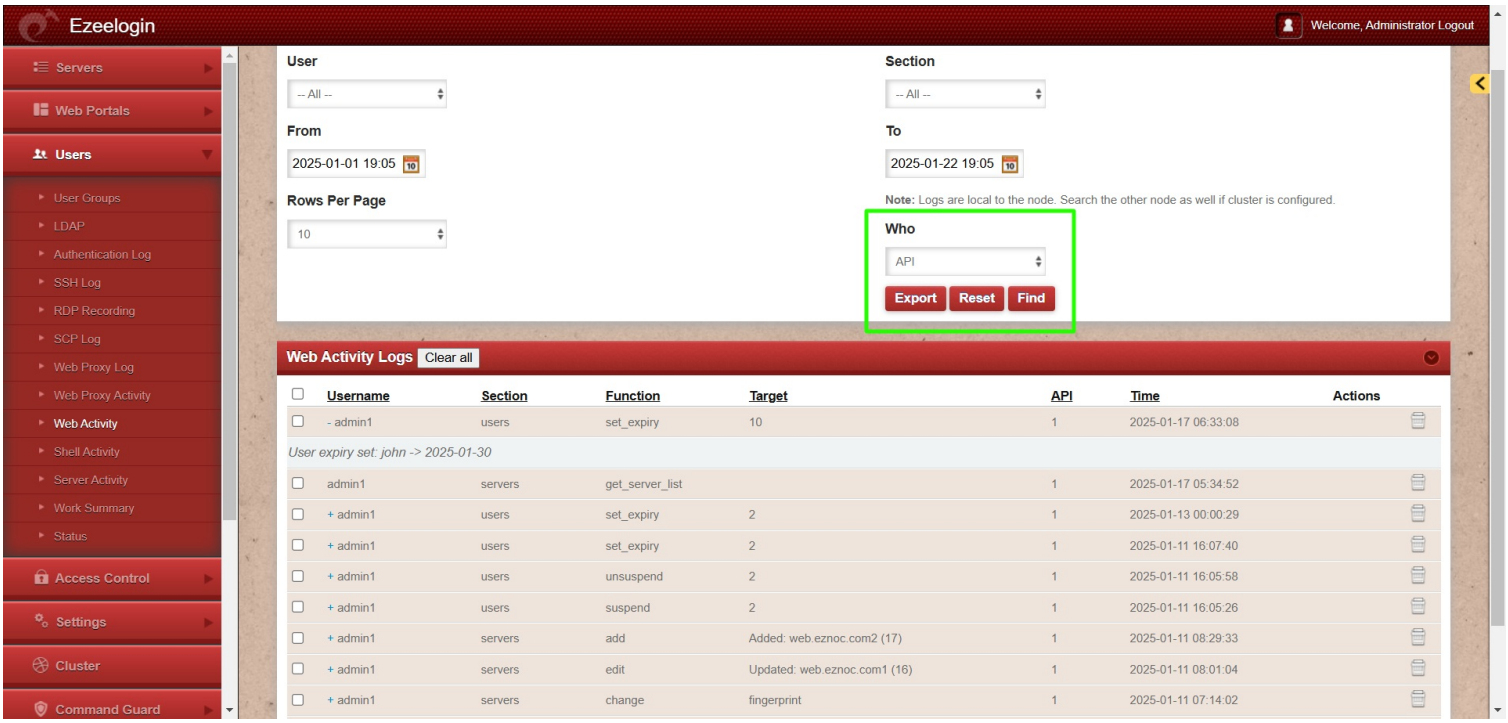

2. Export Web Activity log

Step 2(A): Click on the **Users -> Web Activity -> Export** to export the Web Activity logs into an Excel sheet. Refer to the following image to download all users' web activity logs into an Excel sheet.

3. View API logs

Step 3(A): To view all the actions performed via API navigate to **Users -> Web Activity -> who** and select **API**. This will display a list of logs for all actions executed through API.

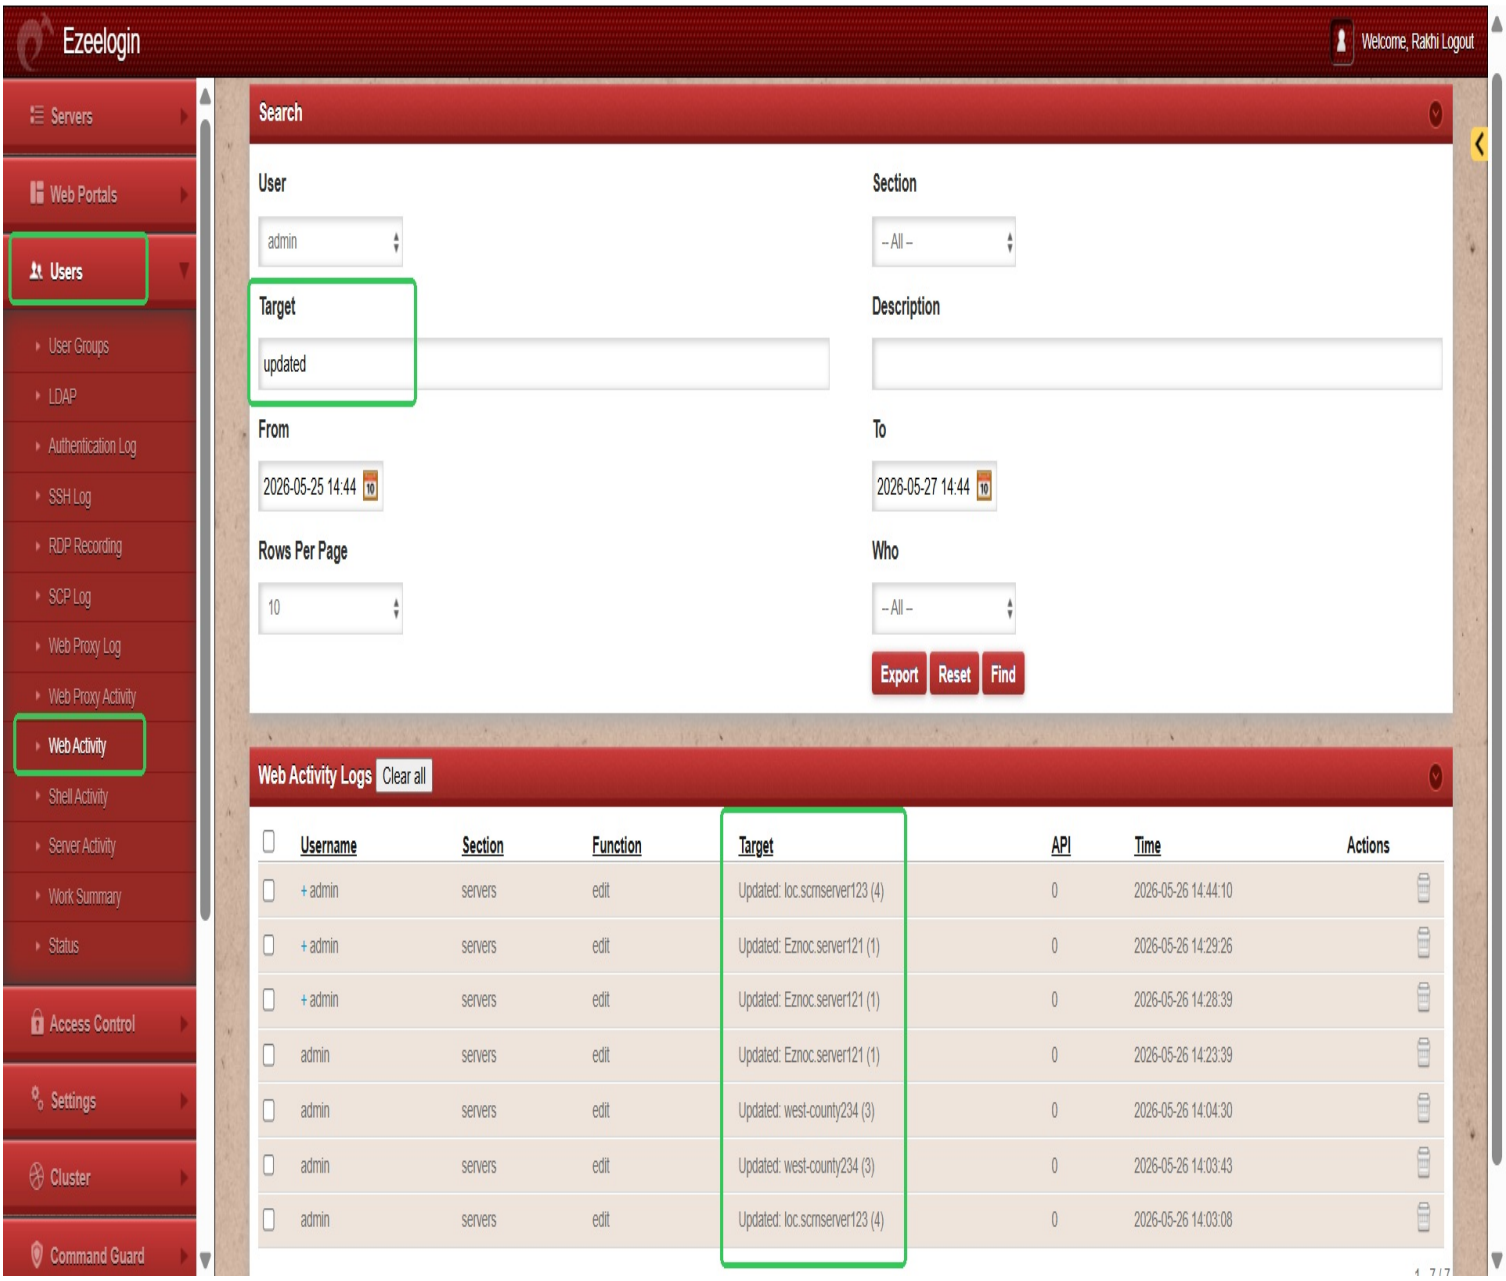

Step 3(B): Selecting "**User**" will display a list of logs for all actions executed through web GUI.

This feature to list the logs for the actions performed via API is available from Ezeelogin version 7.40.0

Can we get detailed logs of web activity from target and description?

Target - Denotes the changes made in remote server where the function has been performed. (eg. Updated,Deleted)

Description - Users can search for any available keyword only when logs are generated with the **Detailed Audit Log** option enabled. Refer below screenshot.

This enhancement to list the logs from Target and Description is available from **Ezeelogin version 7.46.0**
