How to solve "mesg: ttyname failed: Inappropriate ioctl for device"

Overview: This article helps to resolve the error "**mesg: ttyname failed: Inappropriate ioctl for device**" occur in Ezeelogin backend(ezsh) by **disabling virtual shell** for the Ezeelogin gateway user.

Login to **Ezeelogin GUI**, navigate to **User -> Edit user -> Disable virtual shell**.

The screenshot shows the Ezeelogin GUI with the 'Edit User' form open. The sidebar on the left has a red background with white text. The 'Users' menu item is highlighted with a green box. The main form has a white background with red borders. The 'Virtual Shell' checkbox is unchecked, and a green arrow points to it. The form contains various fields for user information, including First Name, Last Name, Username, Email, User Group, Expire, Limit IPs, Allowed IPs, SSH Private Key, Sub SSH User, Force Password Change, Status, Command Guard, Pass User Through, SSH Key Passphrase, LDAP, Prompt Reason, and Authorization Password. The 'Status' section has 'Active' selected. The 'Command Guard' section has 'None' selected. The 'Pass User Through' section has 'Inherit' selected. The 'SSH Key Passphrase' field is empty. The 'LDAP' section has 'None' selected. The 'Prompt Reason' section has 'None' selected. The 'Authorization Password' field is empty. The 'Cancel' and 'Save' buttons are at the bottom right.
