

Different types of Users in Ezeelogin

465 Nesvin KN August 13, 2024 [Features & Functionalities](#) 1851

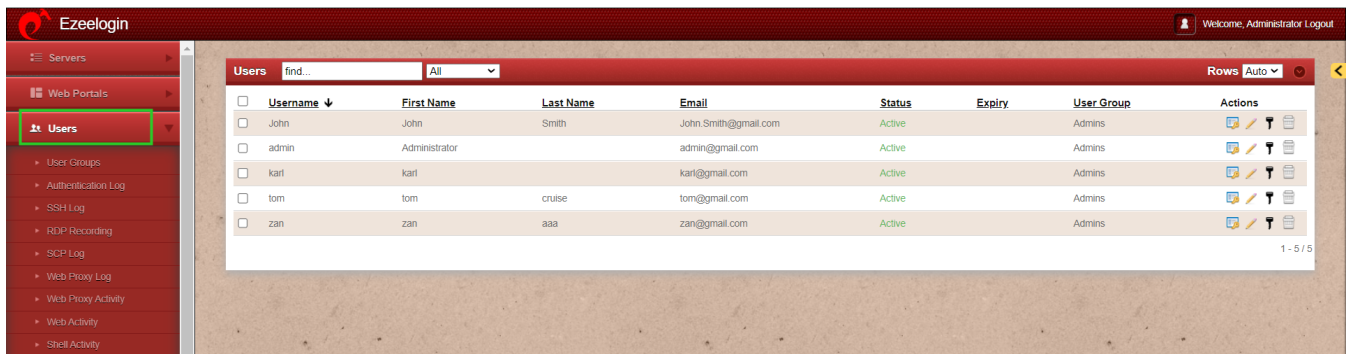

Types of users in Ezeelogin.

Overview: This article describes the different types of users in Ezeelogin: Ezeelogin Gateway Users, Remote SSH Users, SubSSH Users, and Pass User Through.

1. Ezeelogin Gateway User

Ezeelogin gateway users are users who are added through the Ezeelogin GUI.

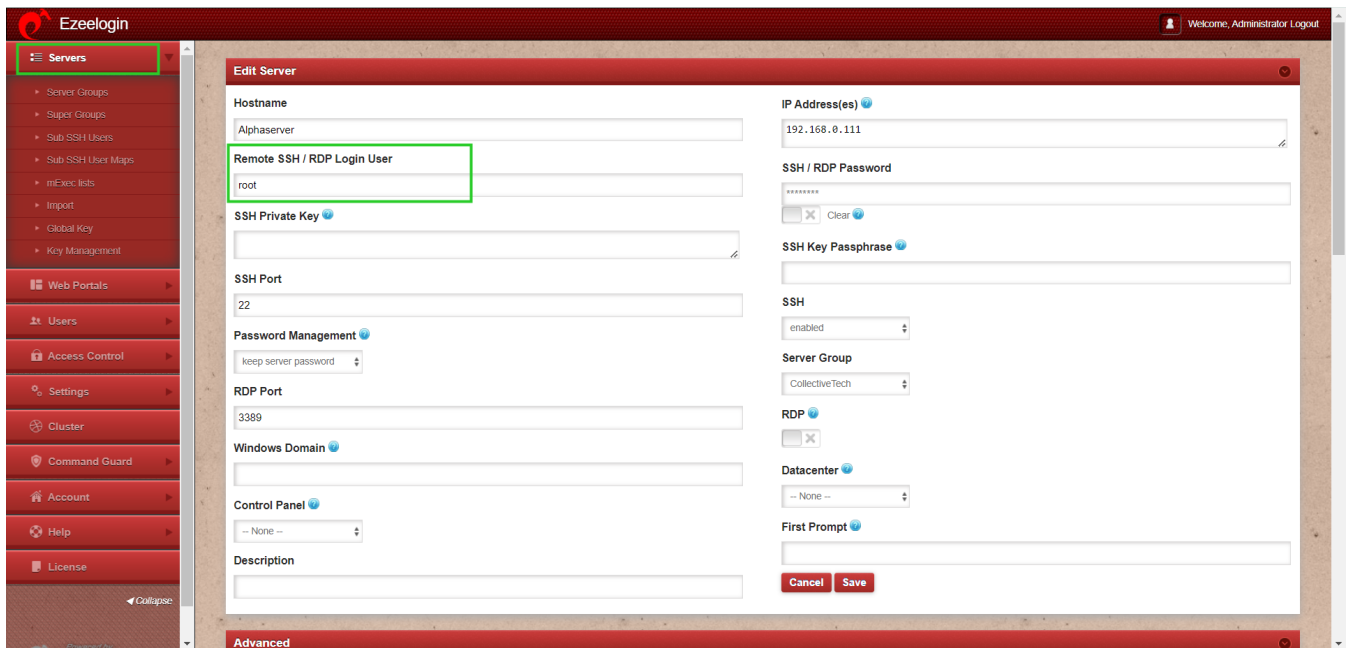

Refer to the below screenshot to add an Ezeelogin gateway user or refer to [usermanual](#).

2. Remote SSH User

Remote SSH users are the users that are logged in when SSH to the remote servers.

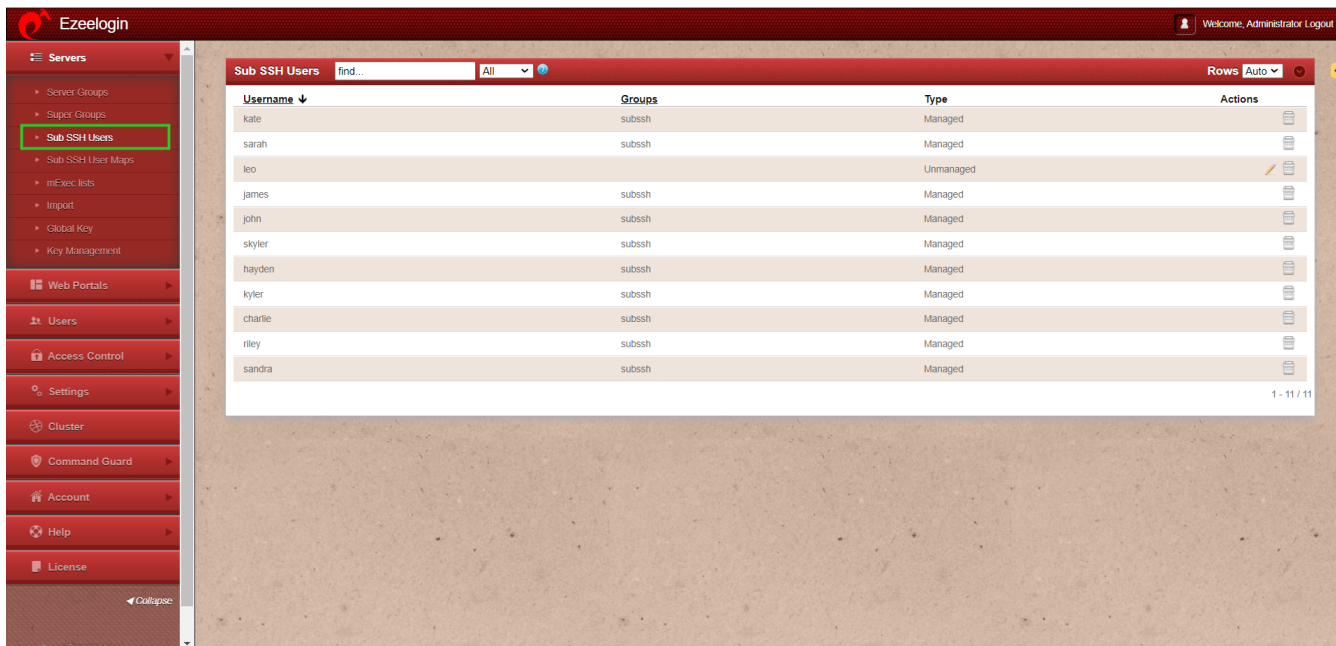

Refer below screenshot to add a remote SSH user.

3. SubSSH User

[Subssh users](#) are users who are created in Ezeelogin to log in to the remote servers as non-privileged users.

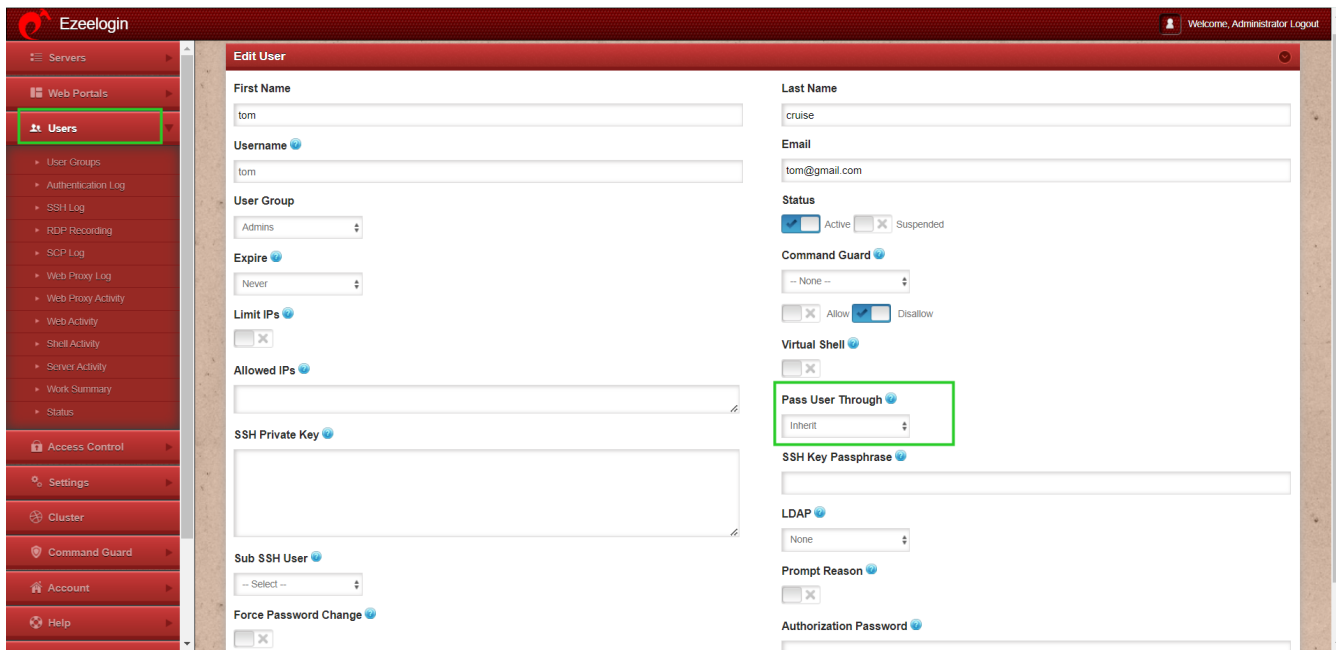

Refer to the screenshot or [article to add subssh user](#).

4. Pass User Through

Pass user through are users who can log in to a remote server as the same user logging into Ezeelogin GUI.

Refer below screenshot to [enable pass user through](#).
