How to enforce password policy or complexity such as minimum length, numbers , alphabet requirements, upper and lower case constraints?

472 admin May 3, 2026 Features & Functionalities, Technical 10545

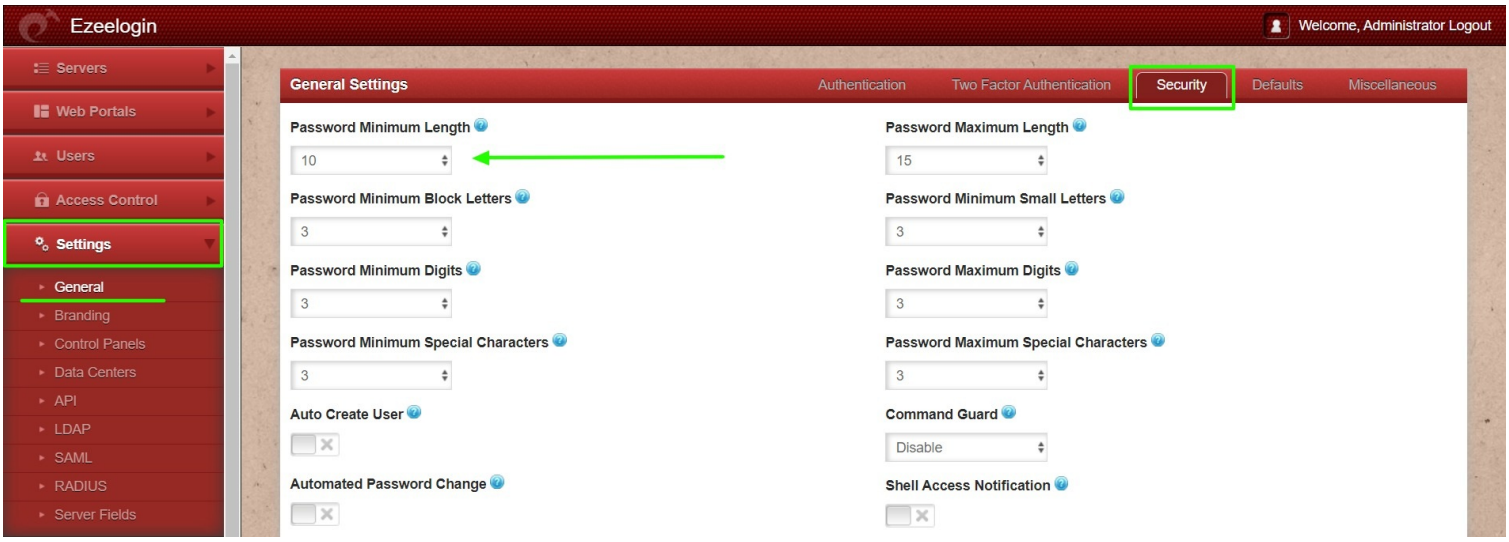

Enforce password policy or complexity to the Ezeelogin user's password

Overview: This article describes how to enforce password complexity settings for Ezeelogin users by adjusting parameters such as minimum and maximum length, digits, and special characters.

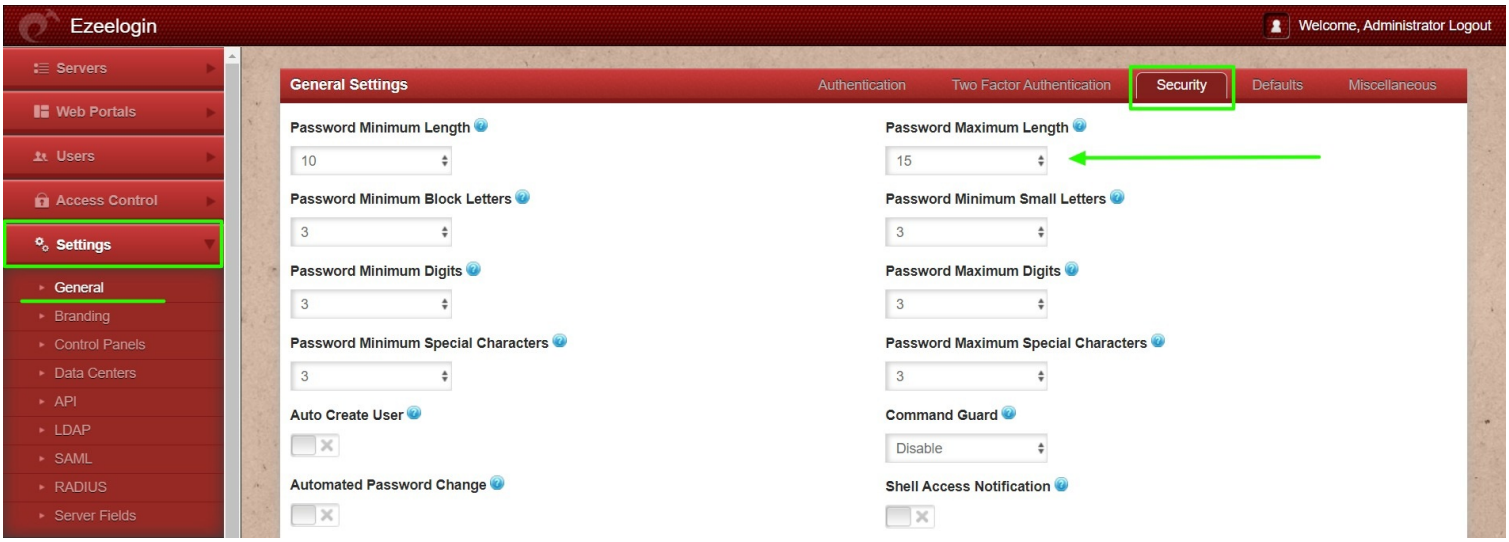

> Easily confusable characters such as uppercase and lowercase L, I, O, and the number 0 are excluded from auto-generated passwords by default to avoid confusion.

Step 1: Login to Ezeelogin GUI, navigate to **Settings** -> **General** -> **Security**

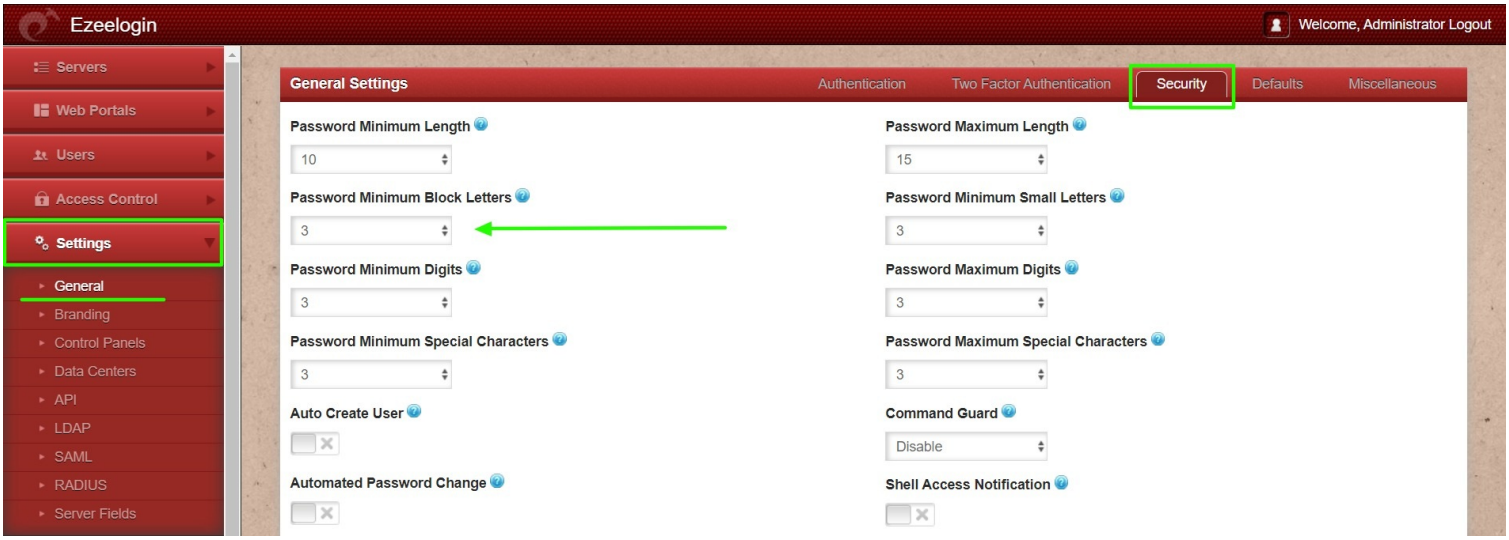

Password Minimum Length: Set a minimum length for passwords auto-generated by Ezeelogin for root or SSH users of the remote servers, as well as for Ezeelogin gateway users.

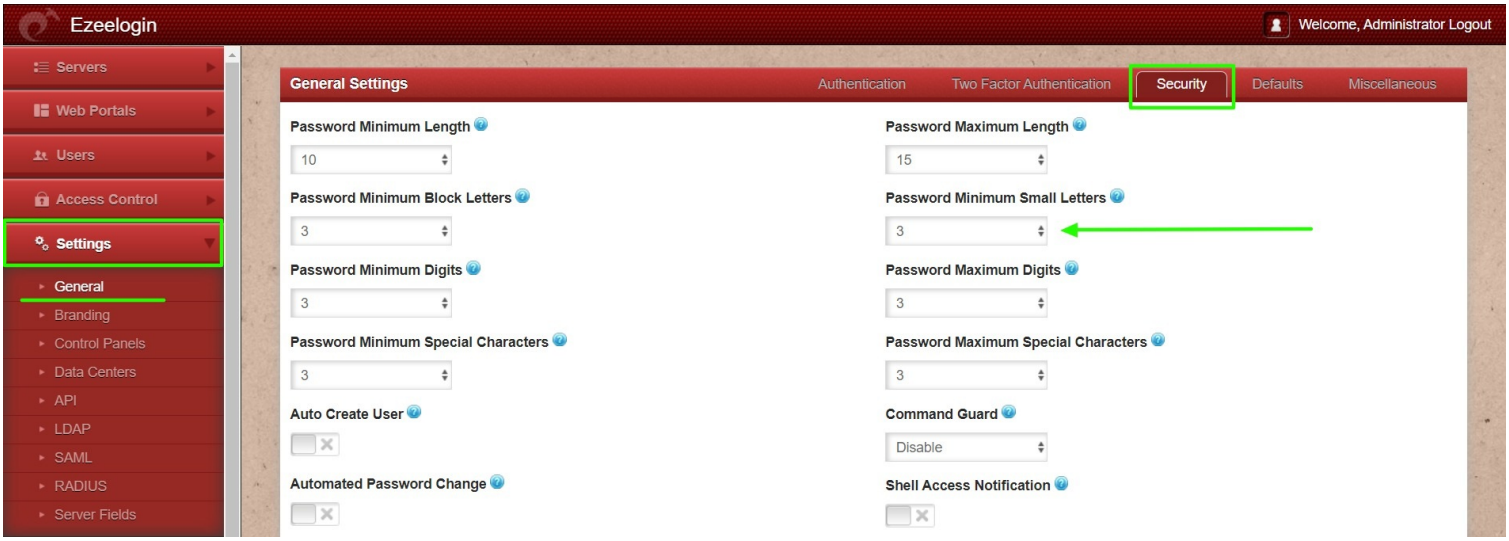

Password Maximum Length: Set a maximum length for passwords auto-generated by Ezeelogin for root or SSH users of the remote servers, as well as for Ezeelogin gateway users.

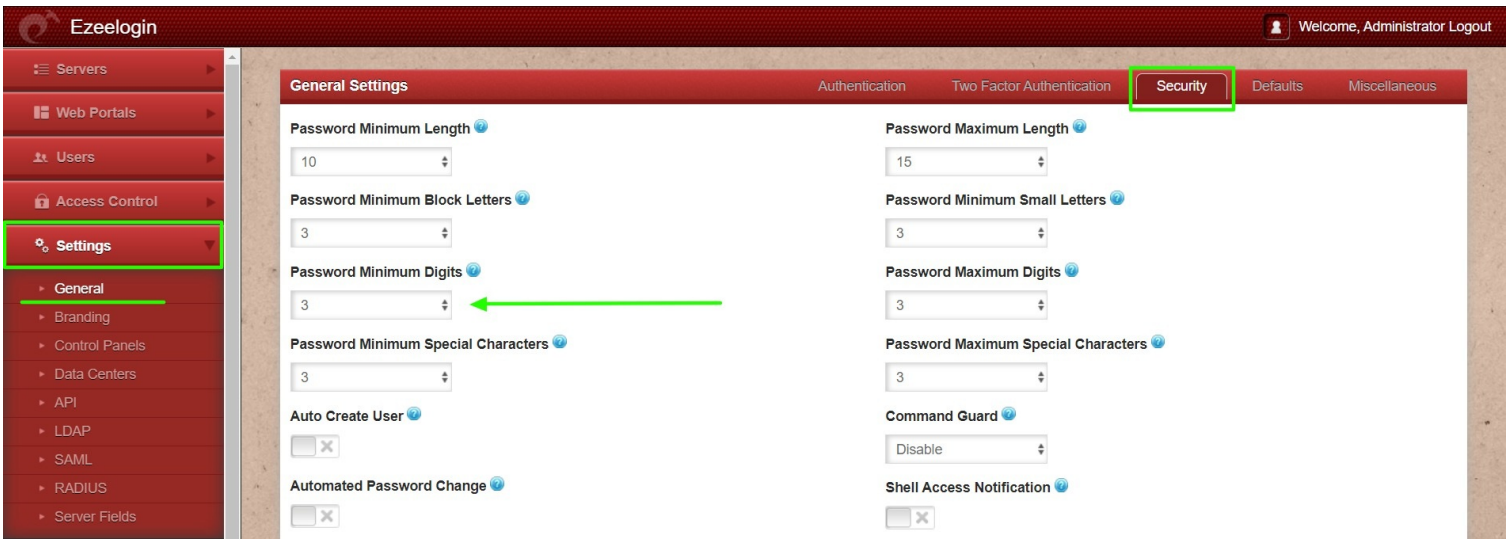

Password Minimum Block Letters: Set the minimum number of block letters in the gateway users password and remote server password.

Password Minimum Small Letters: Set the minimum number of small letters in the gateway users password and remote server password.

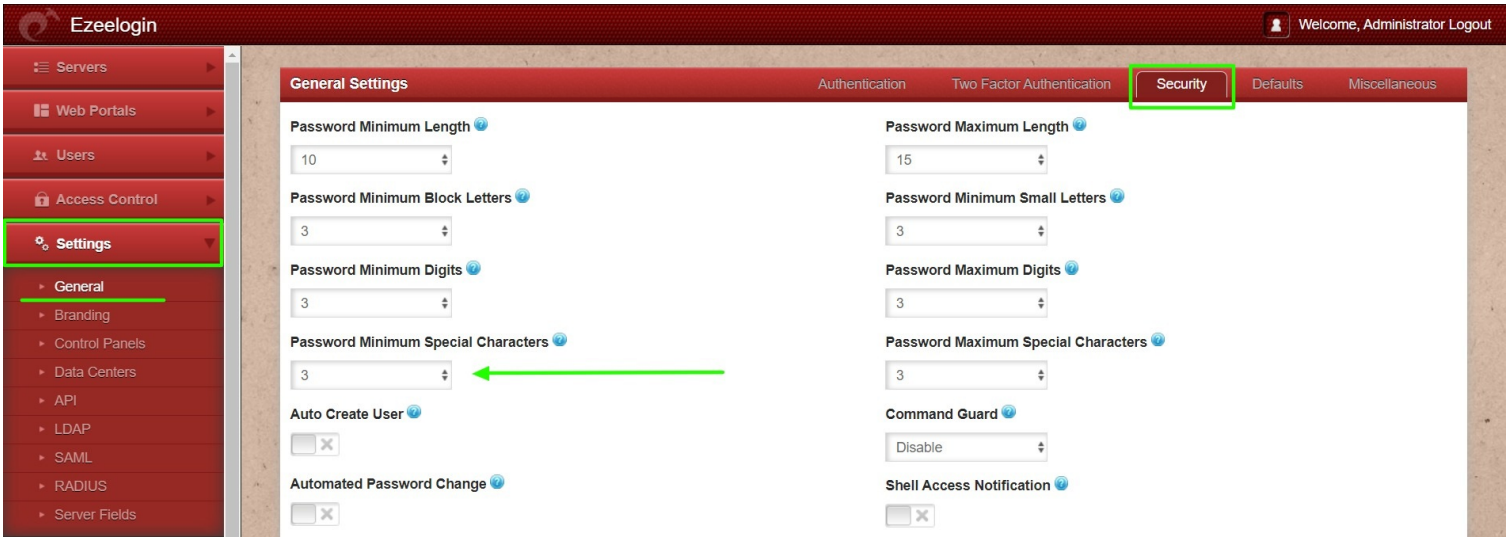

Password Minimum Digits: Set the minimum number of digits for auto-generated gateway user's password and remote server password.

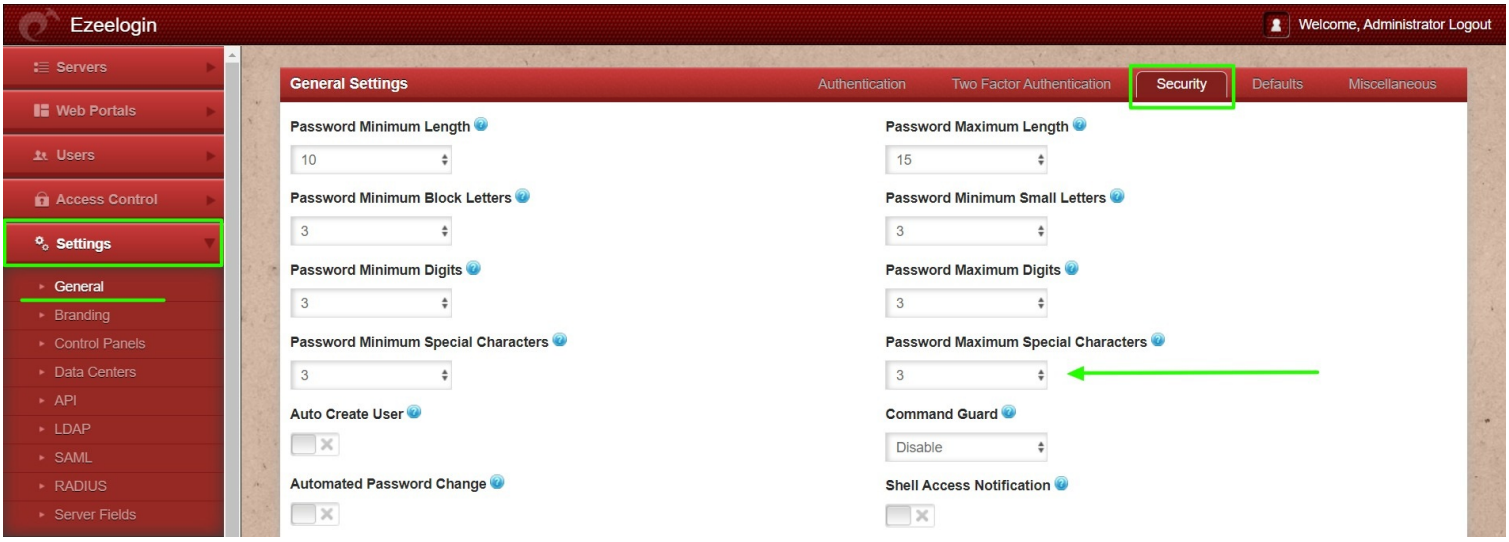

Password Maximum Digits: Set the maximum number of digits for auto-generated gateway user's password and remote server password.

Password Minimum Special Characters: Set the minimum number of special characters for auto-generated gateway user's password and remote server password.

Password Maximum Special Characters: Set the maximum number of special characters for auto-generated gateway user's password and remote server password.

Ensure Ezeelogin is updated to the latest version to access all features.

Password Maximum Special Characters and **Password Maximum Digits are** only available from **Ezeelogin version 7.35.0**.

Upgrade Ezeelogin to the latest version.
