What are the scenarios when the security code is prompted?

475 Vishnupriya February 4, 2025 Getting Started 7238

Security code for Ezsh shell

Overview: This article explains the use of the static security code in Ezsh shell, detailing when it's prompted, how to disable 2FA, and how to set or change the security code in the gateway user's account.

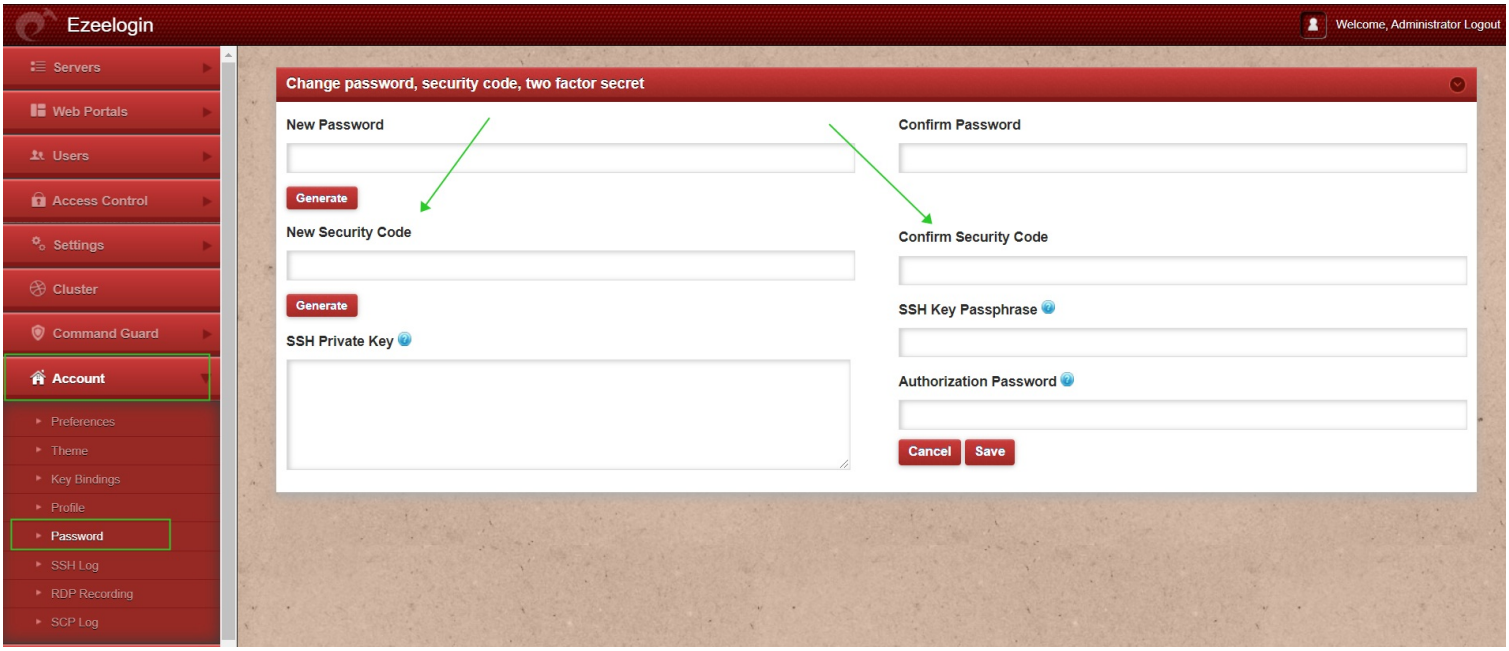

1. The static security code is used only when 2FA is not enabled.

> **Note: Refer the following articles to disable 2fa**
>
> How to disable 2FA from Ezeelogin GUI?
>
> Clear two factor authentication

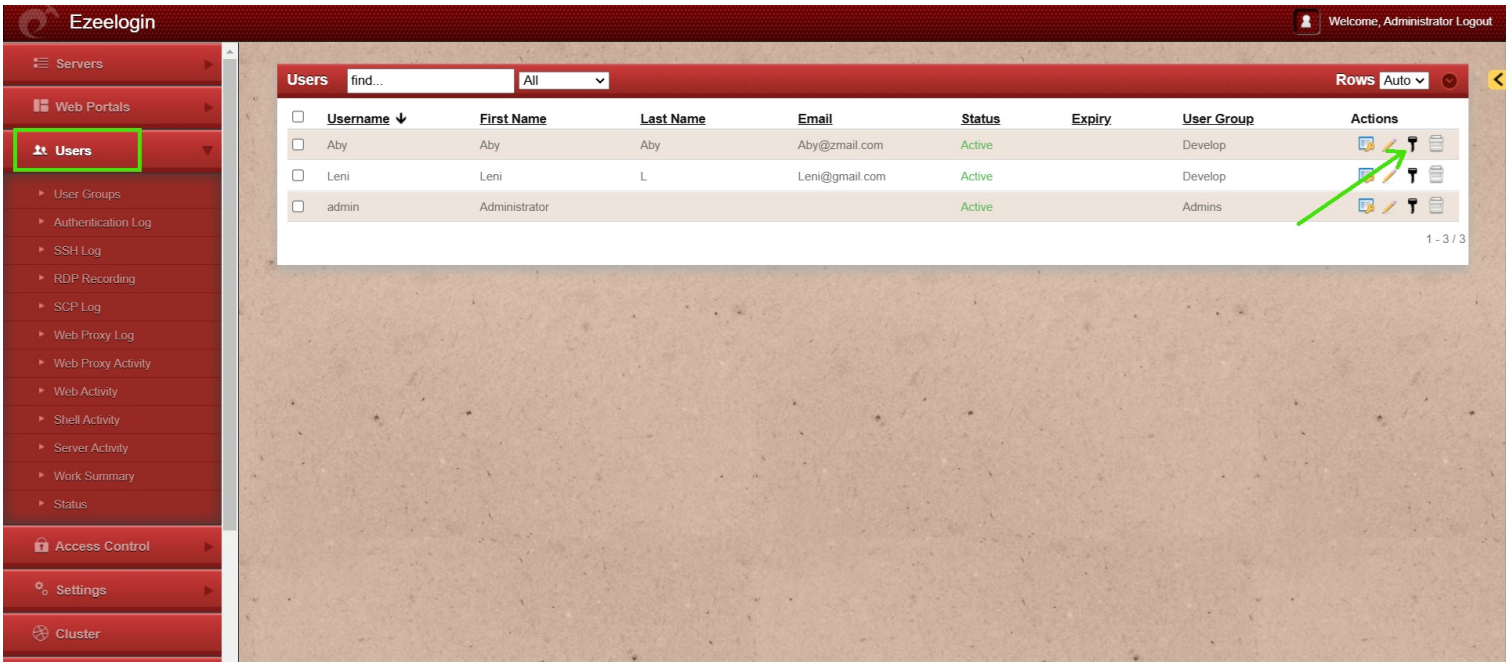

2. The security code would be prompted when you ssh to the **Ezsh shell** after entering the user password as shown in the screenshot below.

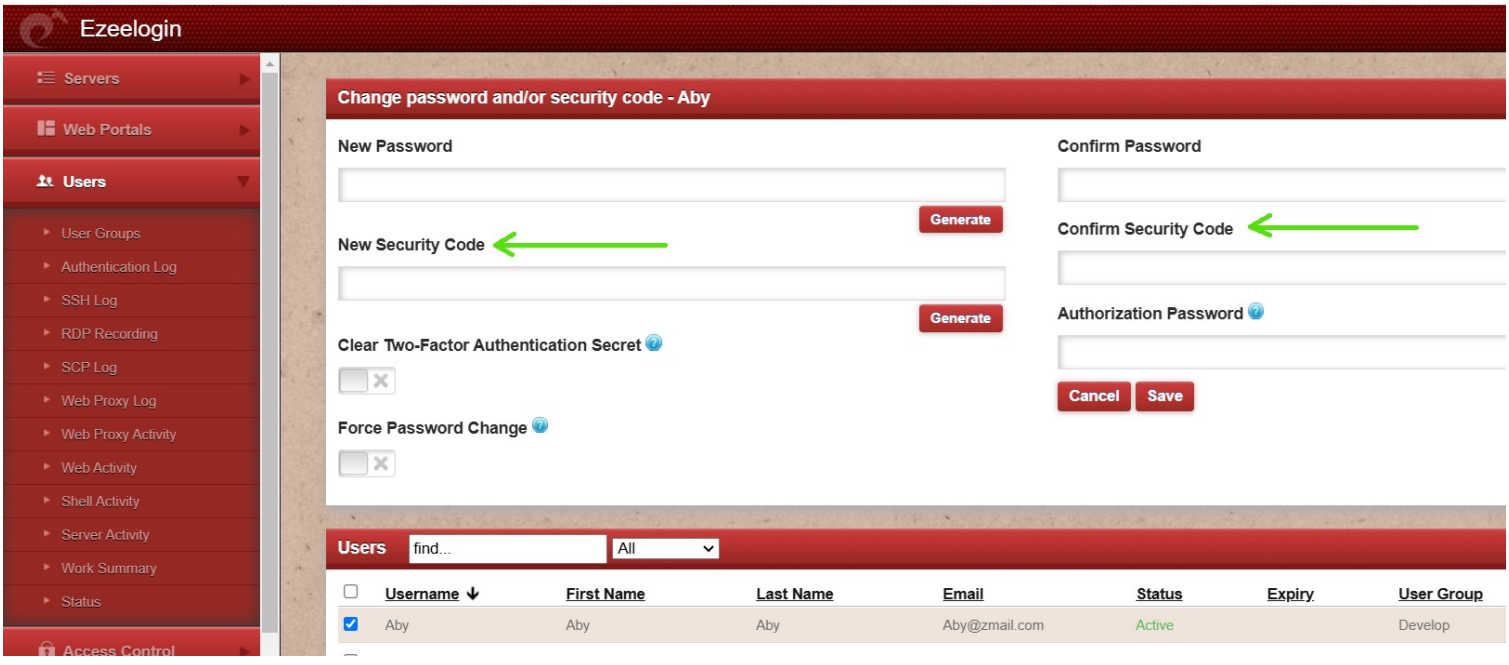

3. You can set or change the security code from the WebGUI under **Account -> Password**

Also, an admin user can reset the security code for other users through the WebGUI by navigating to **Users -> clicking on Reset Password.** Refer to the screenshot below.

Note:

Authorization Password: The Authorization Password is the password of the currently logged-in user. For example, if logged in as "ezadmin," the password for the "ezadmin" user should be used as the Authorization Password.

It is mandatory to use security code or 2fa while ssh ing to the Ezsh shell.
