How to configure Web proxy, Web portals, Control Panel, Web panel through Ezeelogin?

Overview: This article explains how to configure Web proxy, Web portals, Control Panels, and Web panels through Ezeelogin, detailing their functions and providing steps for setup and access.

1. Web proxy

Web proxy is a feature that lets you access external online portals via reverse proxy on the Ezeelogin server itself. If web proxy is enabled, the portal that you have added to the Ezeelogin can be accessed via Ezeelogin proxy. Refer to the [article to use web portal proxy in Ezeelogin](#)

2. Web portal

Web portal manages logins to online web portals for one-click access. To access a web portal, details such as the Login URL, Host, Port, and Request URI must be provided. For web portals, these details may need to be added multiple times for different logins.

Web portal can also access by enabling use proxy. This feature let you access the web portals via CSRF Tokens for authentication.

3. Control Panel

A Control Panel is a web-based interface used for server management. Examples include Cpanel, Plesk, Webmin, and others. To add a control panel, only the Request URI is required. The control panel needs to be added once, and it can be selected when adding or editing a server. When accessing the control panel, it uses the server details associated with the added control panel.

The screenshot shows the Ezeelogin administrative interface. On the left, a red sidebar contains a 'Settings' section with a green arrow pointing to 'Control Panels'. The main area displays a 'Control Panels' window with a search bar and a table of installed panels.

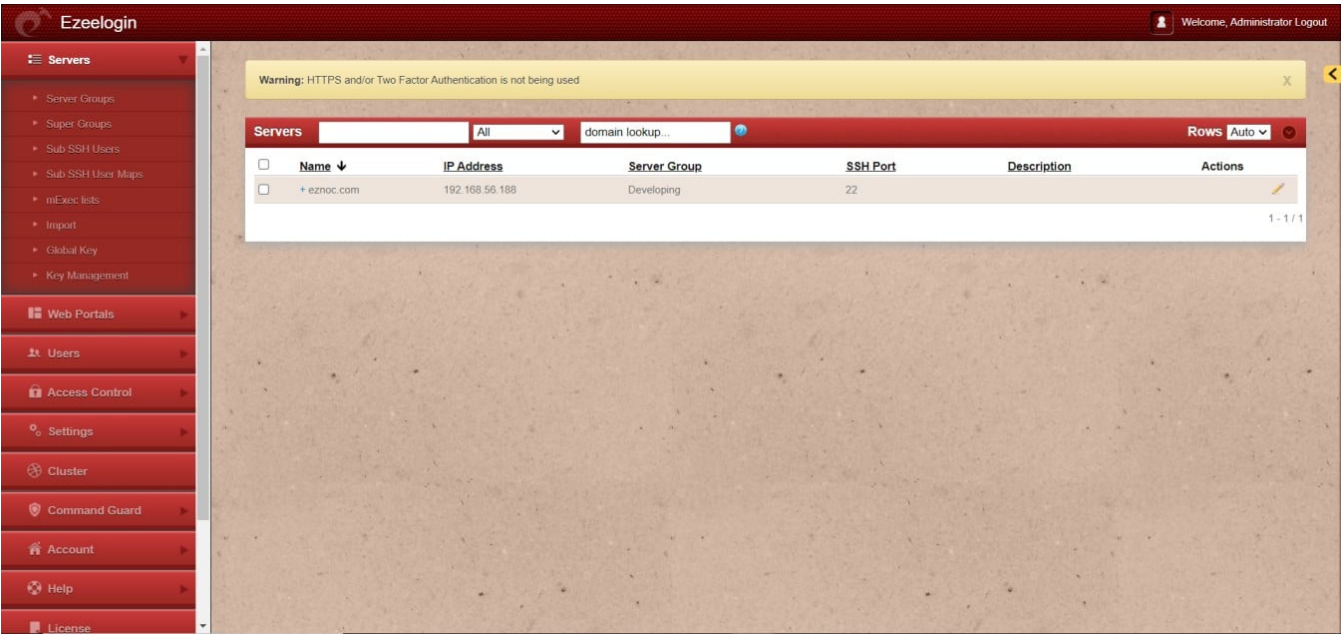

<input type="checkbox"/>	Name ↓	Description	Protocol	Port	Request URI	Request Method	Actions
<input type="checkbox"/>	cpanel/WHM	cpanel - Web Host Manager	https	2087	/login/	POST	
<input type="checkbox"/>	plesk	plesk admin panel	https	8443	/login_up.php3	POST	
<input type="checkbox"/>	webmin	webmin control panel	https	10001	/session_login.cgi	POST

Refer to the following article for [adding a control panel](#).

4. Web panel

Webpanel is the same as the Ezeelogin GUI that you access from your browser.
