How to configure Web proxy, Web portals, Control Panel, Web panel through Ezeelogin?

What is Web proxy and How to configure Web proxy through Ezeelogin

Web proxy

Web proxy is a feature that lets you access external online portals via reverse proxy on the Ezeelogin server itself. If web proxy is enabled, the portal that you have added to the Ezeelogin can be accessed via Ezeelogin proxy. Refer to the following article to use web portal proxy in Ezeelogin

<https://www.ezeelogin.com/kb/article/how-to-use-web-portal-proxy-in-ezeelogin-295.html>

What is Web portal and How to configure Web portal through Ezeelogin

Web portal

Web portal manages logins to online web portals for one-click access. In order to access a web portal we need to provide **Login URL, Host, Port, Request URI** etc. In case of web portal we need to add details multiple times for different logins.

Web portal can also access by enabling use proxy, This feature let you access the web portals via CSRF Tokens for authentication.

What is Control Panel and How to configure Control Panel through Ezeelogin

Control Panel

Control Panel is a web-based interface that are used for server management. Examples of control panels are Cpanel, Plesk, Webmin, etc. For adding a control panel **Request URI** is enough. Control panel is needed to add once, also we can select the control panel at the time of adding or editing server, When we are accessing the control panel it uses the details of the server to which to which the control panel added.

The screenshot shows the Ezeelogin administrative interface. The left sidebar contains a menu with the following items: Servers, Web Portals, Users, Access Control, Settings (highlighted with a green bar), General, Branding, Control Panels (indicated by a green arrow), Data Centers, API, LDAP, SAML, RADIUS, Server Fields, Cluster, Command Guard, Account, and Help. The main content area displays the 'Control Panels' configuration page. At the top, there is a search bar labeled 'find...' and a dropdown menu set to 'All'. Below this is a table with the following columns: Name, Description, Protocol, Port, Request URI, Request Method, and Actions. The table contains three entries: cpanel/WHM, plesk, and webmin. Each entry has a checkbox in the Name column and edit/delete icons in the Actions column. The bottom right corner of the table shows '1 - 3 / 3'.

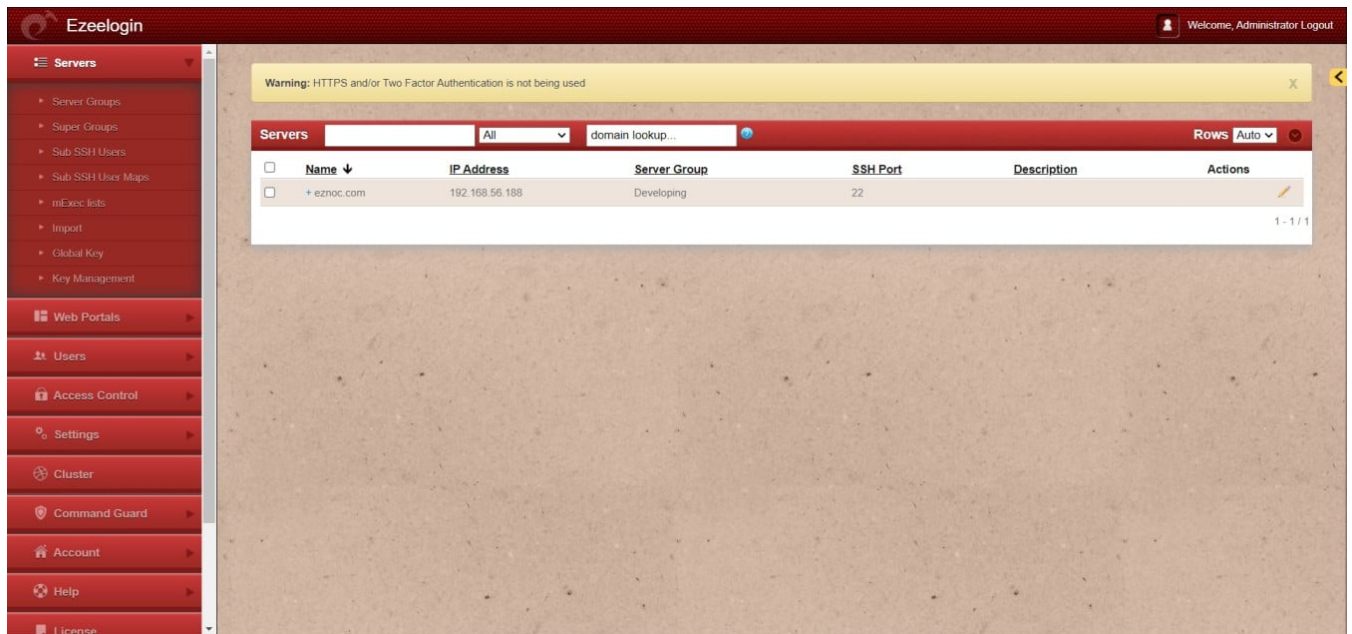

| <input type="checkbox"/> | Name ↓ | Description | Protocol | Port | Request URI | Request Method | Actions |
|--------------------------|------------|---------------------------|----------|-------|--------------------|----------------|---------|
| <input type="checkbox"/> | cpanel/WHM | cpanel - Web Host Manager | https | 2087 | /login/ | POST | |
| <input type="checkbox"/> | plesk | plesk admin panel | https | 8443 | /login_up.php3 | POST | |
| <input type="checkbox"/> | webmin | webmin control panel | https | 10001 | /session_login.cgi | POST | |

Refer to the following article for adding a control panel.

<https://www.ezeelogin.com/kb/article/adding-directadmin-as-controlpanel-in-ezeelogin-417.html>

Web panel

Webpanel is the same as the Ezeelogin GUI that you access from your browser.
