Enable/Disable 2FA [Two Factor Authentication] on Ezeelogin

489 admin July 8, 2026 Common Errors & Troubleshooting 12205

How to Enable/Disable Two Factor Authentication (2FA) on Ezeelogin Jump Server?

The SSH interface and GUI of the Gateway Server (Ezeelogin Jump Server) are now enhanced with multi-factor authentication methods, including Google Authenticator Applications (e.g., Google Authenticator, Microsoft Authenticator, and others), Yubikey, DUO Security, access keyword, RADIUS and FIDO2 authentication to provide robust protection for accessing your Linux servers.

Note: The QR code generation feature is currently affected by the deprecation of the Google Image Charts API, which ceased operation on March 14, 2024. To address this, kindly **update** to Ezeelogin version 7.37.5

Check out the following article to configure FIDO2 authentication.

Configure FIDO2 with Ezeelogin

Check out the following article to configure Authenticator Applications (e.g., Google Authenticator, Microsoft Authenticator, and others).
