Access Ezeelogin Backend Shell

526 Jisna Joseph February 3, 2025 Getting Started 5734

How to access Ezeelogin backend shell(ezsh)?

Overview: This article details two methods for accessing the Ezeelogin backend shell (ezsh): via SSH using a terminal or an SSH client like PuTTY, and through the Web SSH Console in the web GUI. It includes login steps, authentication requirements, and setup instructions for Web SSH access.

1. Accessing backend shell using any regular ssh clients such as Putty on Windows, Terminal on Mac, or console in Linux.

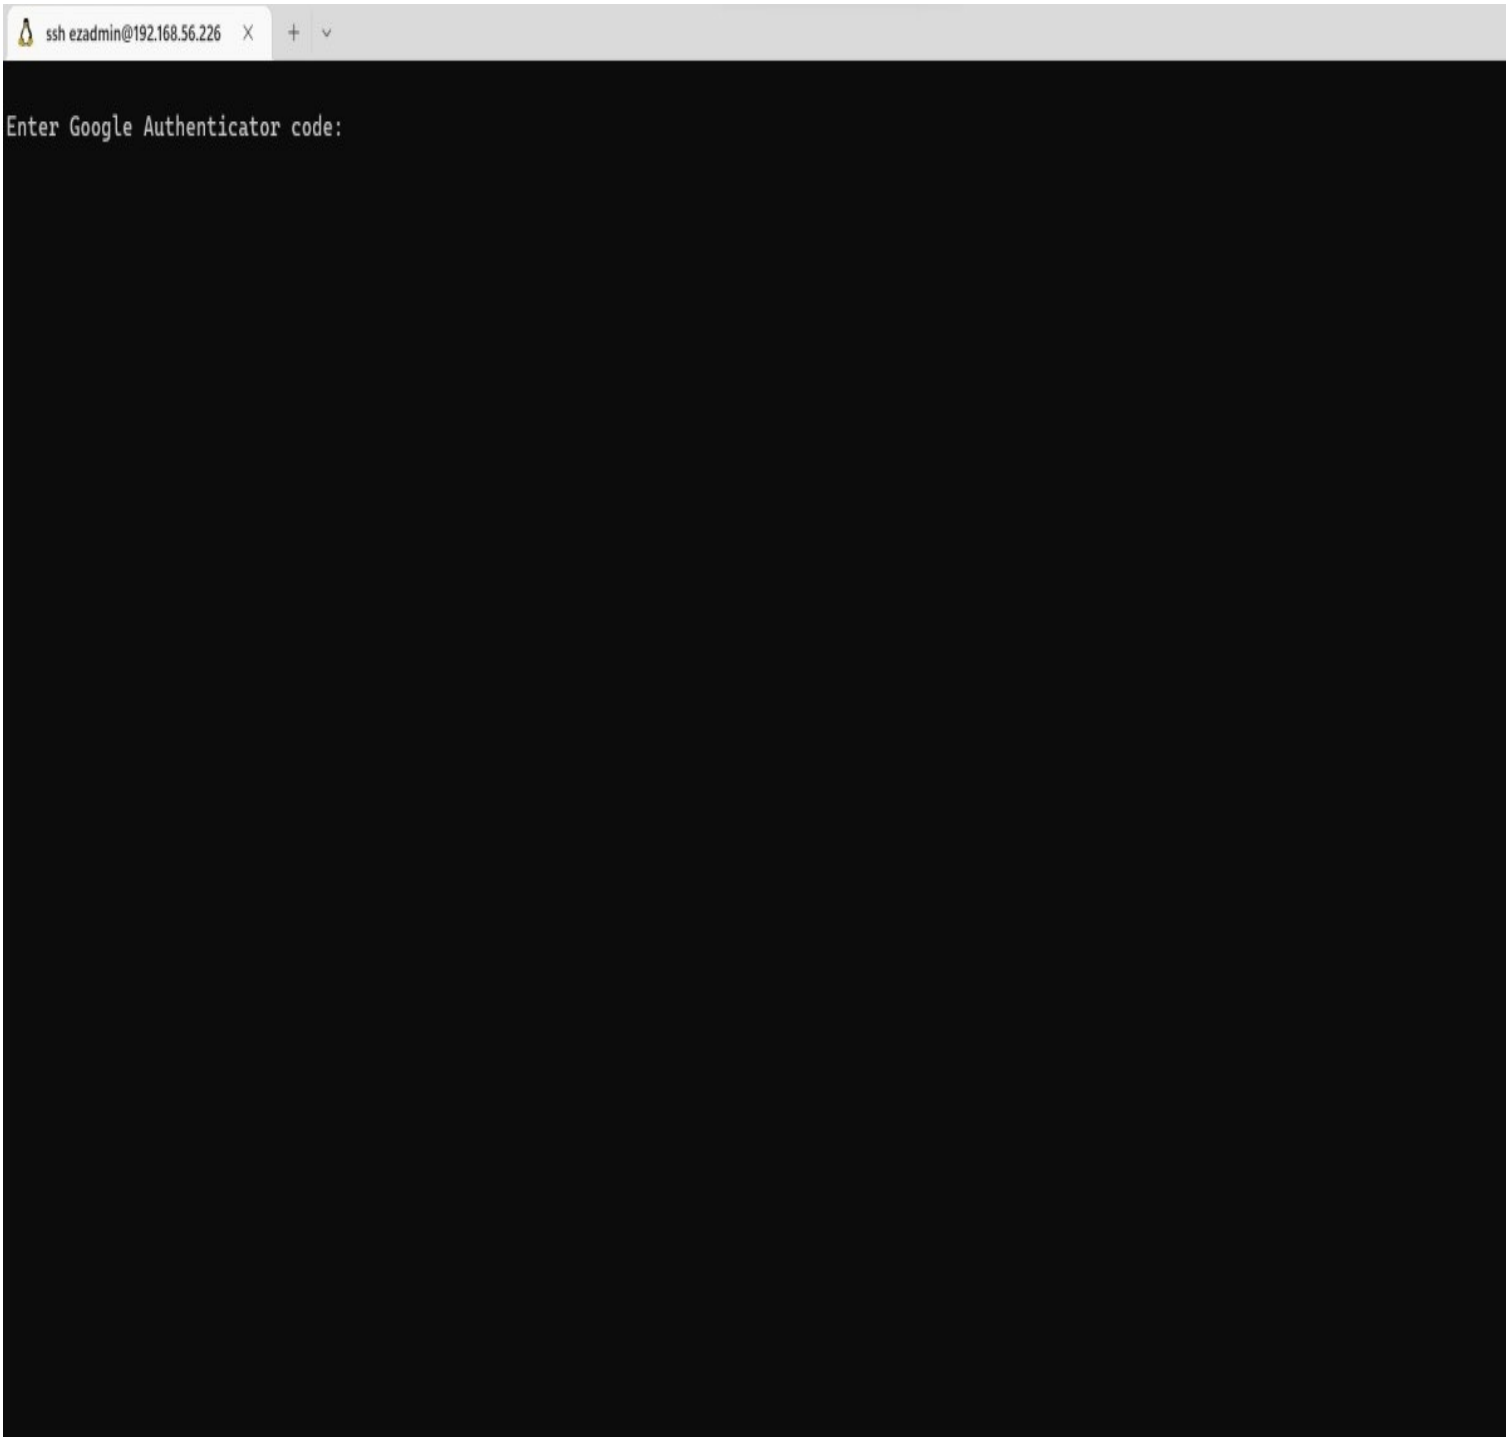
Step 1: Use the Ezeelogin username and the server's IP address or hostname to login to backend(ezsh)

```
root@desktop:$ ssh ezeelogin_username@ezeelogin_serverip/hostname
```

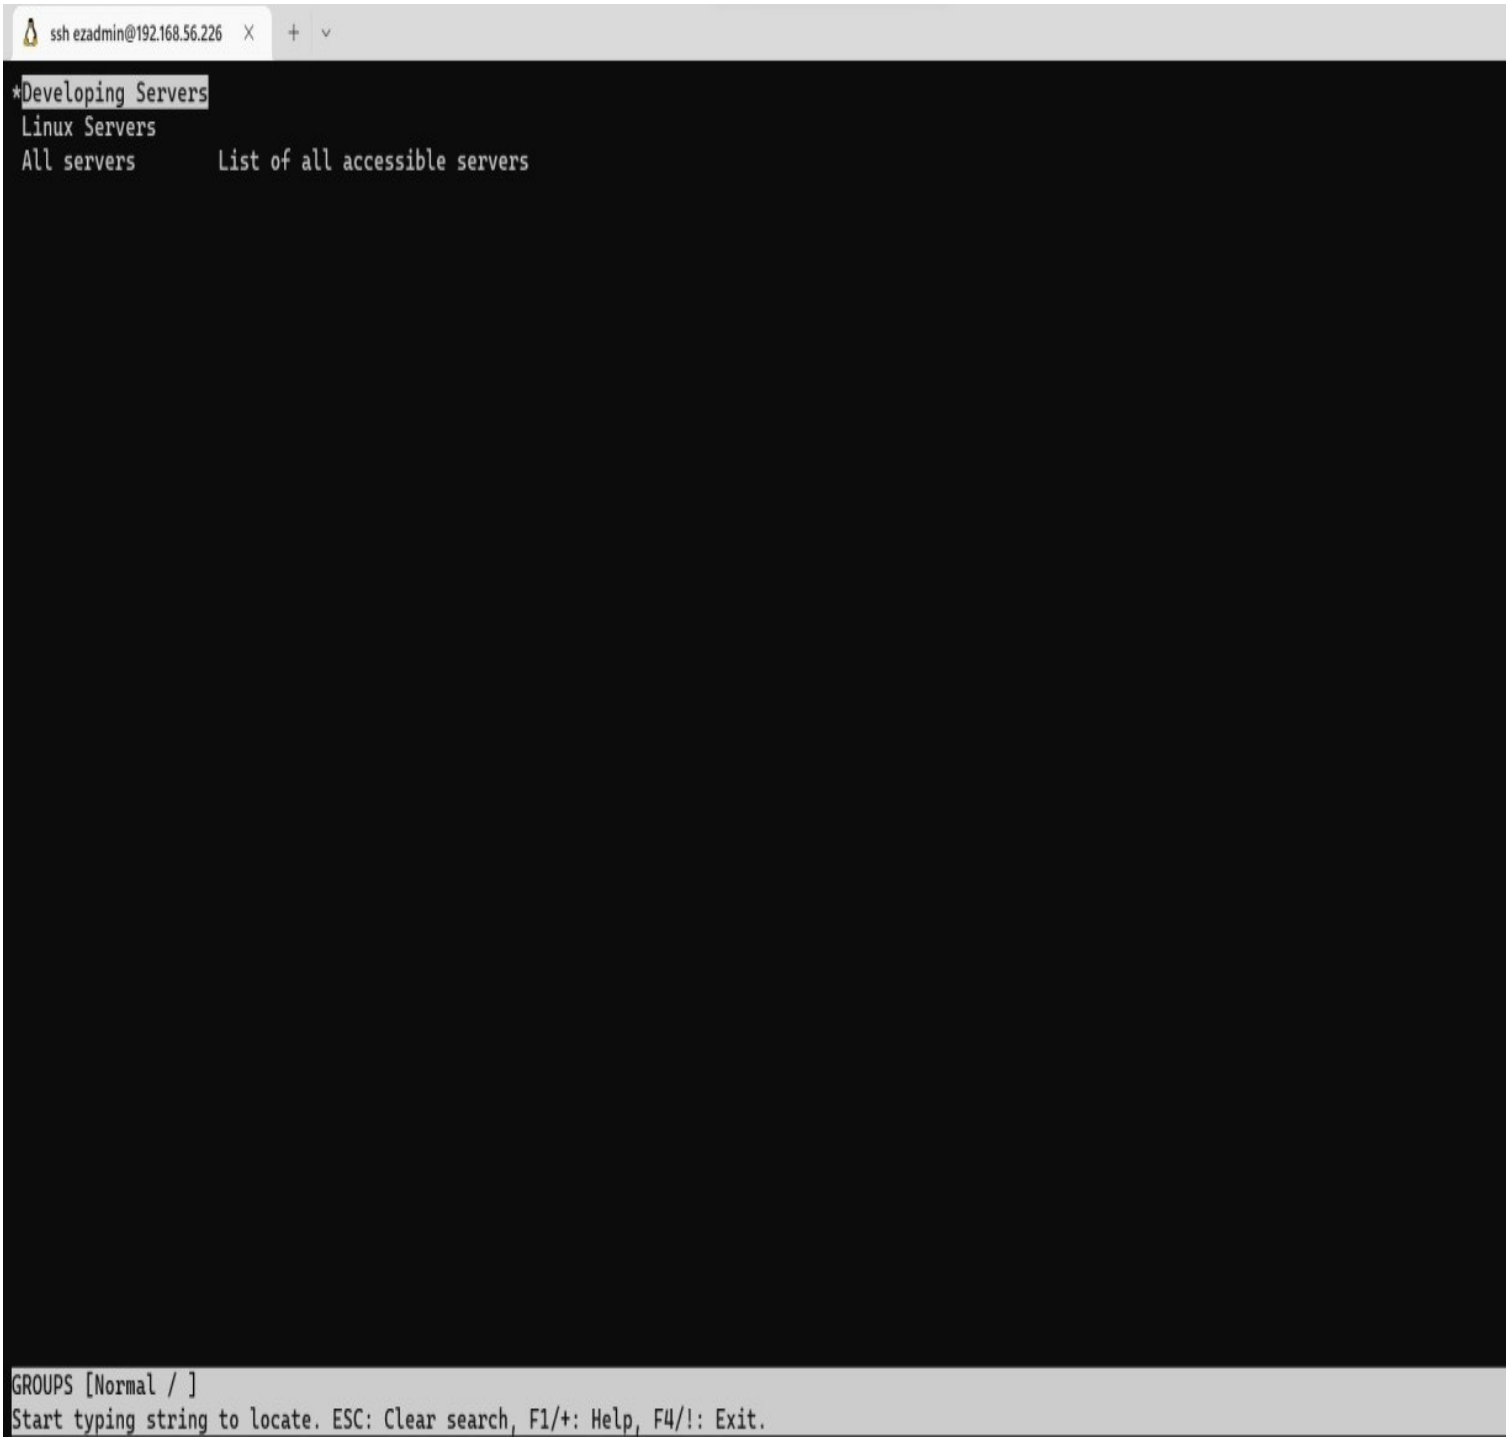
Example:

```
root@desktop:$ ssh ezadmin@192.168.56.226   or   ssh ezadmin@gateway.com
```

Step 1(A): Enter password and security code / 2fa when prompted.



ssh ezadmin@192.168.56.226
Enter Google Authenticator code:



2. SSH using webssh

Step 2(A): Login to Ezeelogin webGUI .Click on the **Web SSH Console** feature under the **Servers tab**. **Setup web ssh console** in ezeelogin
