

Authentication Log

537 Nesvin KN April 13, 2024 [Features & Functionalities](#) 2446

What is Authentication log in Ezeelogin?

- Authentication logs give you a record of authentication-related activities in your Gateway Server.
- It is a component that would help you track which gateway users have accessed the Gateway Server through the GUI and backend.
- Additionally, you would know whether the Gateway access was successful or has ended with some issues while logging in.
- Furthermore, the logs offer insights into the specific two-factor authentication (2FA) methods employed by users to access the Gateway Server.

Client Address in Web refers to the computer that is accessing or communicating with a server.

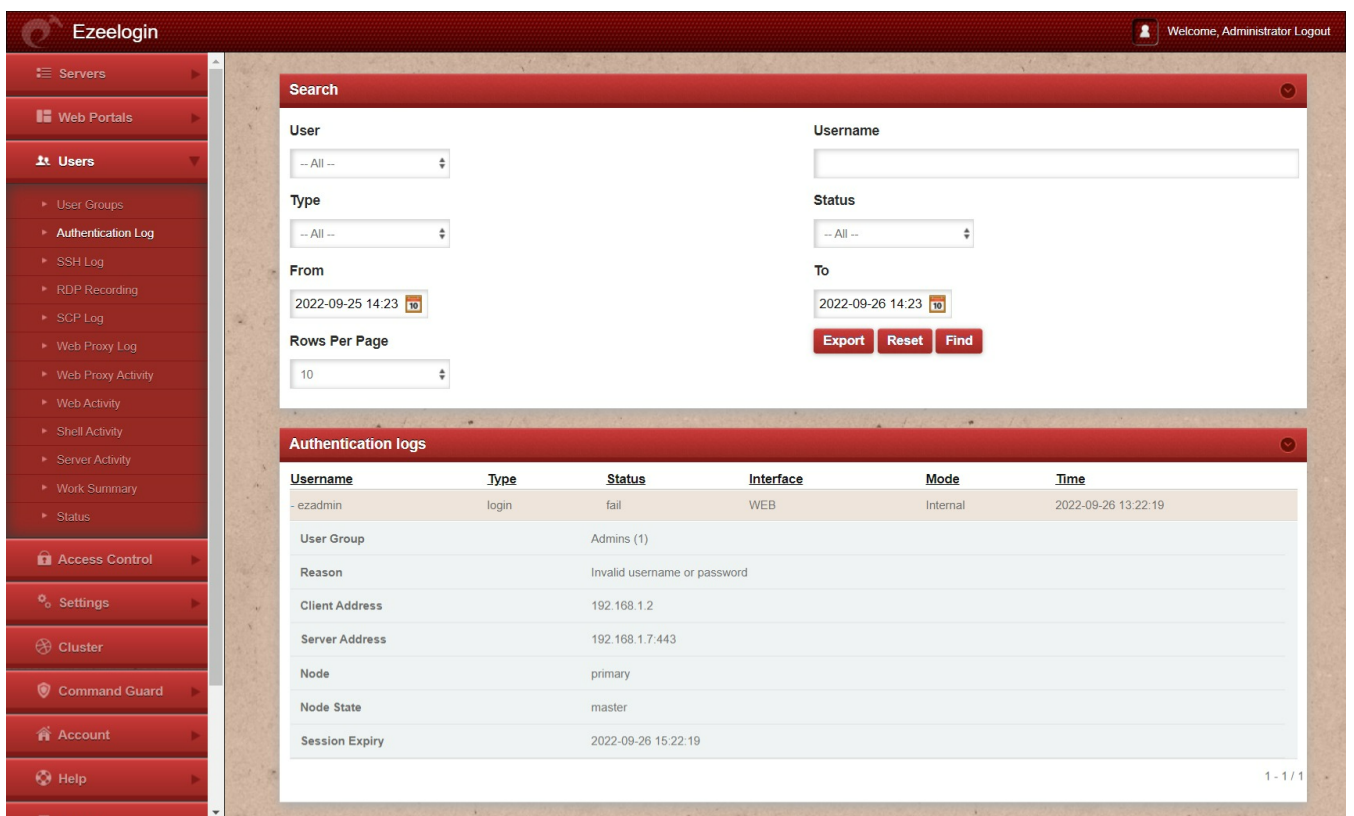

How do you view the authentication logs from the Ezeelogin GUI?

Login to Ezeelogin GUI -> Users -> Authentication Log -> Find

Refer to sample screenshots and details of the Authentication Log.

1) When a user fails to log in with the incorrect password in GUI.

2) When the user uses the wrong two-factor authentication in GUI.
