Set maximum days without login for SSH gateway users

The **Maximum Days Without Login** feature would automatically lock the account if the user has not logged in for the number of days set.
 A value of **0** means never lock the account. For example, if you want inactive accounts to be locked after 60 days then you can set 60 under **Maximum Days Without Login** So that after 60 days that user account will be locked out.
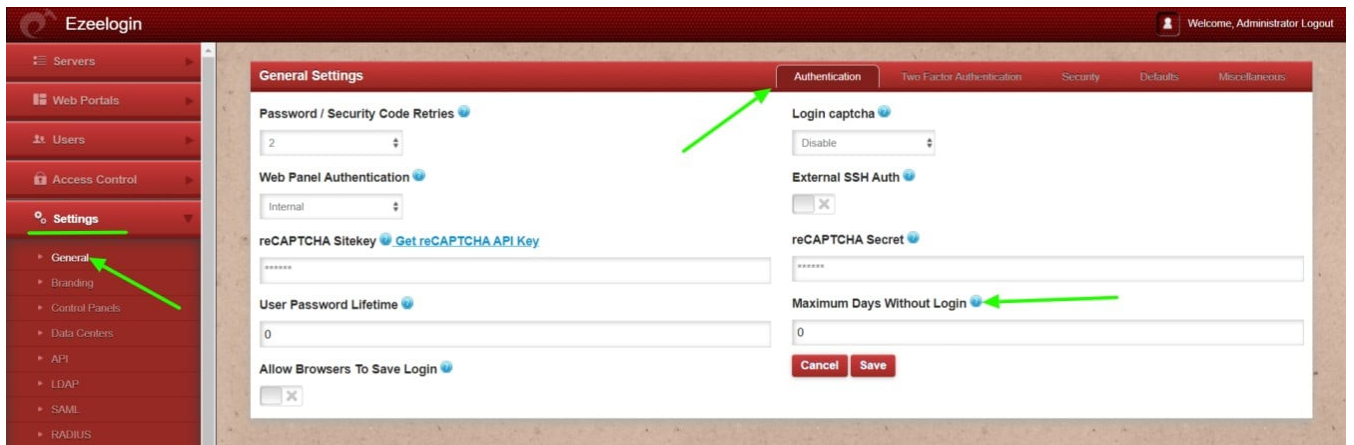

How to disable maximum days without login from the backend?

Run the below command to disable maximum days without login from the backend.
