Installing Ezeelogin SSH jump server on CentOS and Ubuntu

How to install SSH Jump server in Centos 6.x ?

Overview: This article provides installation steps for the Ezeelogin SSH jump server on CentOS 6/7/8 and Ubuntu 14/16/18, covering dependency installation, configuring services, setting the MySQL root password, and enabling PHP extensions where required.

Note: We do not recommend using Centos 6 as it is no longer supported by the Linux community with security patches, vulnerabilities, or bug fixes. Therefore, continuing to use CentOS 6 could pose a significant security risk.

Note: You can follow the **article to migrate to a Centos 7 Machine**

Enter the following command on your terminal to install ezeelogin dependency package on centos 6

```
root@gateway:~# yum -y install epel-release httpd openssl php php-mysql php-process php-common php-cli php-mcrypt bzip2 mod_ssl mysql mysql-server php-ldap git ; yum install php-mcrypt
root@gateway :~# service mysqld start
```

Make sure that web server and SQL server startup on boot

```
root@gateway:~# chkconfig mysqld on
root@gateway:~# chkconfig httpd on
```

Set the root password with following command

```
root@gateway:~# mysql_secure_installation
```

How to install SSH Jump server in Ubuntu 14.x ?

Enter the following command on your terminal to install ezeelogin dependency package on Ubuntu 14

```
root@gateway:~# apt-get update; apt-get install php5 apache2 mysql-server libapache2-mod-php5 php5-curl php5-mysql php5-mcrypt php5-ldap nodejs git
```

Enable php-mcrypt extension by following command

```
root@gateway:~# php5enmod mcrypt
```

How to install SSH Jump server in Ubuntu 16?

Enter the following command on your terminal to install the ssh jump server dependency package on Ubuntu 16.

```
root@gateway:~# apt update ; apt-get install php mysql-server apache2 php-mcrypt libapache2-mod-php7.0 php-mysql php-curl php7.0-xml php-ldap nodejs git
```

> Refer article to increase script execution time for PHP
>
> **Increase script execution time in Ubuntu and CentOS**

Enter the following command on your terminal to install the Ezeelogin ssh jump server dependency package on Ubuntu 18.

```
root@gateway:~# apt update ; apt-get install php mysql-server apache2 libapache2-mod-php7.2 php-mysql php-curl php7.2-xml php7.2-ldap nodejs git
```

Note: If you want to install php-mcrypt (For older ezeelogin versions [Below 7.20.0 version]

```
root@gateway:~#  apt install php-dev libmcrypt-dev php-pear ; apt-get -y install gcc make autoconf libc-dev pkg-config

root@gateway:~#  apt-get -y install php7.2-dev ; apt-get -y install libmcrypt-dev

root@gateway:~#  sudo pecl install mcrypt-1.0.3

root@gateway:~#  echo "extension=mcrypt.so" >> /etc/php/7.2/cli/php.ini
```

Refer detailed article to **compile and install php-mcrypt.**

Set the root password with the following command

```
root@gateway:~#  mysql_secure_installation
```

> Refer article to increase script execution time for PHP

How to install SSH jump server in Ubuntu 18?

Enter the following command on your terminal to install the Ezeelogin ssh jump server dependency package on Ubuntu 18.

```
root@gateway:~# apt update ; apt-get install php mysql-server apache2 libapache2-mod-php7.2 php-mysql php-curl php7.2-xml php7.2-ldap nodejs git
```

Note: If you want to install php-mcrypt (For older ezeelogin versions [Below 7.20.0 version]

```
root@gateway:~#  apt install php-dev libmcrypt-dev php-pear ; apt-get -y install gcc make autoconf libc-dev pkg-config

root@gateway:~#  apt-get -y install php7.2-dev ; apt-get -y install libmcrypt-dev

root@gateway:~#  sudo pecl install mcrypt-1.0.3

root@gateway:~#  echo "extension=mcrypt.so" >> /etc/php/7.2/cli/php.ini
```

Refer detailed article to **compile and install php-mcrypt.**

Set the root password with the following command

```
root@gateway:~#  mysql_secure_installation
```

> Refer article to increase script execution time for PHP
>

How to install SSH Jump server in Centos 7?

Enter the following command on your terminal to install the Ezeelogin dependency package on Centos 7

```
root@gateway:~#  yum -y install epel-release httpd openssl php php-mysql php-process php-common php-cli php-mcrypt mariadb-server bzip2 mariadb mod_ssl php-ldap nodejs git; yum -y install php-mcrypt

root@gateway:~#   service mariadb start
```

Make sure that the web server and SQL server startup on boot

```
root@gateway:~#  systemctl enable mariadb

root@gateway:~#  systemctl enable httpd
```

Set the root password with the following command

```
root@jumpserver:~#    mysql_secure_installation
```

> Refer article to increase script execution time for PHP
>
> **Increase script execution time in Ubuntu and CentOS**

How to install SSH Jump server in Centos 8?

> **Note: Supported from Ezeelogin 7.22.0 version**

Enter the following command on your terminal to install the Ezeelogin dependency package on Centos 8

```
root@gateway:~#  yum -y install  httpd openssl php php-mysqlnd php-process php-common php-cli php-json mariadb-server bzip2 mariadb mod_ssl php-ldap nodejs npm git

root@gateway:~#  service mariadb start
```

Make sure that web server and SQL server startup on boot

```
root@gateway:~#  systemctl enable mariadb

root@gateway:~#  systemctl enable httpd
```

Set the root password with the following command

```
root@gateway:~#  mysql_secure_installation
```
