An error occurred. Please contact administrator.Connection to server.hostname closed.

I get the following error on login " An error occurred. Please contact the administrator. Connection to server. hostname closed."

[root@gateway:~#](#) cd /home/username

[root@gateway:~#](#) tail ezsh.log

This should get the answers for the error.

Usually, it could be because of the **MySQL server being down**, **no free disk space, permission errors** in writing to the log files /var/log/ezeelogin, etc.
