Adding WebPortal or control panel or datacenter for autologin

6 admin March 31, 2026 Productivity & Efficiency Features

How to add a Web portal or Control Panel and Export/Import Web portals in Ezeelogin?

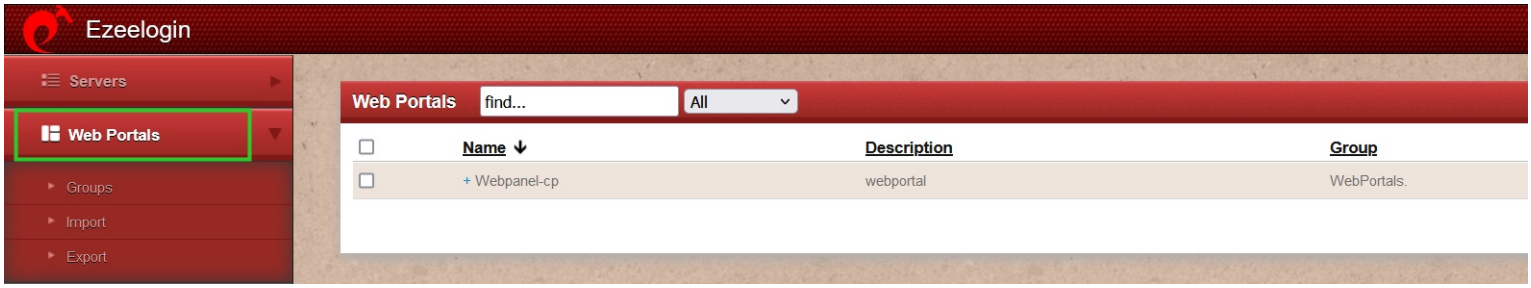

Overview: This article provides step-by-step instructions for adding web portals or control panels for autologin, as well as exporting and importing web portals in Ezeelogin.

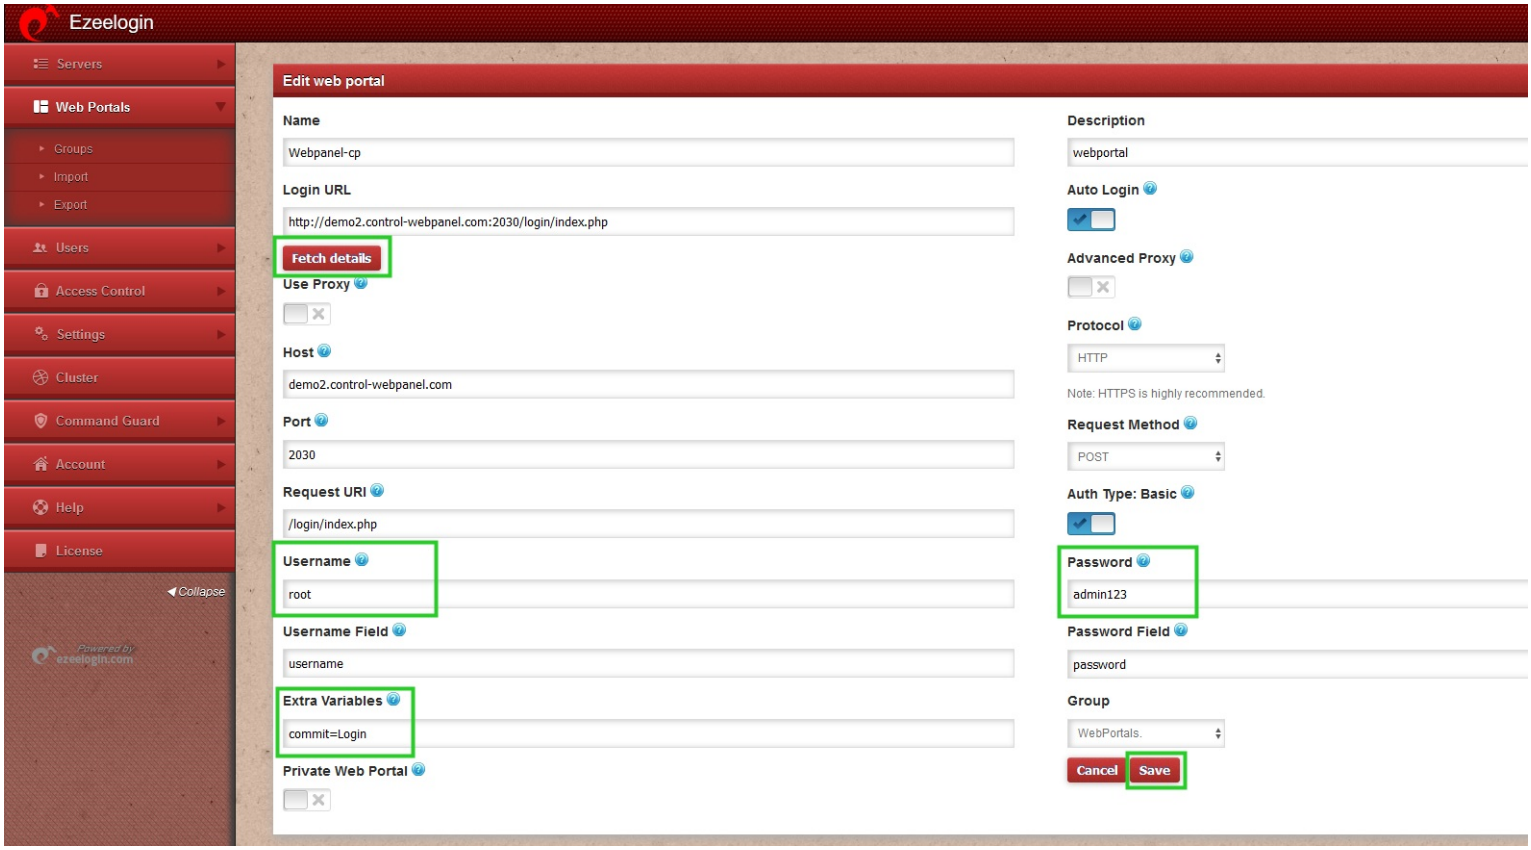

G

1. How do you add a web portal?

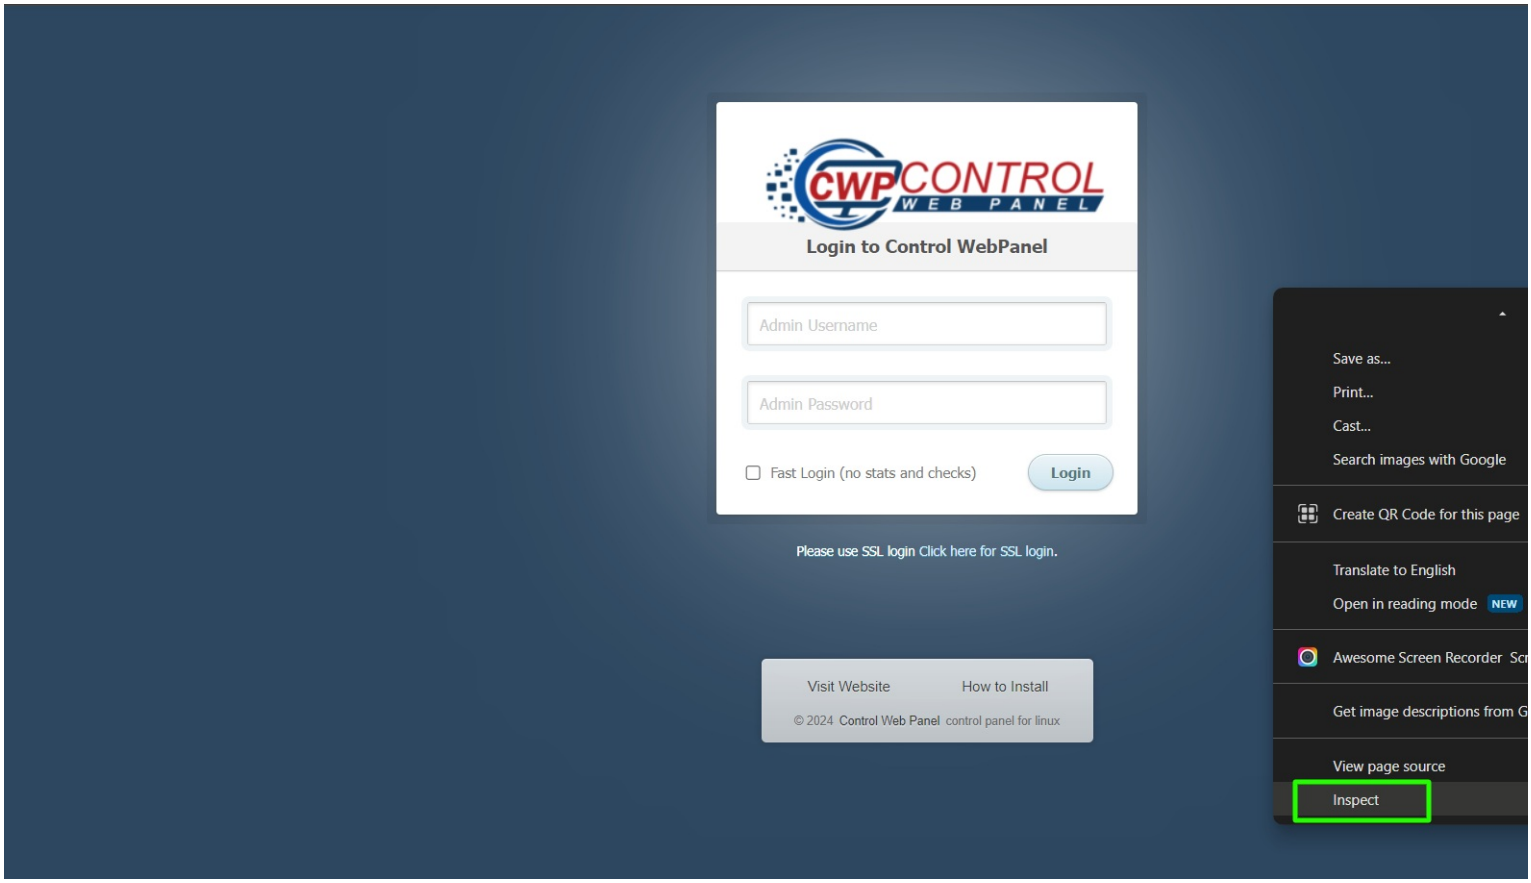

Step 1(A): Login to **Ezeelogin GUI** > Click on **Web Portals tab** > **Add new Web Portal.**

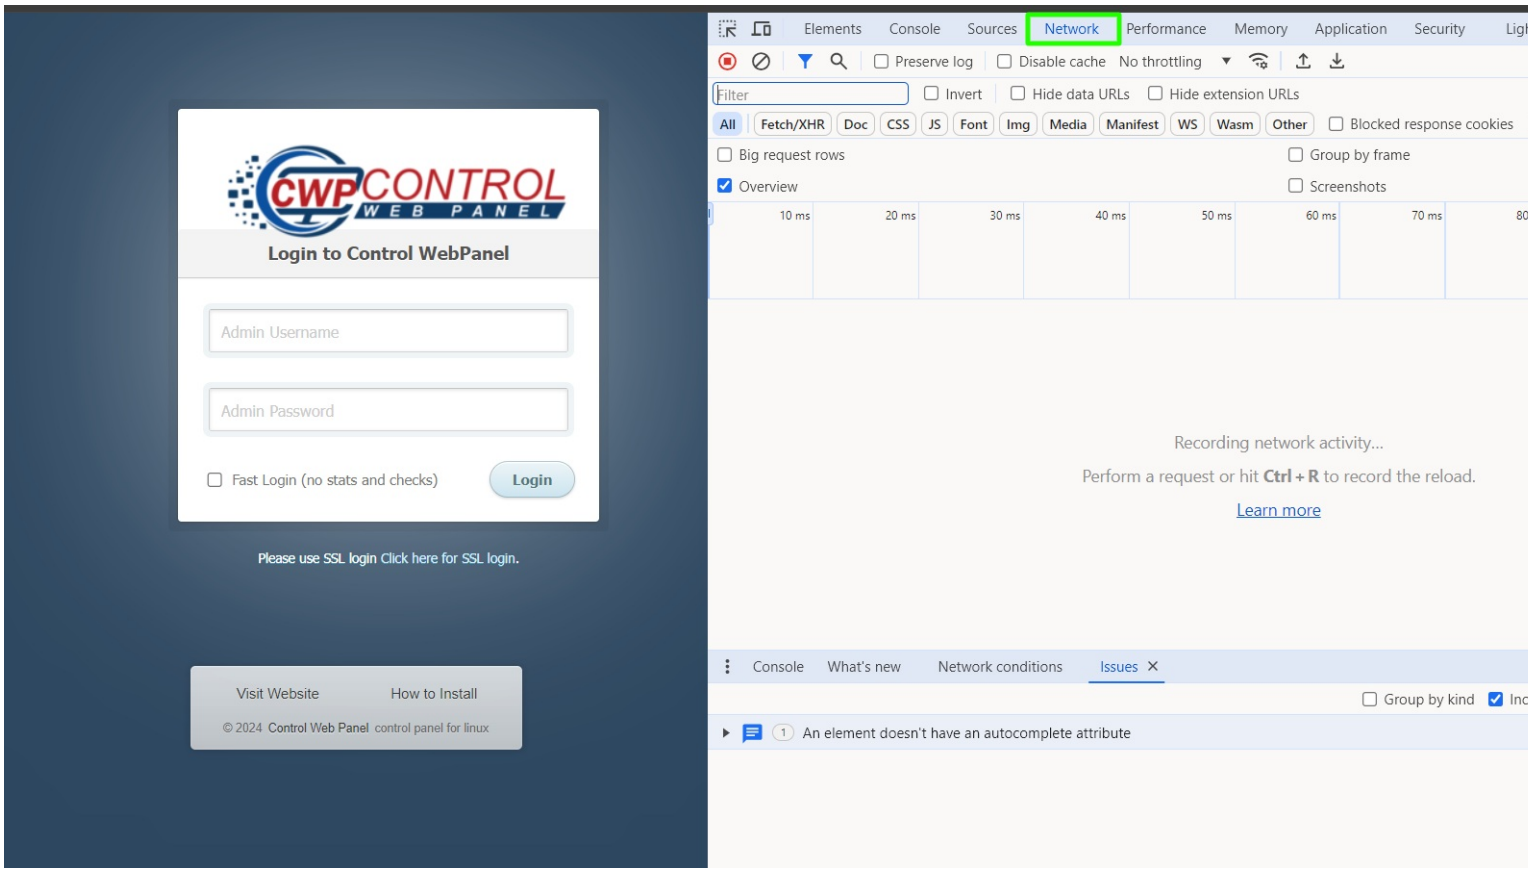

Step 1(B): Paste the login URL and then click on Fetch details. The details of the web portal will automatically get fetched. Fill in the remaining fields like Extra Variables, Username, and Passw

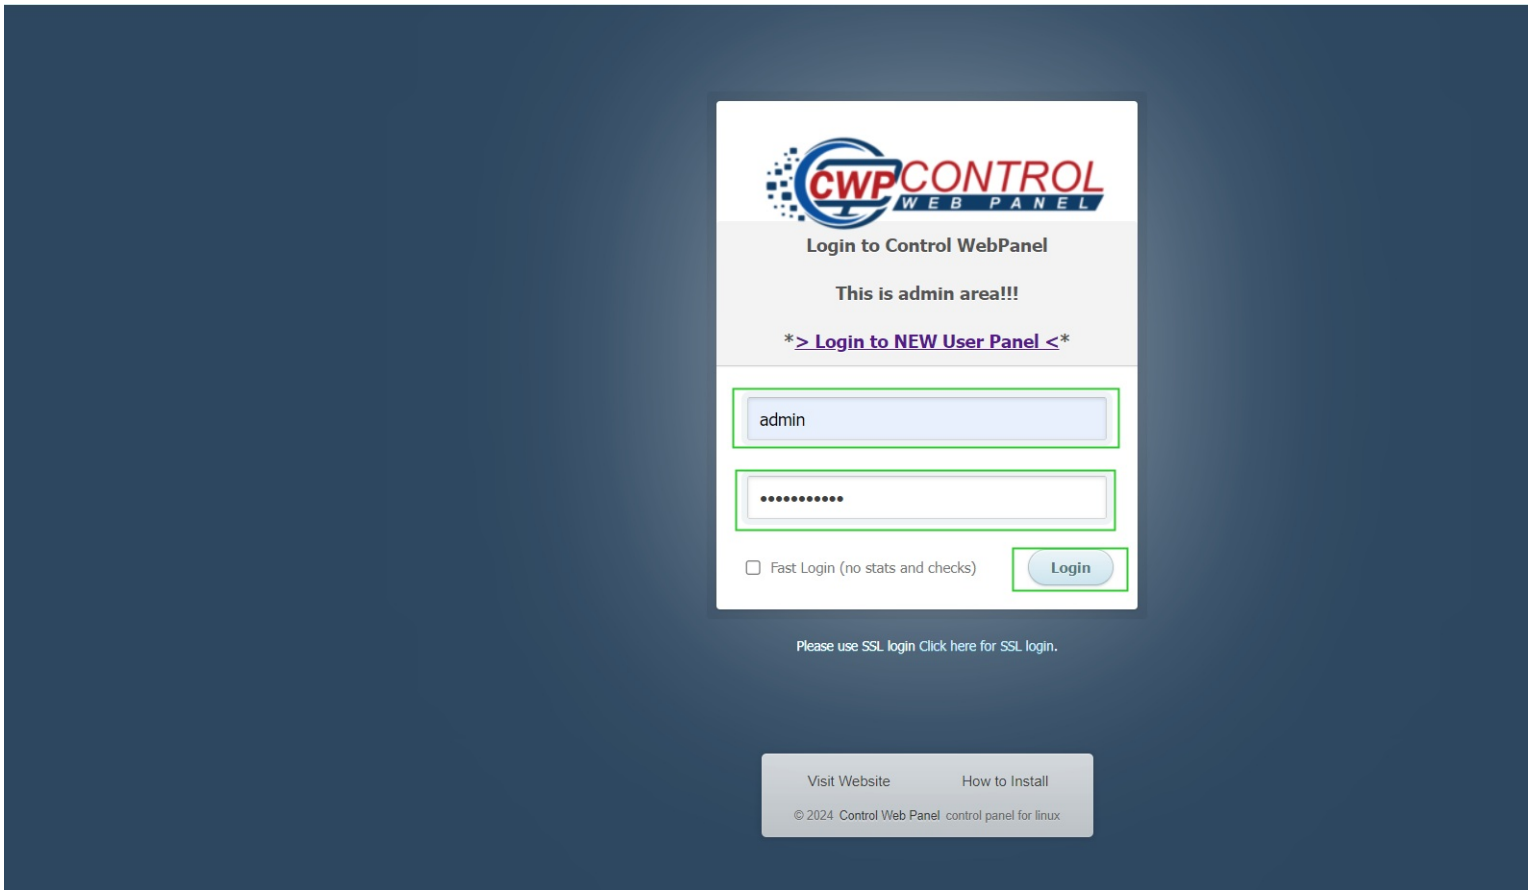

Step 1(C): If the details are not fetched automatically enter the details manually. To get the details open the **login page** of the **web portal** you are adding **right-click** on the page. From the

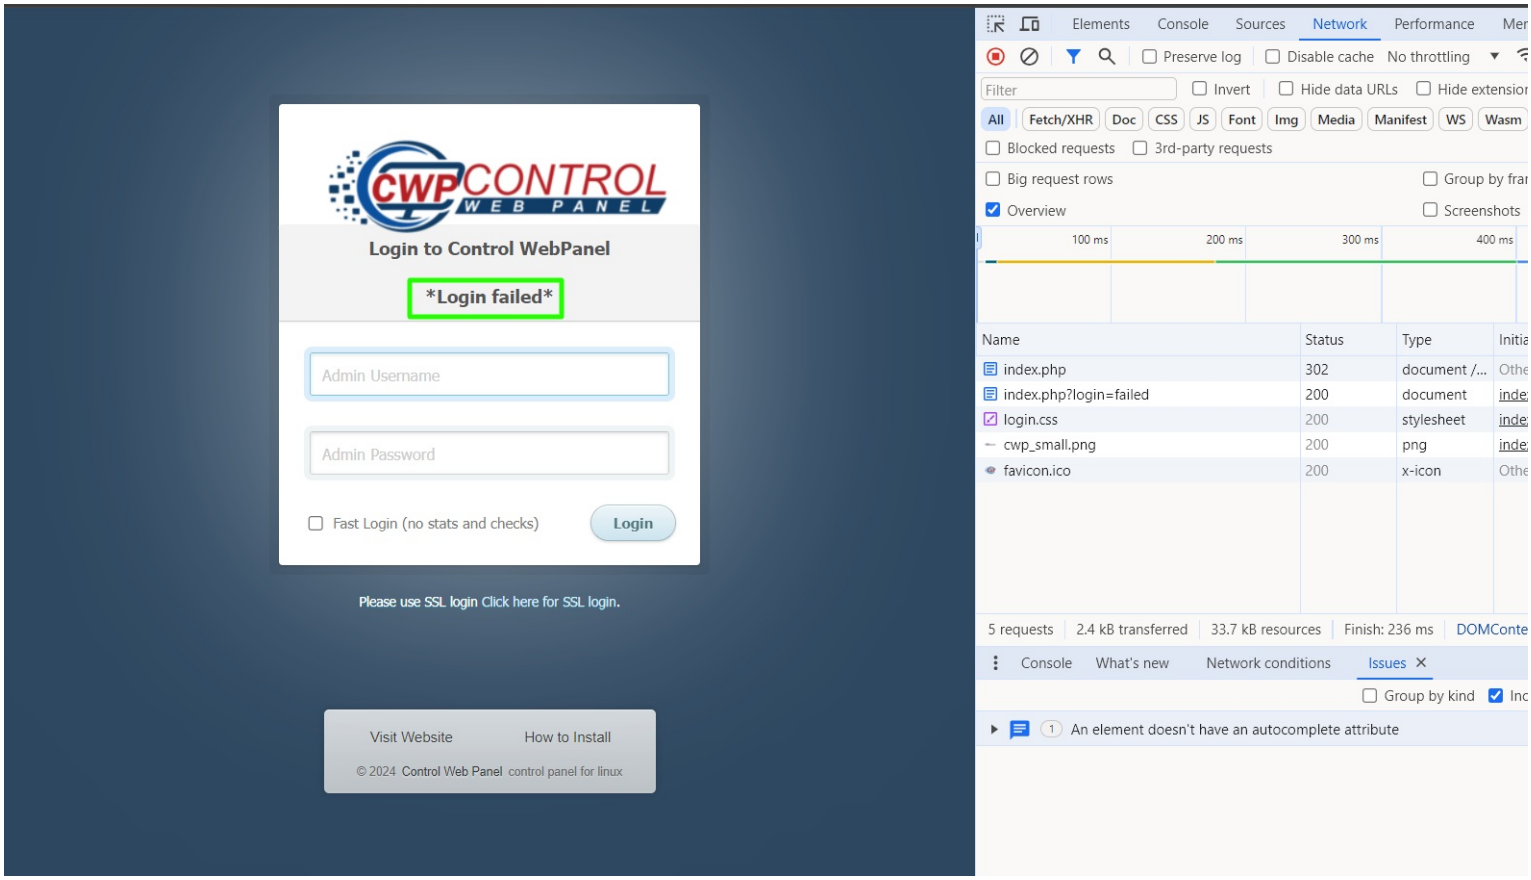

Step 1(D): Open the **Network tab** in the Developer Tools.

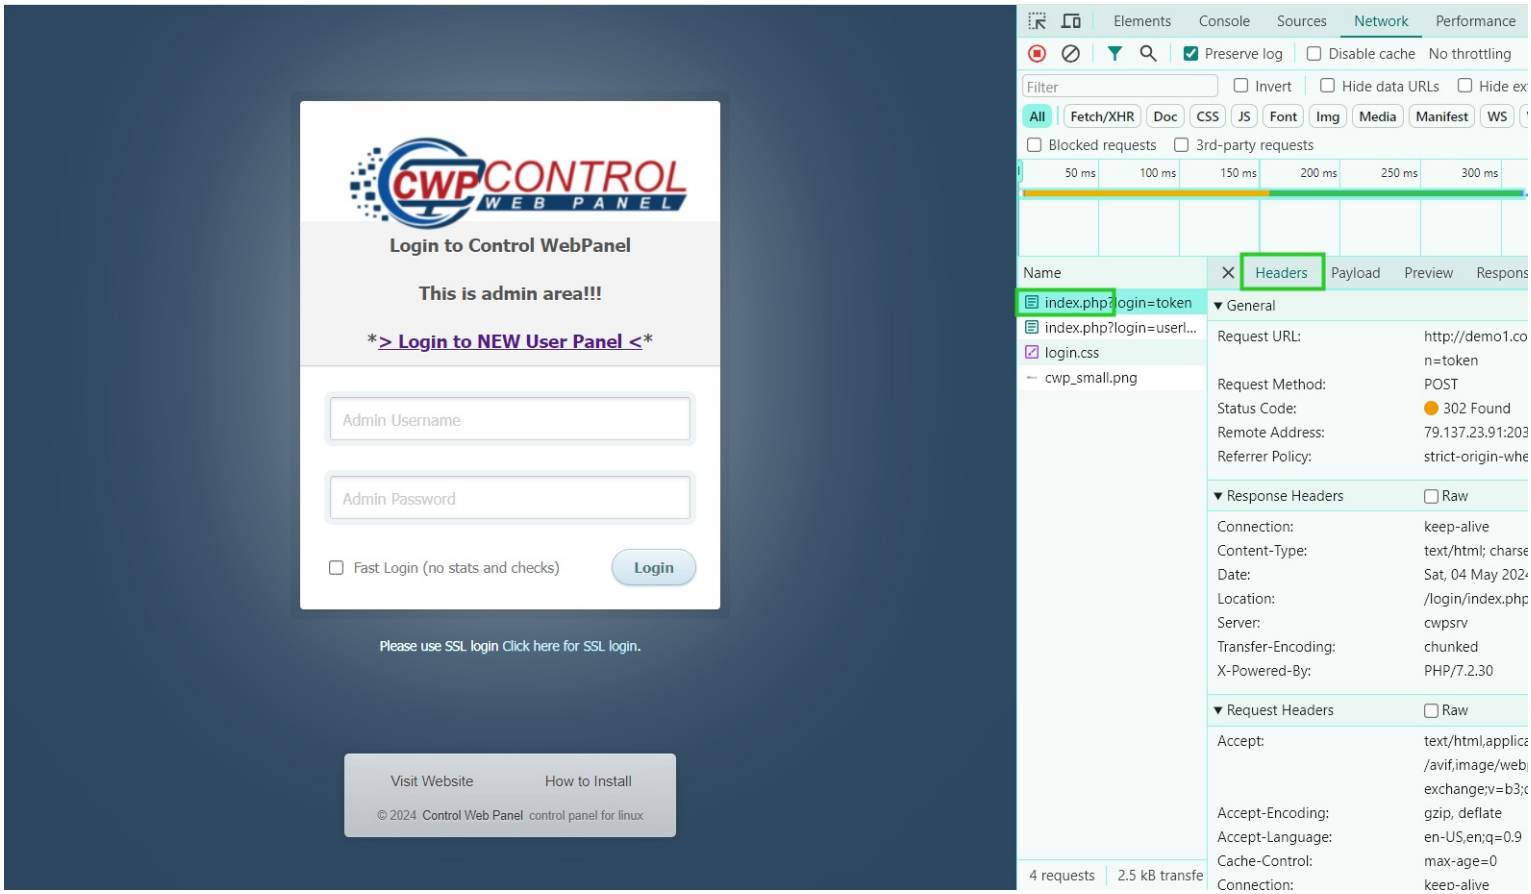

Step 1(E): Enter any random **username** and **password** in the respective form fields and click on Login.

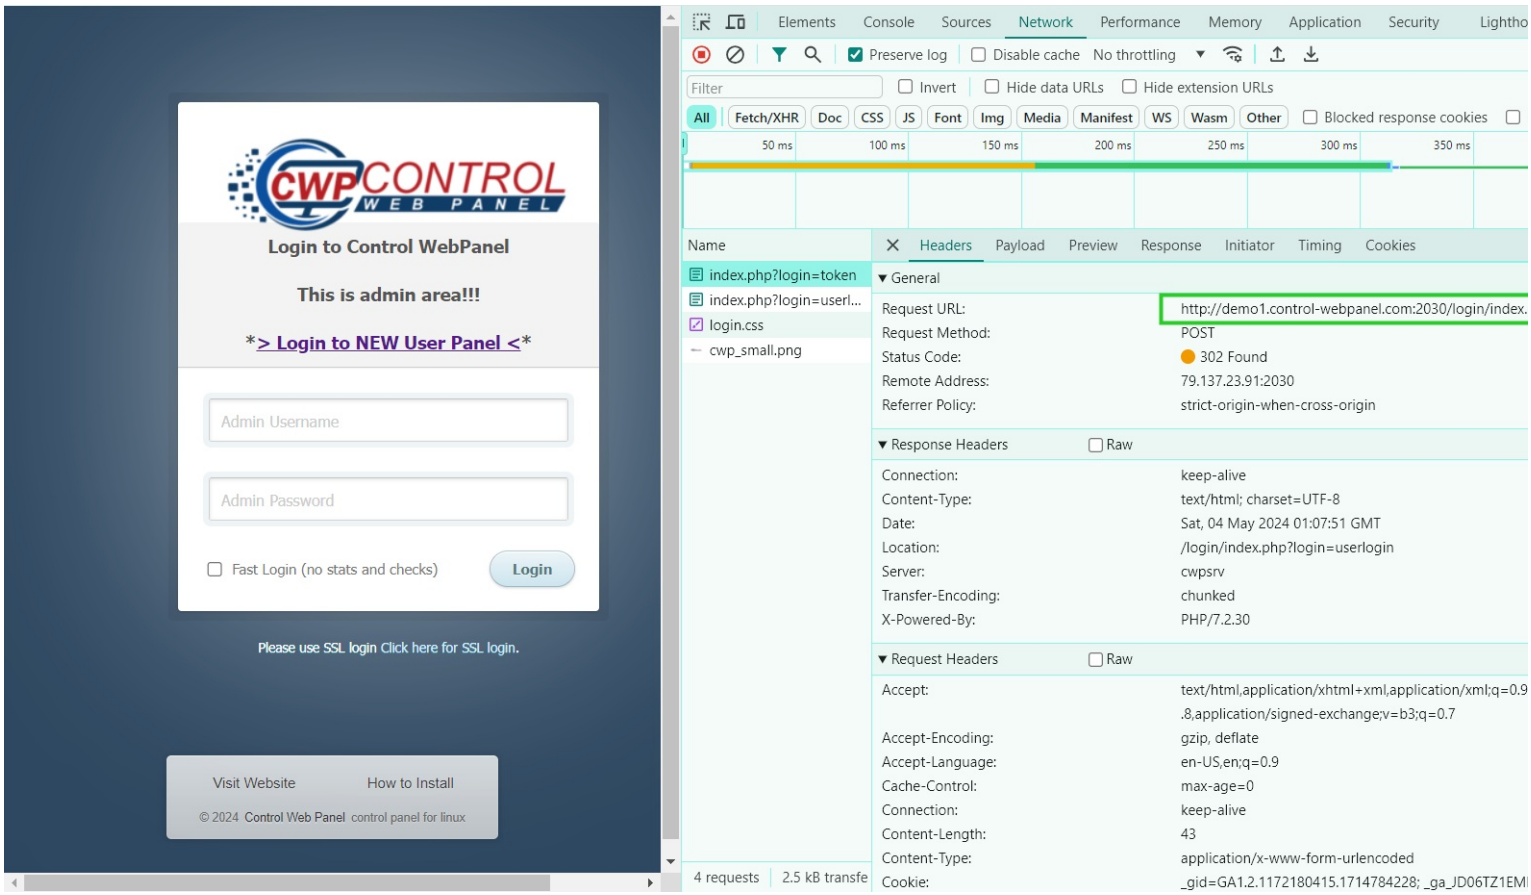

Step 1(F): Wait till the process is complete (e.g. login failed message if you entered a random username and password).

Step 1(G): Select the first one(**index.php**) in the name list and open the **Header tab**.

Step 1(H): You can find the **Request URL** from the general section of the **"headers tab**". It will contain the **protocol** (HTTPS or HTTP), **hostname** or **IP**, and **port** (if not the default for protoc

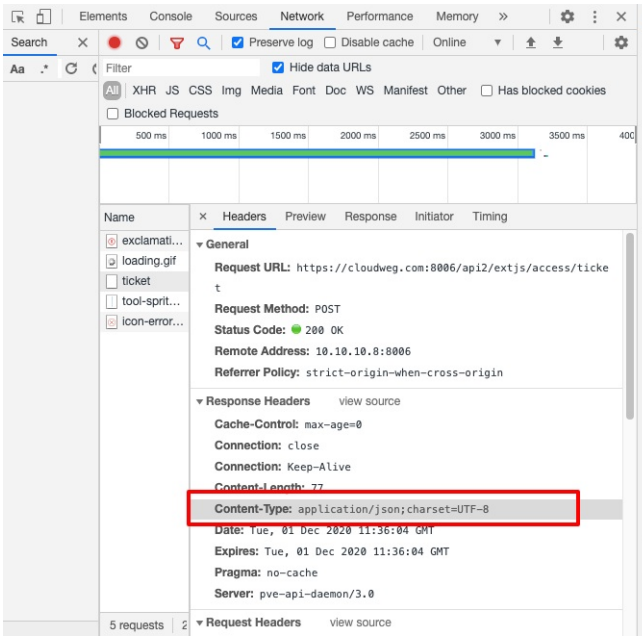

Step (I): Scroll the header or **payload tab** and you can find **username** and **password** field names. Check the values of parameters for the random string you entered for the username and pa

Step 1(J): The remaining parameters should go into the extra variables field (**commit=Login**)while adding the web portal. If there are some random value parameters, they may be ignored. When

It may not work in all cases such as when the login is javascript-based or when it uses certain dynamic security tokens.

The screenshot below refers to an example of a JSON-based web portal.

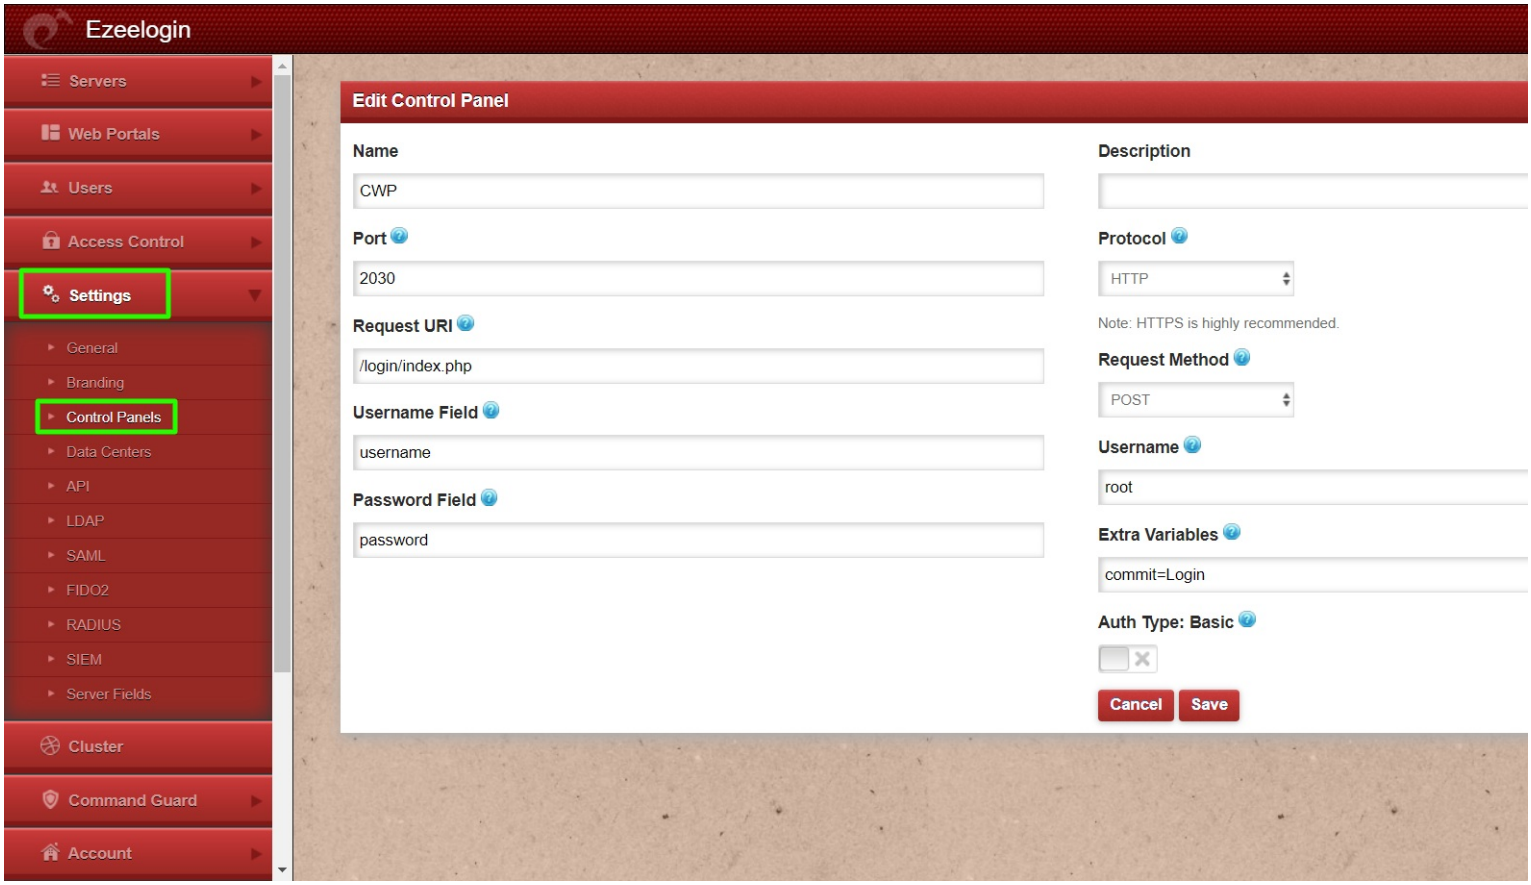

Step 1(K): After saving try to log in to the web portal.

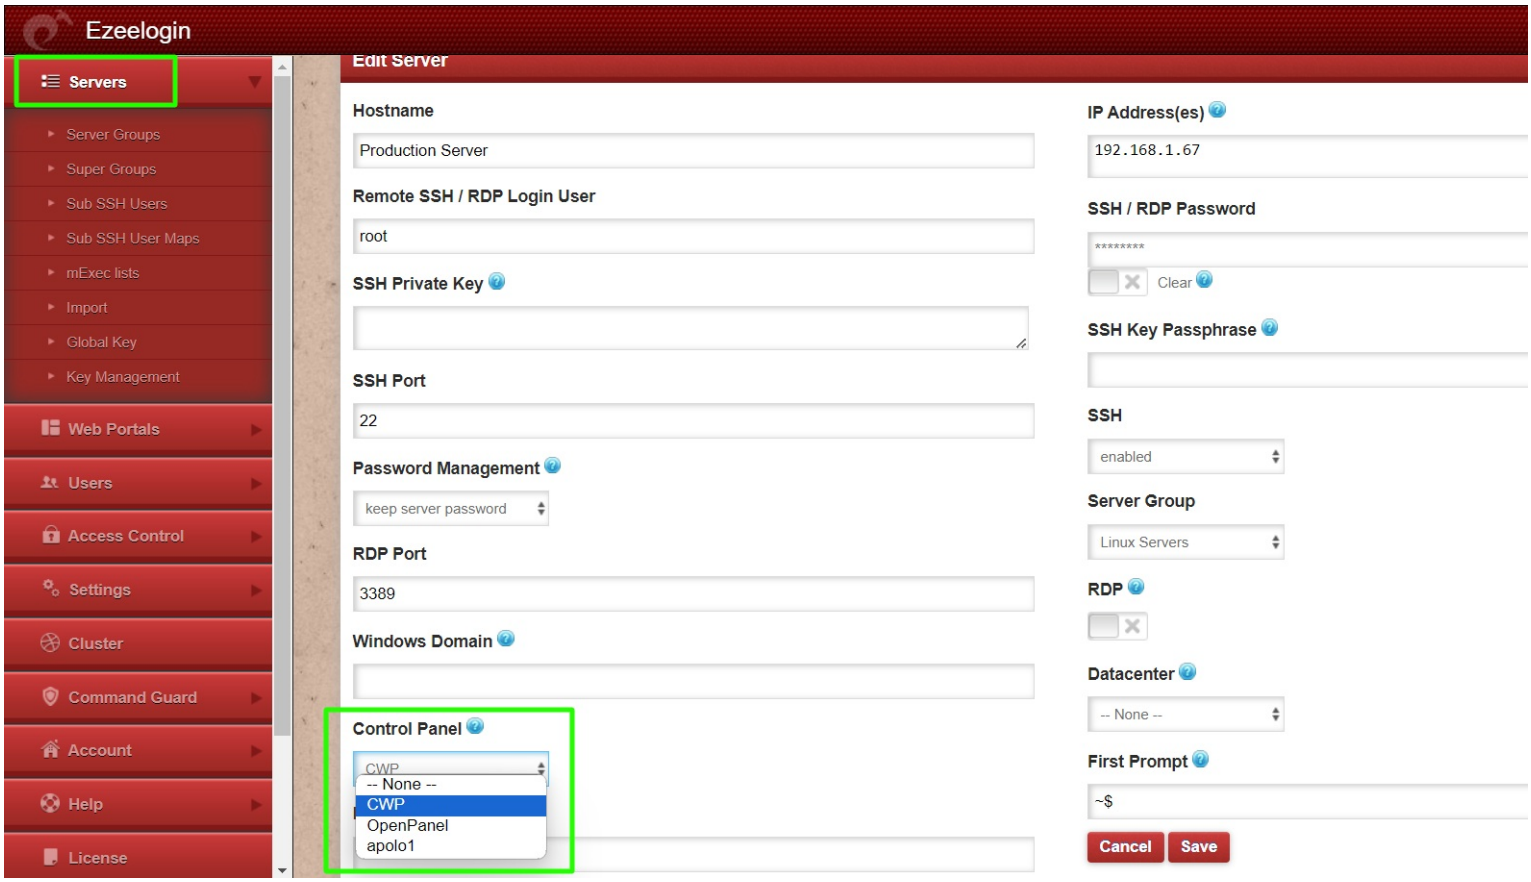

2. How do you add a control panel?

Step 2(A): Login to **Ezeelogin GUI** -> **Settings** -> **Control Panel**. You can use the screenshot below as an example to add a Control panel.

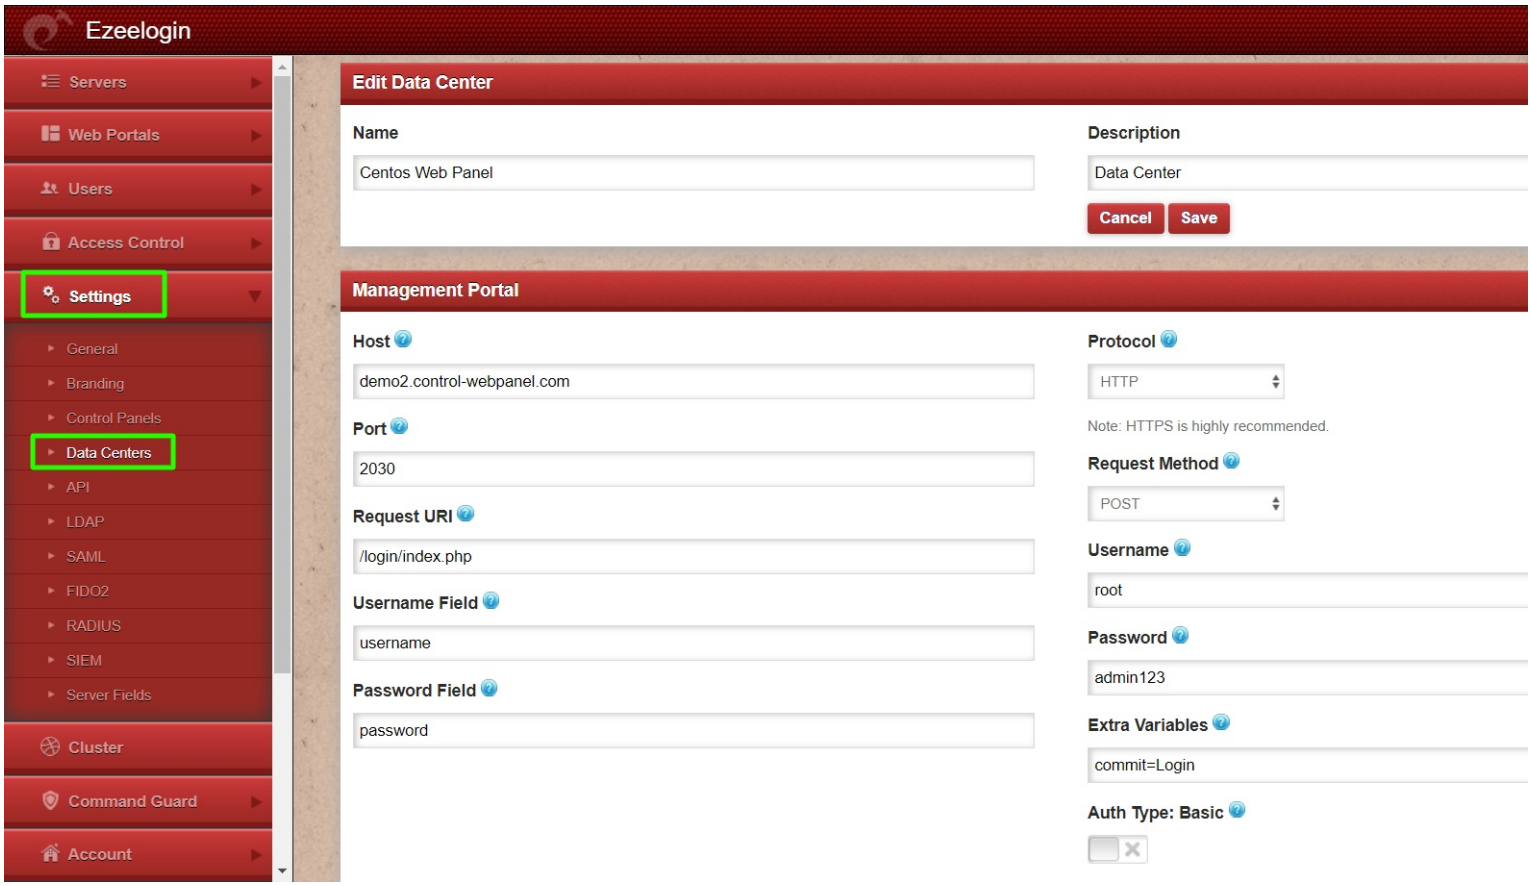

Step 2(B): Go to the Servers tab and select the control panel from the drop-down menu.

Step 2(C): After saving try to log in to the control panel.

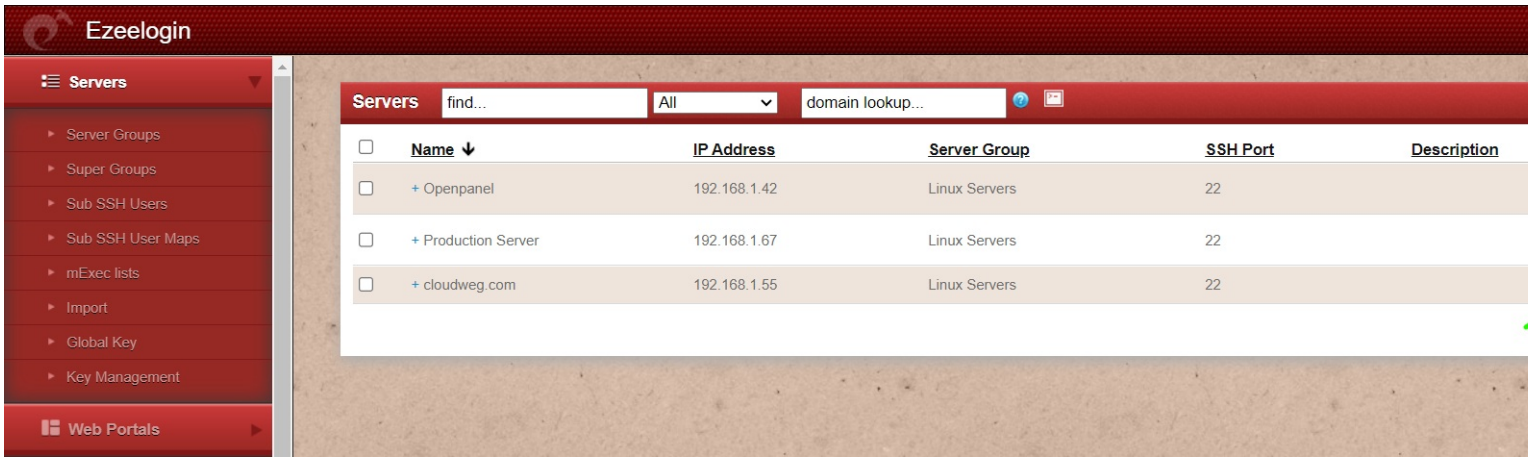

3. How to add Datacenter?

Step 3(A): Login to **Ezeelogin GUI** -> **Settings** -> **Data centers**. Refer below screenshot for an example of adding data centers.

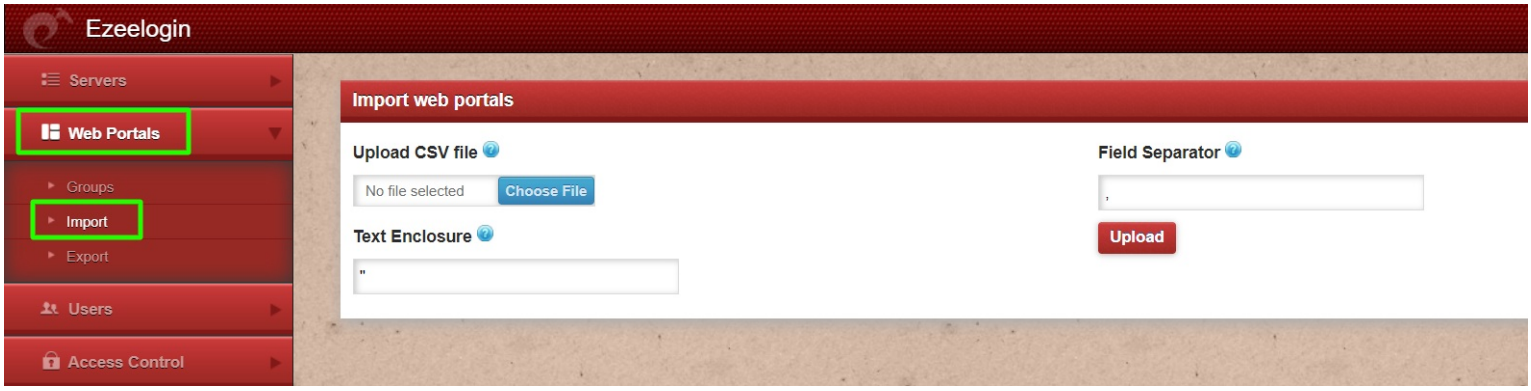

Step 3(B): Go to the Servers tab and select the data center from the drop-down menu.

Step 3(C): After saving try to log in to the data center.

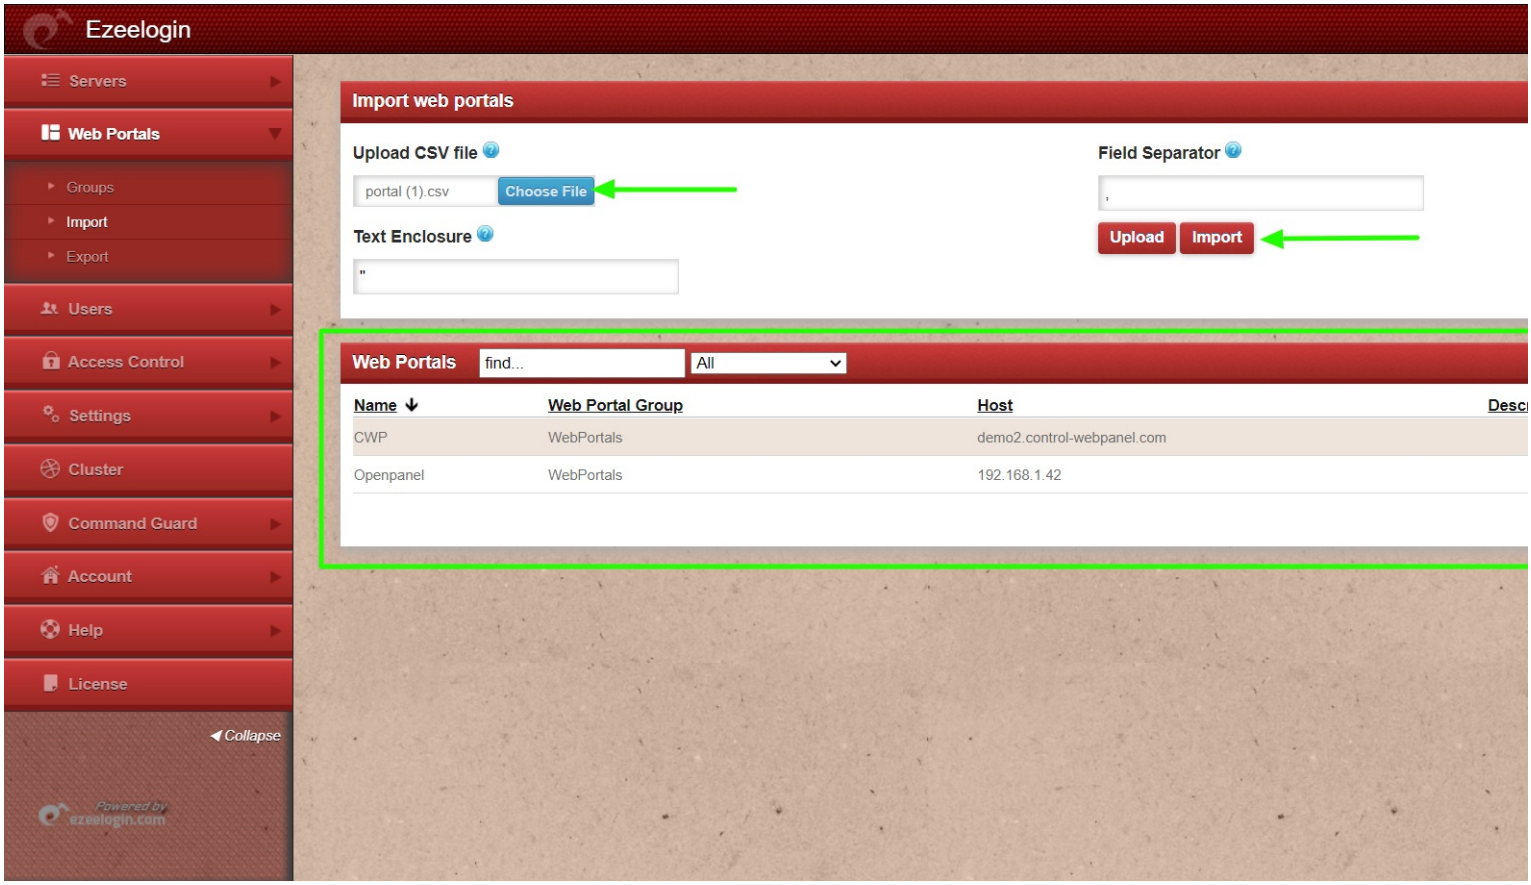

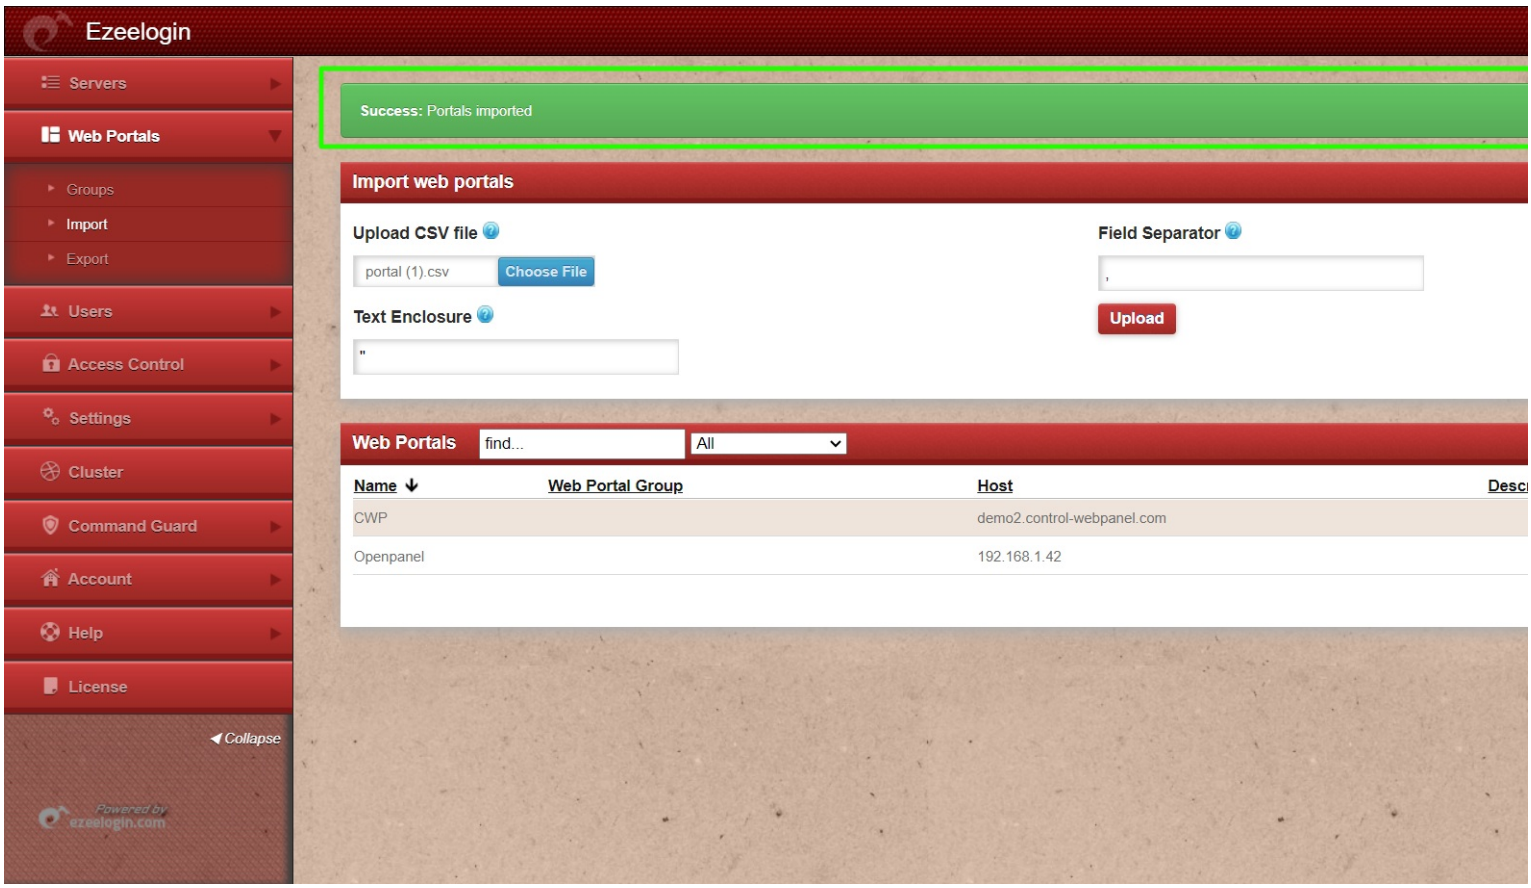

4. How to import Web Portals?

Step 4(A): To import a web portal into the Ezeelogin GUI, navigate to the **Web Portals -> Import tab**

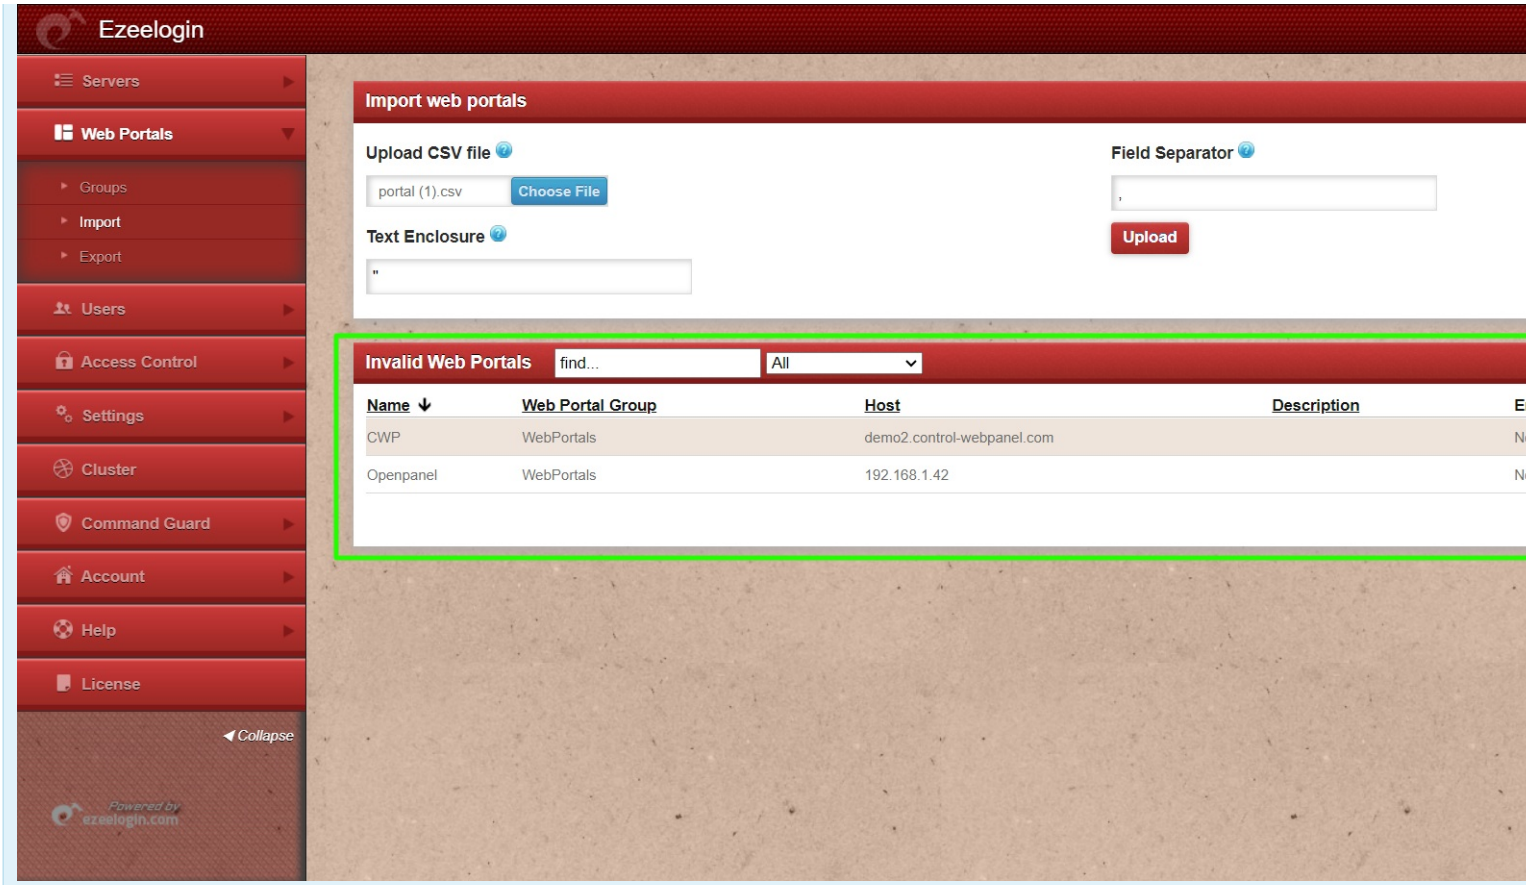

Step 4(B):. Select the **CSV** file and click on "**Upload**". After uploading the file, an "**Import**" button will appear. Click on the "**Import**" button to proceed.

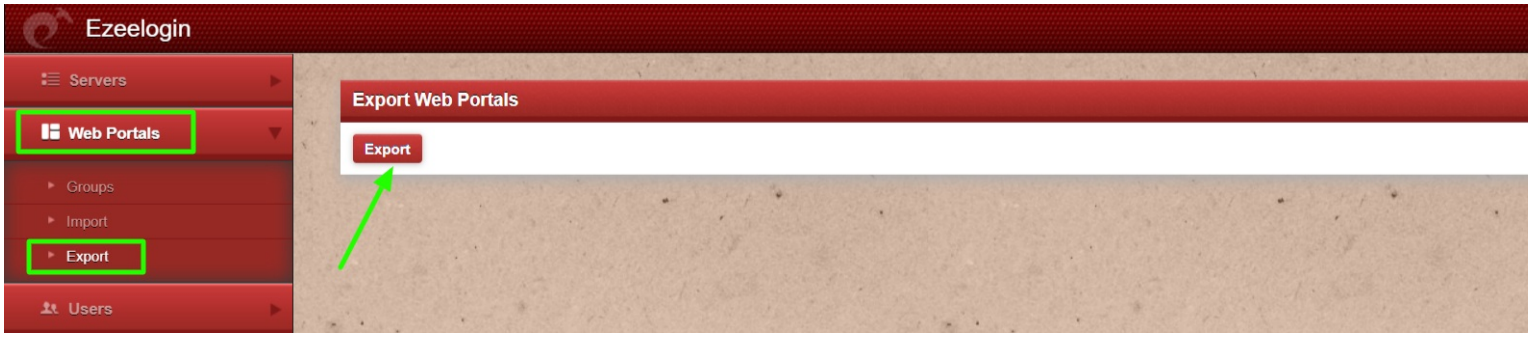

If you encounter the following error while importing a CSV file, ensure that the web portal group created in the Ezeelogin GUI matches the group to which the web portal

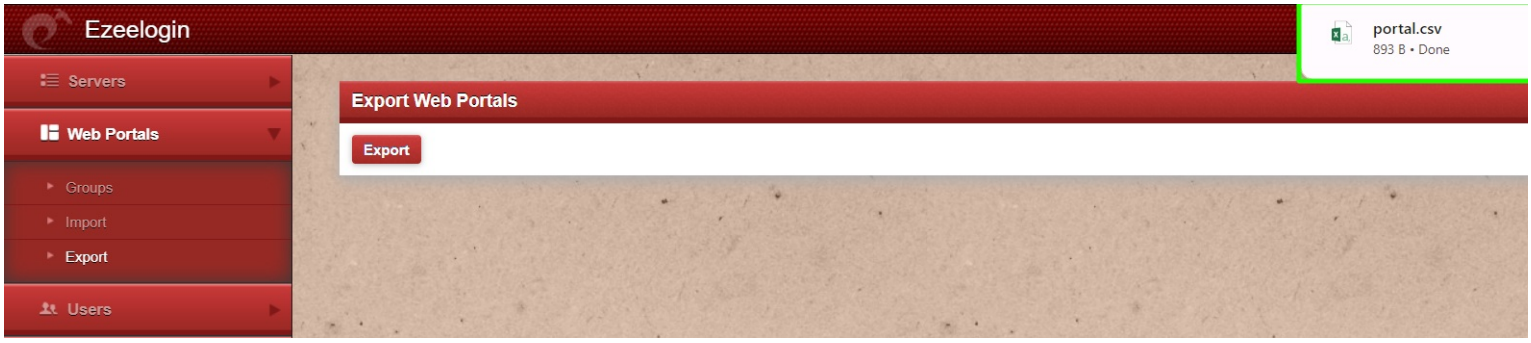

5. How to export Web Portals?

Step 5(A): To Export the web portals click on **Web Portals -> Export tab.**

Step 5(B): Web portals will be exported in CSV format and downloaded to the desktop.

cat portal.csv

```
"name","portalgroup","description","host","protocol","port","request_uri","request_method","user_field","user_field_selector","username","passwd_field","passwd_field_selector","passwo
"cpanel-2","portal group",,"demo3.control-webpanel.com","http","2030",,"POST","username",,"root","password",,"admin123",,,"N",,"http://demo3.control-webpanel.com:2030",,,"N",,,"N","N"
```

Troubleshooting steps

Step1: Ensure that Node version is above 19, Kernal >= 4 and NPM Version is >=6

```
root@gateway:~# npm -v
6.14.6
root@gateway:~# node -v
v21.6.2
```

Step 2: To get more detailed errors, append **log_level trace** in ez.conf.

Step 3: After, kill the current running node

```
root@gateway:~# pkill node
```

Step 4: Run the below command to get the webportal start command from the latest log file, and then append **DEBUG=*** at the beginning of the command you get:

```
root@gateway:~# ( cd $(awk '/^system_folder/ {print $2}' /usr/local/etc/ezlogin/ez.conf)/application/logs/ && less $(ls -t log-*.php | head -n 1) ) | grep -i 'Web Proxy node: PORT'

DEBUG - 2025-05-27 10:19:43 --> start Web Proxy node: PORT=52666 XFWD=1 WS=1 SESSION_TIMEOUT=300000 REQUEST_TIMEOUT=120000 DBP='s}T@2Wrbu(33Ab@@*
```

For example:

```
root@gateway:~# DEBUG=* PORT=52666 XFWD=1 WS=1 SESSION_TIMEOUT=300000 REQUEST_TIMEOUT=120000 DBP='s}T@2Wrbu(33Ab@@*6Z.m9D@!7' PUPPETEER
```

Contact our **support department** if you face any further difficulties.
