

View client username and IP in remote server

600 Nesvin KN July 17, 2023 [Features & Functionalities](#) 809

How to view the client username and IP address in the production servers?

This feature is available from Ezeelogin version 7.31.0.

1. Login to the **remote server** added in Ezeelogin and append the below line in the sshd configuration file.

2. Login to the remote server via Ezeelogin and run the below command to **view the client username and IP address**.

How can the client username and IP address be viewed on all the production servers?

1. Login to the **Ezeelogin shell (ezsh)** and start the **parallel shell** (click on *) and select **all servers**.

[Parallel Shell - How to use it?](#)

2. Run the below command in the parallel shell.

3. Exit the **parallel shell** (click on _) and login to the **remote server** and run the below command to **view the client username and IP address**.
