Error: Cannot find host

606 admin March 26, 2025 Common Errors & Troubleshooting 3337

Error: Cannot find host

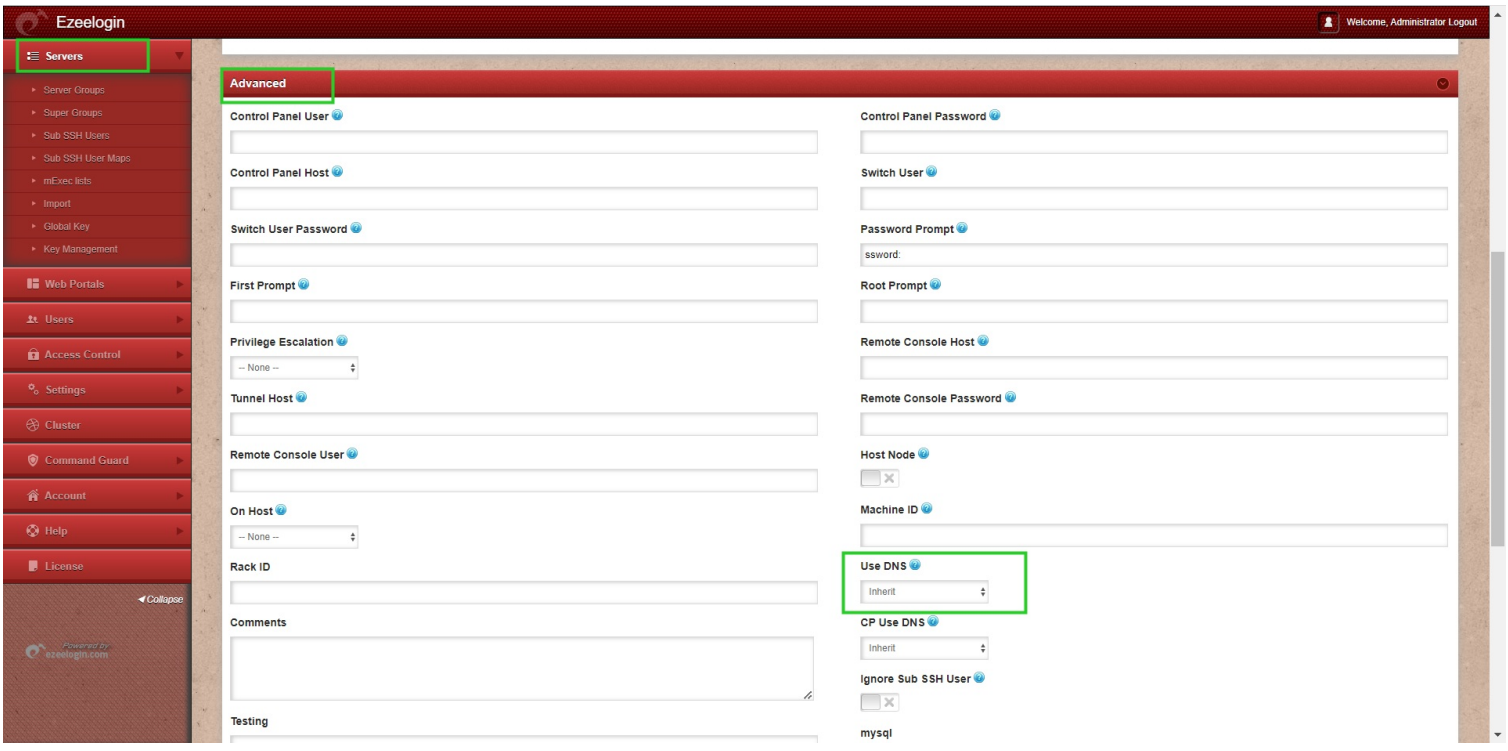

Overview: This article explains how to fix the "Cannot find host" error in Ezeelogin by modifying the Use DNS setting either per server or globally to inherit or disable DNS usage.

The error occurs if you have enabled the **Use DNS** which indicates the following.

Use DNS Server specific override for Use DNS setting.
Inherit Inherit global setting
Yes Use DNS irrespective of the global setting
No Do not use DNS irrespective of the global setting.

Step 1: From **Servers tab -> Edit Server -> Advanced section -> Change Use DNS (yes) ->(Inherit)** and try to re-login.

Step 2: To change the setting globally Go to **Setting -> General -> Miscellaneous -> Disable Use DNS** and try to re-login
