

Set SSH Key Expiry for the gateway users

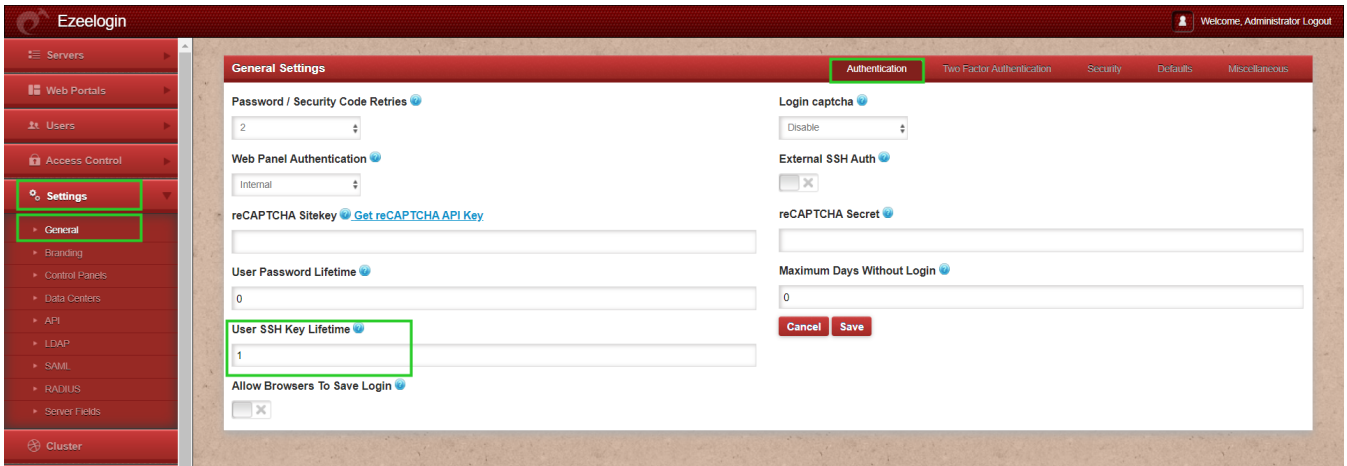

625 Rakhi April 13, 2025 [Features & Functionalities](#) 2060

How to set SSH Key Expiry for the gateway users and force to rotate the public keys?

Overview: This article helps to configure SSH key of the gateway users to expire after a specific number of days from GUI. This setting allows you to set an expiration period for SSH keys, after which the keys will no longer be valid for authentication. Users will then need to log in using a password.

Step 1: To set user SSH key lifetime, navigate to **Settings -> General -> Authentication -> Set User SSH key lifetime**. Below Screenshot says that the SSH key will expire in 1 day.

A value of 0 means that SSH keys will never expire.

Refer : [How to add ssh public key for passwordless authentication in ssh](#)

Step 2: After a designated period has passed and the key for the specified user has expired, key-based authentication for logging into ezsh will fail. However, the gateway user will still be able to login to backend(ezsh) using password authentication.

Password: |

The following is an expired SSH key, with its expiration determined by the date configured in the web GUI. When adding a key, users can view its expiration date by pressing the F2 or # key.

```
*      Authorized SSH public key

Current key :

expiry-time="20230810" ssh-rsa AAAAB3NzaC1yc2EAAAADAQAB

VfwYdN30SfeeGc= root@gateway

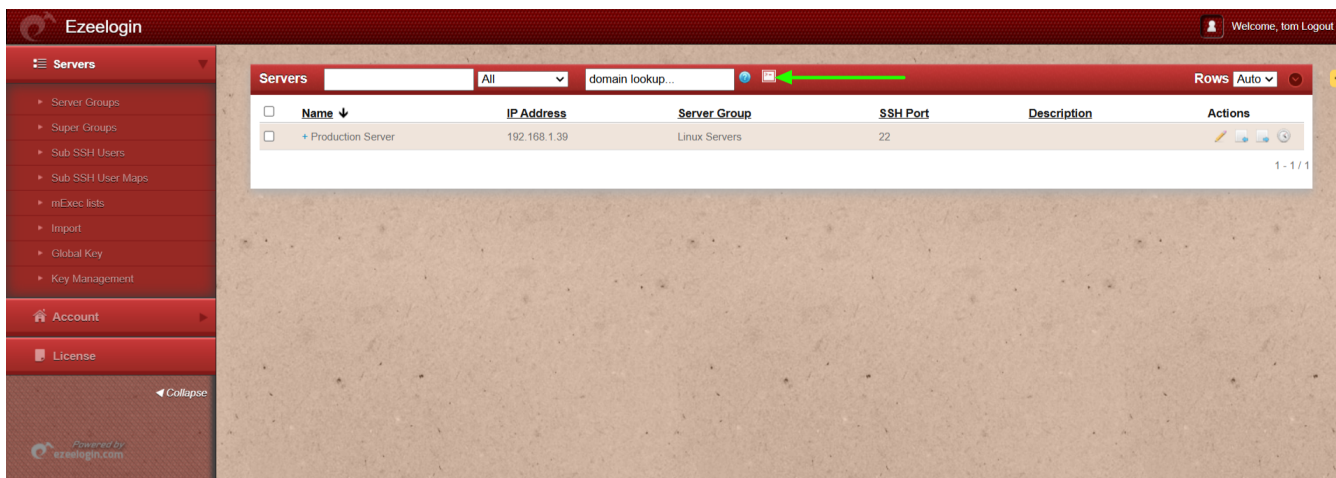

Input new key and press 'Enter':
NOTE: SSH key is local to the node. If cluster is config
ured, add the key on the other node as well.

Press Esc key to cancel...
```

SERVICES [All servers] (group) [Normal /]
Start typing string to locate. ESC: Clear search, F1/+: Help, F4/!: Exit.

How to add a new key via WebSSH if the user's existing key has expired?

Step 1: Login to web GUI as the gateway user whose SSH key has been expired and click on the [WebSSH](#) icon

Step 2: Once web ssh console is open press "F2" or "#" on your keyboard which will take you to the section where you can manage SSH public keys.

Step 3: Enter the [SSH public key](#) of the gateway user into the designated field and press "Enter" to confirm and save it. The key will then be used for authentication.

```
Linux Servers
Authorized SSH public key
No key set.
Input new key and press 'Enter':
NOTE: SSH key is local to the node. If cluster is configured, add the key on the other node as well.
ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQGDCEFL0yVrtSgGChgP+
