

# List user and subssh user mapped

647 Nesvin KN April 16, 2025 [Productivity & Efficiency Features](#) 1148

## How to list the usernames and the corresponding subssh users mapped individually?

**Overview:** This article helps to retrieve the list of gateway users and their corresponding subssh users configured in Ezeelogin.

**Step 1:** Run below command to find the [database name and table prefix](#).

```
root@gateway:~# cat /usr/local/etc/ezlogin/ez.conf | grep -i
"db_name|db_prefix"

db_name ezlogin_wupluh
db_prefix btu_
```

**Step 2:** Login to the MySQL and run the query below to list the usernames and the corresponding subssh users mapped individually from the user edit.

```
root@gateway:~# mysql -u root -p

Enter password:

mysql> use ezlogin_wupluh;

mysql> select u.username as user, s.username as sub_ssh_user from
btu_users as u join btu_ssh_users as s on u.ssh_user_id = s.id;

+-----+-----+
| user  | sub_ssh_user |
+-----+-----+
| alex  | john        |
| tony  | nick        |
+-----+-----+
2 rows in set (0.00 sec)
```

Replace the database name (**ezlogin\_wupluh**) and table prefix (**btu\_**) with your own values.

Execute the following command and provide the MySQL root password when prompted to get the list

with a single command.

```
root@gateway:~# mysql -u root -p -e "USE $(grep -oP 'db_names+KS+' /usr/local/etc/ezlogin/ez.conf);select u.username as user, s.username as sub_ssh_user from $(grep -oP 'db_prefixs+KS+' /usr/local/etc/ezlogin/ez.conf)users as u join $(grep -oP 'db_prefixs+KS+' /usr/local/etc/ezlogin/ez.conf)ssh_users as s on u.ssh_user_id = s.id;"
```

Enter password:

```
+-----+-----+
| user   | sub_ssh_user |
+-----+-----+
| alex   | john   |
| tony   | nick   |
+-----+-----+
```

---
