How to login to the gateway server as a gateway user with Bash shell?

Overview: This article describes how to log in to the gateway server as a gateway user with the Bash shell by updating user settings, modifying SSH configurations, and integrating the server in Ezeelogin.

Step 1: Add a **gateway user** from webpanel.

Step 2: **Change the shell of the gateway user** to /bin/bash.

```
root@gateway :~# chsh -s /bin/bash username

eg:  root@gateway :~# chsh -s /bin/bash alex
```

Step 3: Run the below command to **confirm the shell of the gateway user.**

```
root@gateway :~# getent passwd username | cut -d: -f7

eg:  root@gateway :~# getent passwd alex | cut -d: -f7
```

Step 4: Edit the sshd configuration file of the gateway server and **add a new port number** and **force the user to use the ezsh shell with default port 22**.

```
root@gateway :~# vim /etc/ssh/sshd_config

Port 22
Port 2233
Match LocalPort 22 User alex
  ForceCommand /usr/local/bin/ezsh

root@gateway ~]# systemctl restart sshd
```

> Refer article to assign a new port number and force to use the different shell of the Linux user.

Step 5: Add the gateway server to the Ezeelogin GUI as the remote server **with the new port number**. Refer below screenshot.

Step 6: Login to ezsh and press the tab key to **view the server details**. Refer below screenshot.

Step 7: Login to the server, and the gateway user will be **logged in with the bash shell on the gateway server**.
