## How can you include a single server in two distinct groups

**Overview:** This article describes how to give two user groups access to a single server by using a shared server group managed through a supergroup.

You can include the same server for 2 gateway users using the following steps. Here you'll be creating 2 distinct user groups for 2 gateway users or continuing with an existing one for instance. Next, generate a shared server group responsible for overseeing both gateway users and grant both users permission to access this shared server.

Step 1: Create two user groups (Under Users tab > User Groups > Click on distinct teams for instance Developer and Tester.

Refer: How to create user group

**Step 2:** Include those two users in the corresponding distinct user group.

Ezeelogin										Welcome, Administrator
<b>:</b> ≣ Servers		User	's find	All	·					Rows Auto V
■ Web Portals	×		<u>Username</u> ↓	First Name	Last Name	<u>Email</u>	Status	Expiry	User Group	Actions
t Users ▼			admin	Administrator		xfcgvhb@gmail.com	Active		Admins	👨 🥢 🍸 🗎
			evan	evan	geo	qwerftr@gmail.com	Active		Developer	<b>□</b> / 7 🗎
User Groups			mila	mira	kil	mira@gmail.com	Active		Tester	□ / T 🗎
Authentication Log										1 - 3 /

**Step 3: Create a Common Super Group** for two distinct teams.

Refer to manual: What is Super Group

**Step 4: Create a common server group** or two distinct teams.

Refer. How to add a server group

**Step 5:** Manage the supergroup members from the server group.

**Step 6:** Provide permission access to two user group members to server groups.

Now, the corresponding users Evan & Mila can log in to the common server.
