Common errors while importing servers

688 Lekshmi April 24, 2025 Common Errors & Troubleshooting 2936

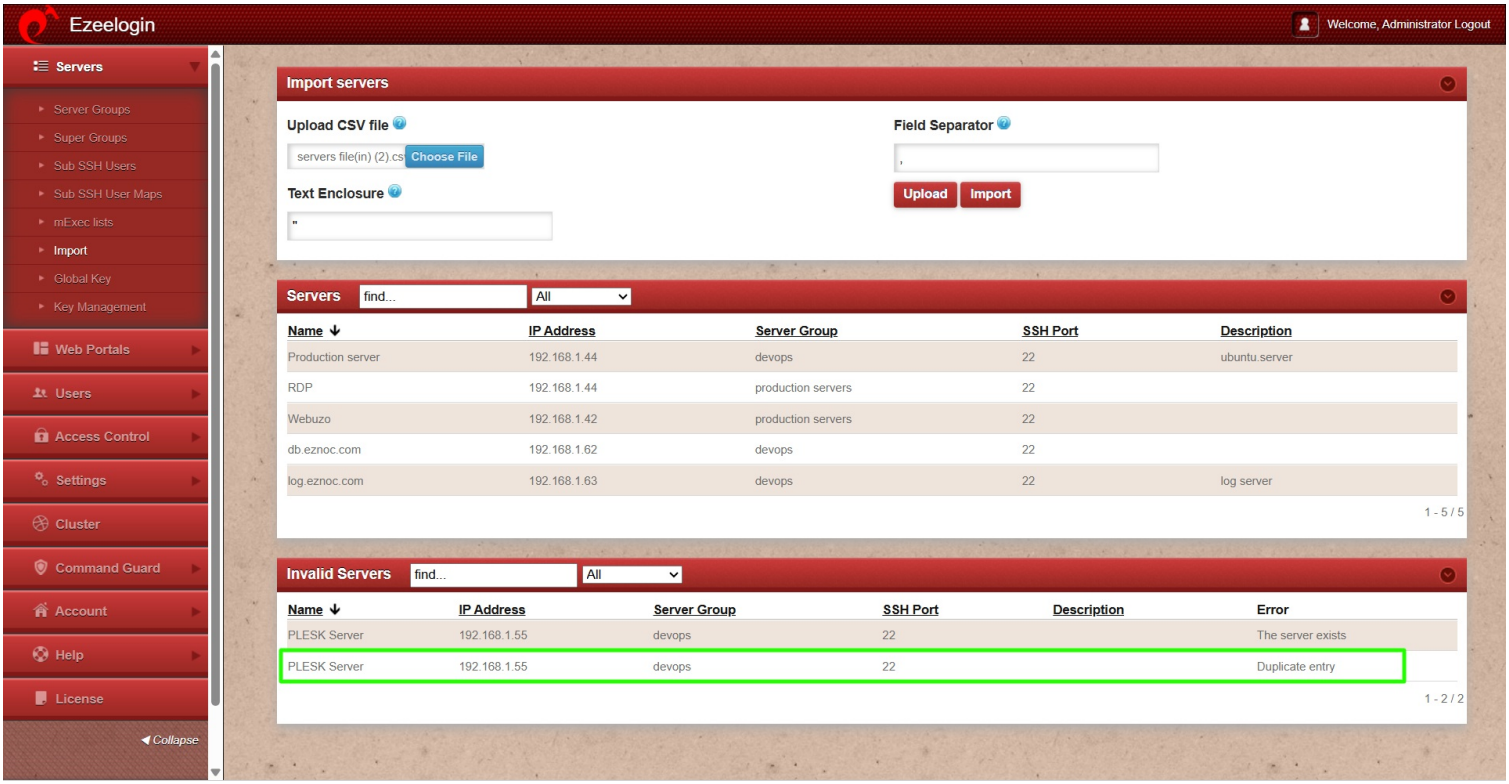

How to solve ’Server Already Exists’ and ’Duplicate Entry’ errors while importing servers?

Overview: This article explains how to resolve the "Server Already Exists" and "Duplicate Entry" errors that occur while importing servers in the web GUI.

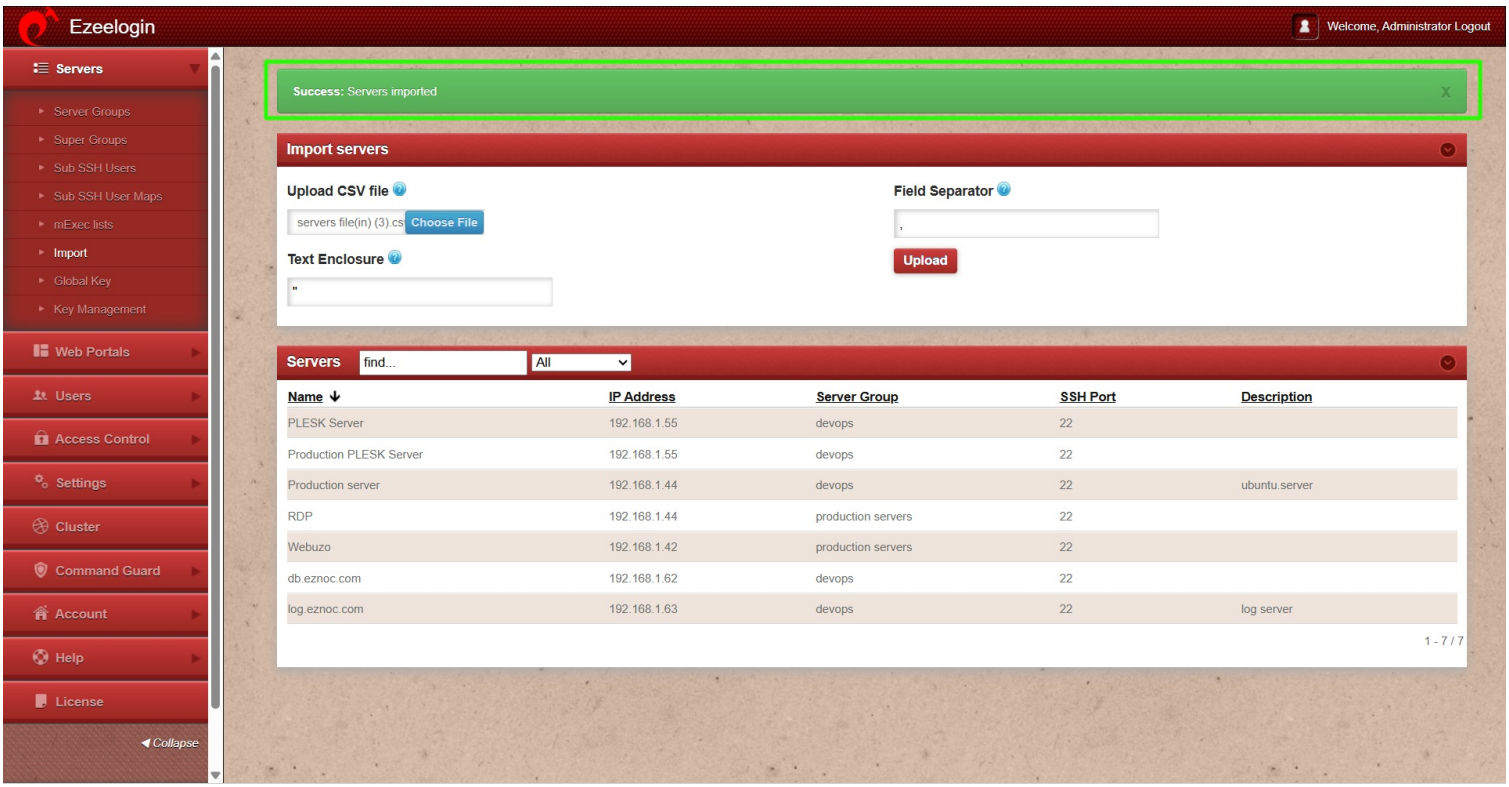

1. Encountering the "**server already exists**" error while importing a server in the web GUI indicates that the server is already present in the web GUI.

2. While trying to add a server with the same name as one that already exists can trigger a "**duplicate entry**" error in MySQL. This happens because certain columns require unique values.

To resolve the error and import the server into Ezeelogin successfully, update the hostname to a unique name that doesn't match any existing servers added in the web GUI.

In the above screenshot the name of existing server was changed to "**Production PLESK server**". After this change, another server named "**PLESK Server"** was successfully imported.
