## how to create a complete backup of ezeelogin installation? 70 admin October 2, 2024 Migration & Maintenance 9897

### How do I create a complete backup of my Ezeelogin installation?

**Overview:** The article explains how to efficiently create and restore Ezeelogin backups by skipping large log directories to speed up the process, while ensuring the proper configuration for a successful restoration.

# **Step 1:** Execute the command **/usr/local/sbin/backup\_ezlogin.php** and this would create a binary executable backup archive in **/var/ezlogin\_backup\_xx\_x.bin**.

The directory **/var/log/ezlogin** stores the user SSH sessions that are recorded. This dir could run into a huge size (1GB >) which would cause the backup script to take longer to complete (The log dir has to be tarred and then gzip'ed compressed which is time-consuming and resource intensive). In such, cases it's advisable to skip the log directory while running the backup script as follows.

root@gateway:~# /usr/local/sbin/backup\_ezlogin.php -nologs

Make sure to back up /var/log/ezlogin when you backup ezeelogin with the nologs option.

root@gateway:~# cp -pr /var/log/ezlogin /var/log/ezlogin\_backup

root@gateway:~# /usr/local/sbin/backup\_ezlogin.php

\_\_/\_\_\_\_|\_\_|\_\_/ \_\_, |\_|\_| |\_| \_/

Checking environment... done

Based on your command line arguments, you may be prompted to enter the missing settings. The default value will be given in bold. Simply pressing enter key will choose the default value. Creating directories... done 

- You may store this backup archive generated in /var/ezlogin\_backup.x.x remotely, in case you need to restore it when your primary node is unrecoverable.
- When your **primary** node goes **down**, all you need is to **migrate** the **license** to the **new IP** from the portal and **execute the backup archive** on the server and you are ready to go.

**Step 2:** To restore Ezeelogin, simply execute the archive created.

# root@gateway:~# /var/ezlogin\_backup\_v7.37.10\_b381\_ p8.2.20\_Sat\_Jun\_20\_2024\_09\_02\_32\_UTC.bin Creating directory ezlogin\_backup\_v7.8.0\_b381\_Sat\_Jun\_20\_2024\_09\_10\_32\_UTC Verifying archive integrity... All good. Uncompressing Ezeelogin 7.8.0 backup (Thu\_Oct\_04\_2018\_09\_10\_32\_UTC)......

### \*\*\*\*\*

Web panel installed at:

- ' /var/www/html/ezlogin/ '
- ( http://yourdomain.com/ezlogin/ ).

\*\*\*\*\*

Note: Please check the log file to see if any error occurred.

#### TODO NOTES:

Enable web server, MySQL server and cron to startup at boot time.

For free assistance, please contact support@ezeelogin.com

Thank you for choosing Ezeelogin.

Step 2(A): Following shows the help menu for restoring Ezeelogin

```
root@gateway:~# /var/
ezlogin_backup_v7.37.11_b381_p8.2.20_Sat_Jun_29_2024_09_02_32_UTC.bin
-- -help
Creating directory
ezlogin_backup_v7.37.11_b381_p8.2.20_Sat_Jun_29_2024_09_02_32_UTC
Verifying archive integrity... 100% MD5 checksums are OK. All good.
Uncompressing Ezeelogin 7.37.11 backup (PHP 8.2.20,
Sat_Jun_29_2024_09_02_32_UTC) 100%
```

\_\_\_\_ \_\_\_\_ \_\_\_ | | \_\_\_\_ \_\_ \_(\_)\_ \_\_\_ / \_ \_ / \_ / \_ |/ \_ / \_` | | '\_\_ | \_\_// / \_\_/ \_\_/ | (\_) | (\_| | | | | | \_/\_\_\_\_|\_\_|\_\_/ \_\_\_, |\_|\_| |\_| # Ezeelogin Restore # \*\*\*\*\* Options: -help : Show this help -version : Show the version -www <path> : Path from where web server will serve the web panel files -sys <path> : Path where web panel will search for its system files -uri <path> : Request URI path to access the web panel -dbhost <host> : Specify hostname or IP address of MySQL server -dbport <port> : Specify the port MySQL server is listening on -dbsuser <username> : Specify database super (root) user name -dbspass <password> : Specify database super (root) user password -force\_https <yes/no> : Whether to force HTTPS for web panel -noauto : Prompt for options -usebin <absolute\_path> : Use the provided binary package instead of downloading -lic\_timeout <seconds> : Timeout for connecting to Ezeelogin license server. Default: 30 -proxy\_host <host> : Proxy host for connecting to Ezeelogin license server -proxy\_port <port> : Proxy port for connecting to Ezeelogin license server -proxy\_user <username> : Proxy user for connecting to Ezeelogin license server -proxy\_pass <password> : Proxy pass for connecting to Ezeelogin license server -mysql\_encrypt <yes/no> : Whether to enable secure mysql connection -mysql\_ssl\_key <absolute\_path> : Path to the private key file for secure MySQL connection -mysql\_ssl\_cert <absolute\_path> : Path to the public key certificate file for secure MySQL connection -mysql\_ssl\_ca <absolute\_path> : Path to the certificate authority file for secure MySQL connection -mysql\_ssl\_capath <absolute\_path> : Path to a directory containing trusted CA certificates for secure MySQL connection

```
-mysql_ssl_cipher <ciphers> : List of *allowed* ciphers to be used
for the encryption, separated by colons (':')
-mysql_ssl_verify <yes/no> : Whether to verify the server certificate
for secure MySQL connection
```

**Step 3:** To restore the Ezeelogin database on a different database host, specify the **DB host**, **port**, and other relevant details during the restoration process.

Here is an example of restoring Ezeelogin on a remote database. Replace **dbhost**, **dbport**, **dbuser** and **dbspasswd** with the correct values

```
root@gateway:~# sh
ezlogin_backup_v7.37.10_b381_p8.2.20_Sat_Jun_20_2024_09_02_32_UTC.bin
-- -dbhost 192.168.1.8 -dbport 3306 -dbsuser root
-dbspasswd OvJGZGfmXHrjUpM
```

**Step 4:** Follow the step below if you want to do the **restore** in **one step** with your existing settings and without being prompted. Replace the backup filename with your own backup file.

```
root@gateway:~# sh
ezlogin_backup_v7.37.10_b381_p8.2.20_Sat_Jun_20_2024_09_02_32_UTC.bin
-- -skipgeolite -auto -force -ACCEPT_SETTINGS -I_ACCEPT_EULA
```

You need to check the /var/log/ezlogin\_backup.log and /var/log/ezlogin\_restore.log to see if any errors occurred during the backup and restore process
