

# Google authenticator QR code image broken

## How to fix the broken Google authenticator secret QR code image while configuring Google 2FA in Ezeelogin?

**Overview:** This article explains how to resolve the broken Google Authenticator QR code issue in Ezeelogin caused by deprecated API, with upgrade and temporary workaround steps. The QR code generation feature experiences an impact due to the deprecation of the Google Image Charts API, resulting in the QR code not being displayed as expected.

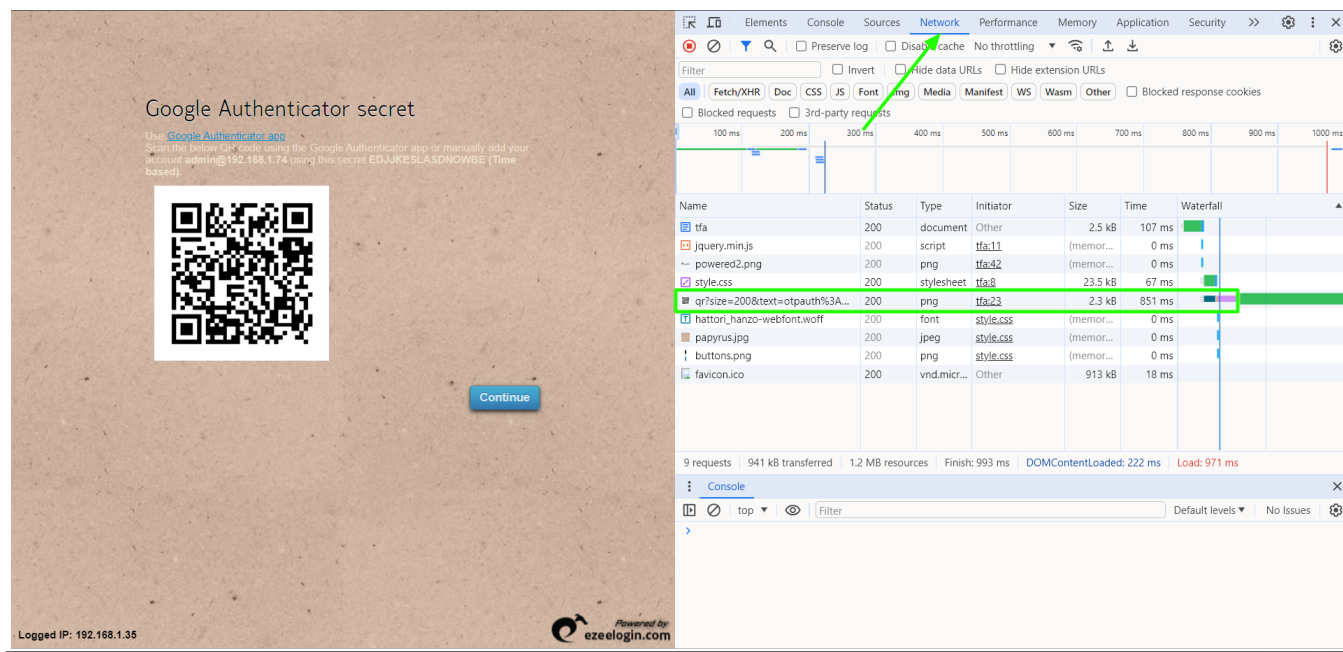

In order to fix the problem permanently, [upgrade](#) to Ezeelogin version 7.37.5 ( PHP 8.2, PHP 8.1), 7.36.3 (PHP 7.1 & above), 7.27.7 (PHP 5.6 - 7.0) or to latest version

As a temporary solution , proceed to Step 2 below to generate the Google Authenticator QR code image that can be scanned using the Google Authenticator App on your smartphones.

**Download and upgrade to the latest version of Ezeelogin compatible with the PHP version currently being run on the gateway server.**

	<a href="https://downloads.ezeelogin.com">https://downloads.ezeelogin.com</a>
	<a href="https://downloads.ezeelogin.com">https://downloads.ezeelogin.com</a>
	<a href="https://downloads.ezeelogin.com">https://downloads.ezeelogin.com</a>
	<a href="https://downloads.ezeelogin.com">https://downloads.ezeelogin.com</a>

**Step 1:** To fix the QR code display issue [upgrade Ezeelogin to version 7.37.5](#) or to latest version.

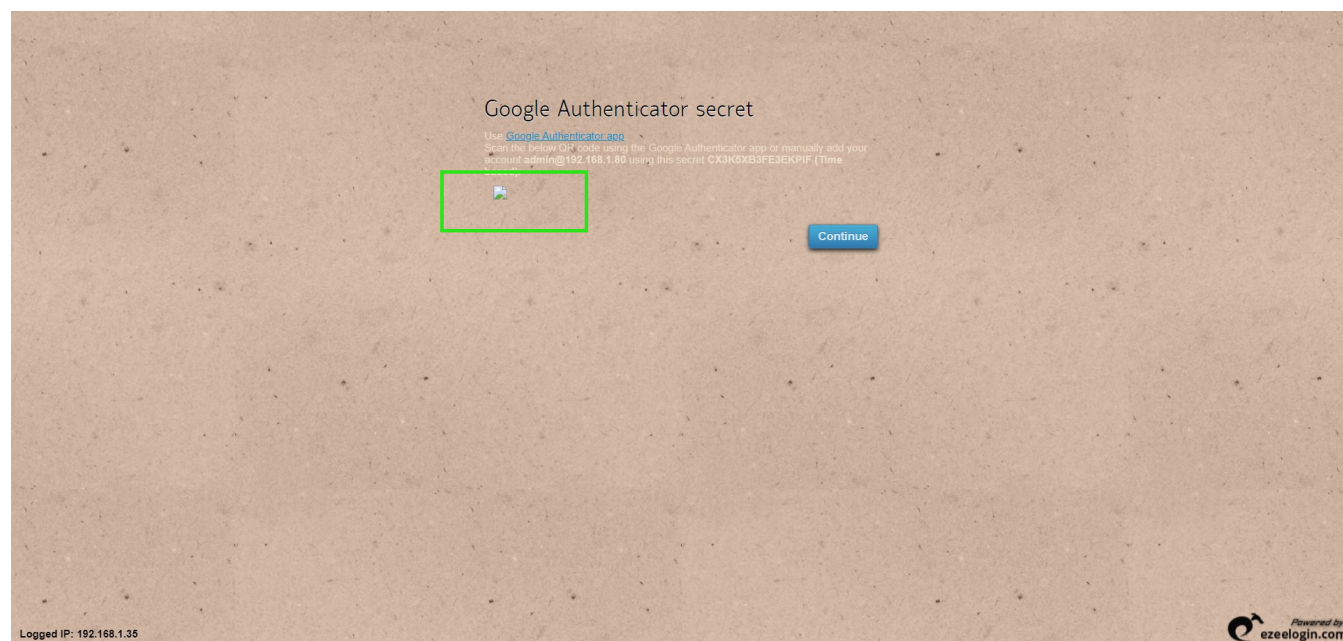

**Step 2 ( Temporary solution without out having to upgrade Ezeelogin )**
