Change the web URL / URI of Ezeelogin Installation

72 admin June 30, 2025 Tweaks & Configuration 9276

How to change the ezeelogin web URL by removing the /ezlogin suffix?

Overview: This article explains how to change the Ezeelogin web URL to eliminate the /ezlogin suffix from the end of our URL. To achieve this, modify the **uri_path**, **cookie_path**, and **www_folder** variables in the **/usr/local/etc/ezlogin/ez.conf** file, and then copy the Ezeelogin web files to the desired directory within the web server's document root.

Ezeelogin web files (blue.css common index.php themes) should be placed under the **document root** specified in the **Apache Virtual Host configuration**
www_folder in the ez.conf must match the DocumentRoot specified in your Apache virtual host configuration

To change the Ezeelogin web URL from

Example:

http://cloudweg.com/ezlogin to http://cloudweg.com

Step 1: Check the Document Root for the virtual host **cloudweg.com** in the Apache web configuration file.

```
Document Root /var/www/html/cloudweg.com/
```

Step 2: Edit **/usr/local/etc/ezlogin/ez.conf** and make the following changes. Replace the below with the correct details

```
uri_path /ezlogin
cookie_path /ezlogin
www_folder /var/www/html/ezlogin

TO

uri_path /
cookie_path /
www_folder /var/www/html/cloudweg.com/
```

Step 3: All the Ezeelogin web files need to be copied from the folder.

```
/var/www/html/ezlogin to /var/www/html/cloudweg.com

root@gateway:~# cp -r /var/www/html/ezlogin/* /var/www/html/cloudweg.com/
```

Again, if you want to access your Ezeelogin GUI as "**http://cloudweg.com/ezlogin**", Copy the ezeelogin web files from **/var/www/html/cloudweg.com/** to **/var/www/html/cloudweg.com/ezlogin/**

After copying, edit the following variable in **/usr/local/etc/ezlogin/ez.conf**

uri_path /ezlogin
cookie_path /ezlogin
www_folder /var/www/html/cloudweg.com/ezlogin

Common errors and troubleshooting:

The following error appears when accessing **https://cloudweg.com** in the browser with the wrong configuration setting in apache.

The following error appears when accessing **https://cloudweg.com/ezlogin** in the browser with the wrong configuration setting in apache.

Fix: Make sure apache configuration file has correct document root path.

Make sure document root path is either **/var/www/html/cloudweg.com**
or **/var/www/html/cloudweg.com/ezlogin**
Example configuration file if the Ezeelogin web files are in **/var/www/html/cloudweg.com**:

<VirtualHost *:80>
ServerName cloudweg.com
DocumentRoot /var/www/html/cloudweg.com
</VirtualHost>
Example configuration file if the Ezeelogin web files are in **/var/www/html/cloudweg.com/ezlogin**:

<VirtualHost *:80>
ServerName cloudweg.com
DocumentRoot /var/www/html/cloudweg.com/ezlogin
</VirtualHost>
