

Change the web URL / URI of Ezeelogin Installation

72 admin November 22, 2024 [Tweaks & Configuration](#) 7049

How to change the ezeelogin web URL by removing the /ezlogin suffix?

Overview: This article explains how to change the Ezeelogin web URL to eliminate the /ezlogin suffix from the end of our URL. To achieve this, modify the **uri_path**, **cookie_path**, and **www_folder** variables in the **/usr/local/etc/ezeelogin/ez.conf** file, and then copy the Ezeelogin web files to the desired directory within the web server's document root.

To change the Ezeelogin web URL from

Example:

```
http://mysshgateway.com/ezlogin to http://mysshgateway.com
```

Step 1: Check the Document Root for the virtual host **ezsshgateway.com** in the Apache web configuration file.

```
Document Root /home/mygate/public_html
```

Step 2: Edit **/usr/local/etc/ezeelogin/ez.conf** and make the following changes. Replace the below with the correct details

```
uri_path /ezlogin
cookie_path /ezlogin
www_folder /home/mygate/public_html/ezlogin
```

TO

```
uri_path /  
cookie_path /  
www_folder /home/mygate/public_html
```

Step 3: All the Ezeelogin web files need to be copied from the folder.

```
/home/mygate/public_html/ezlogin to /home/mygate/public_html/  
  
root@gateway:~# cp -r /home/mygate/public_html/ezlogin/*  
/home/mygate/public_html/
```

Again, if you want to access your Ezeelogin GUI as "<http://mysshgateway.com/ez>", Copy the ezeelogin web files from

/home/mygate/public_html/ezlogin to /home/mygate/public_html/ez.

After copying, edit the following variable in **/usr/local/etc/ezlogin/ez.conf**

```
uri_path /ez  
cookie_path /ez  
www_folder /home/mygate/public_html/ez
```
