How to integrate SIEM with Ezeelogin?

Overview: This article describes on how to integrate SIEM with Ezeelogin.

Security Information and Event Management (SIEM) is a crucial technology that helps organizations manage their security posture by collecting, analyzing, and correlating data from various sources in real time. SIEM systems provide comprehensive visibility into security events and incidents, enabling organizations to detect threats early and respond effectively. By aggregating logs and alerts from across the IT infrastructure, SIEM enhances threat detection, simplifies compliance reporting, and facilitates incident response, making it an essential tool for maintaining a strong security framework.

1. Integrate Ezeelogin with Splunk
