How to enable/disable Recursive Delete Protection?

Overview: This article guides you on how to enable or disable Recursive Delete Protection. Recursive Delete Protection is a security feature in Ezeelogin that helps prevent accidental execution of destructive commands such as **rm -rf /**, which could lead to significant data loss. This feature is enabled by default to safeguard critical system files.

Step 1: Login to web GUI, navigate to **Settings** -> **General** -> **Security** -> **Enable/Disable Recursive Delete Protection**

Step 2: Enabling recursive delete protection ensures that the gateway user is blocked from executing common dangerous commands like **rm -rf /**
