Managing and Deleting Log Entries from Database

803 Lekshmi November 4, 2025 Features & Functionalities 1678

Remove old and unused log data

Overview: This article explains how to manage and delete log entries from various Ezeelogin database tables such as authlogs, serveractivity_logs, gwactivity_logs, and webactivity_logs. It also covers how to manage SSH log rotation and pruning logs recorded in the database to free up space and maintain optimal performance.

Detailed articles on deleting entries from Ezeelogin MySQL database tables:

1. Deleting entries from mysql database table authlogs

2. Deleting entries in the mysql database table serveractivity_logs

3. Deleting entries in the mysql database table gwactivity_logs

4. Deleting entries from mysql database table webactivity_logs

5. How to truncate the ssh session logs recorded
