key_read: uudecode ssh user cant login with ssh key

83 admin October 2, 2024 Common Errors & Troubleshooting 18594

User can't log in with their SSH key and I'm getting this error in /var/log/secure

Overview: This article explains how to resolve SSH login issues by updating a user's public key, either through the backend of gateway server or by manually editing the authorized_keys file on the gateway server.

Make sure that your public key is not corrupted. Try generating a new public key and paste it into the backend.

Refer to the following article to update the SSH gateway user public key.

> SSH authentication key

Alternatively, you can update the public key by ssh'ing into the gateway server and pasting the public key in **/home/user/.ssh/authorized_keys**
