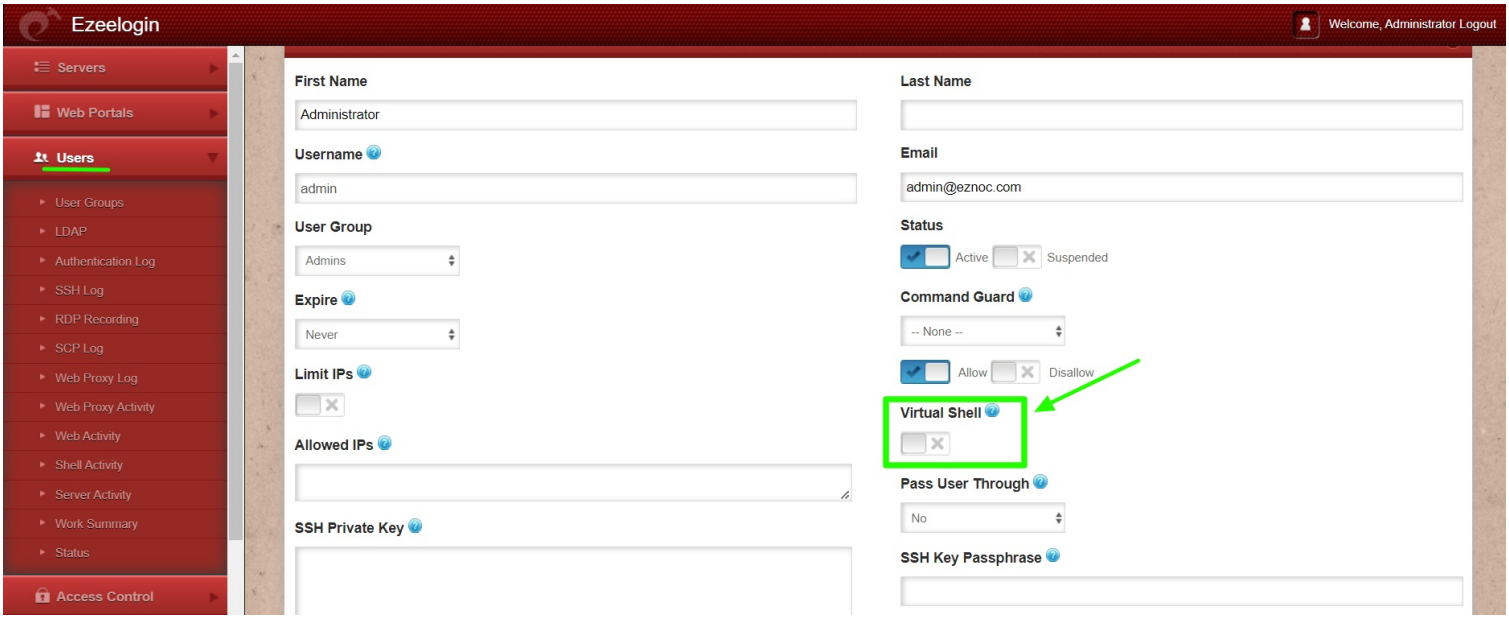
How to resolve the issue of slow SSH sessions when the virtual shell is enabled?

Overview: This article helps gateway users in disabling the virtual shell feature, which can cause slowness to SSH sessions.

Step 1: To disable virtual shell for a user, navigate to **Users** -> **Edit user** -> **disable Virtual shell.**



Step 2: Enabling "**Virutal shell**" will provide the user with only a non-interactive shell that just lets gateway users to execute commands on the remote server (similar to parallel shell) with complete **command guard filtering** capabilities.

This way, you can ensure smoother SSH sessions by disabling the virtual shell feature.

> Virtual shell is an experimental feature. This feature will bring slowness to the SSH sessions and interactive activities such as file editors, top, etc. will not work as in a regular shell.
